Appendix 4: Key Activities
1. INTRODUCTION

Fortescue Metals Group (Fortescue) is an integrated business comprised of mine, rail and port operations based in the Pilbara region of Western Australia, with its head office located in Perth.

Detailed background information regarding the timing and nature of Fortescue’s environmental approvals under the Environmental Protection Act 1986 (WA), the Environment Protection and Biodiversity Conservation Act 1999 (Cth), current operations and plans for future expansion is contained in Appendix 1.

1.1 Requirement for Management Plan

The Groundwater Management Plan (this Plan) is required as part of development approval for Fortescue’s Iron Ore related infrastructure in the Pilbara under Ministerial Statements 707.

Existing projects and future developments will be required to prepare and implement site-specific Groundwater Management Programs to give effect to this Plan or where required a Groundwater Operating Strategy in accordance with a licence issued under the Rights in Water and Irrigation Act 1914.

Guidance to develop Groundwater Operating Strategies is available in Operational policy 5.08: Use of operating strategies in the water licensing process (Department of Water).

The data flow diagram for this Plan is available in Appendix 2.

1.2 Objective and Scope

The objective of this Plan is to minimise direct and indirect impacts of Fortescue’s groundwater management activities on groundwater quality and quantity in Fortescue Controlled Sites. Groundwater management activities include groundwater investigations, groundwater monitoring, the construction and operation of infrastructure for purpose of groundwater abstraction (supply and use), dewatering/depressurisation and excess water disposal.

This Plan was initially developed to meet the requirements of Condition 9 of Ministerial Statements 707 but is intended to provide guidance on groundwater management across all Fortescue Controlled Sites. The sections of this Plan which address these conditions are identified in Appendix 3.

This Plan will replace the Chichester Operations Groundwater and Bore Management Plan (45-PL-EN-0005) and the Groundwater Discharge Management Plan (45-PL-EN-0019).

1 Fortescue Controlled Sites are sites under the legislative control of Fortescue including exploration sites, sites under construction, operational sites (sites managed and operated by Fortescue and sites managed by Fortescue but operated by contractors) and the Perth offices.
1.3 Legislation and Regulatory Framework

Fortescue employees and contractors are obliged to comply with all relevant environmental Commonwealth and State legislation. There is a range of legislation that relates to groundwater in Western Australia (Table 1).

Table 1: Commonwealth and State Legislation Relating to Groundwater

<table>
<thead>
<tr>
<th>Legislation</th>
<th>Application</th>
</tr>
</thead>
<tbody>
<tr>
<td>Aboriginal Heritage Act 1972</td>
<td>Provides protection of Aboriginal Heritage Sites. Requires a Section 18 approval under the Act to disturb a registered Aboriginal Heritage Site.</td>
</tr>
<tr>
<td>Environmental Protection Act 1986 (WA)</td>
<td>Prevention, control and abatement or pollution and conservation protection and enhancement of the environment.</td>
</tr>
<tr>
<td>Environment Protection and Biodiversity Conservation Act 1999 (Cth)</td>
<td>Protection of environmental matters of national significance such as national heritage sites, wetlands of international importance, nationally threatened species, ecological communities and migratory species.</td>
</tr>
<tr>
<td>Rights in Water and Irrigation Act 1914 (WA)</td>
<td>Relates to rights in water resources, to make provision for the regulation, management, use and protection of water resources, to provide for irrigation schemes, and for related purposes. Requires proponents to obtain a license under section 5C and 26D of the Act.</td>
</tr>
</tbody>
</table>

Table 2 outlines the legislative approvals required to undertake groundwater management activities and construct supporting infrastructure.

The following standards and guidelines are also of relevance to this Plan:

- Department of Mines and Petroleum and Office of Environmental Protection Authority (2011). Guidelines for Preparing a Mine Closure Plan
- Department of Mines and Petroleum (2002), Guidelines for the Protection of Surface and Groundwater Resources During Exploration Drilling
- Department of Water 2009, Operational policy 5.12 Hydrogeological reporting associated with a groundwater well licence
- Department of Water 2010, Operational policy 1.01 Managed Aquifer Recharge in Western Australia
- Department of Water 2011, Operational policy 5.08 Use of Operating Strategies in the Water Licensing Process
- Department of Water 2009, Pilbara Water in Mining Guidelines.

| Licence to Take Water (Section 5C)      | Any activity which involves the taking of water from a watercourse, wetland or underground source. These activities may include, but are not limited to:  
  - General camp purposes  
  - Dust suppression  
  - Construction purposes  
  - Dewatering. | Rights in Water and Irrigation Act 1914                                   | DoW                                           |
| Native Vegetation Clearing Permit       | Required when clearing native vegetation in an ‘environmentally sensitive area’ (e.g. Threatened Ecological Communities). | Environmental Protection Act 1986               | Department of Environment Regulation (DER) |
| Works Approval                          | Construction of premises prescribed under Schedules 1 and 2 of the Environmental Protection Regulations 1987. In relation to this Plan a prescribed premises is classified as mine dewatering at a production or design capacity greater than 50,000 tonnes per year. | Environmental Protection Act 1986               | DER                                           |
| Operating Licence/Registration          | Operation of prescribed facilities and activities under Schedules 1 and 2 of the Environmental Protection Regulations 1987. In relation to this Plan a prescribed activity is classified as mine dewatering at a production or design capacity greater than 50,000 tonnes per year. | Environmental Protection Act 1986               | DER                                           |
1.4 Internal Management Plans and Procedures

The following Fortescue documents are also of relevance to this Plan:

- Chemical and Hydrocarbon Management Plan (100-PL-EN-0011)
- Chichester Operations Fauna Management Plan (45-PL-EN-0007)
- Christmas Creek Water Management Scheme Fauna Management Plan (CC-PL-EN-0003)
- Conservation Significant Fauna Management Plan (100-PL-EN-0022)
- Dewatering Discharge Contingency Procedure (M-PR-EN-0001)
- Environmental Consequence Descriptors Matrix (100-MX-EN-0001)
- Exploration Environmental Management Plan (E-PL-EN-0002)
- Fortescue Marshes Management Plan (45-PL-EN-0009)
- Ground Disturbance Permits Procedure (100-PR-EN-0004)
- Incident Event Management Procedure (100-PR-SA-0011)
- Rail Construction Environmental Management Plan (R-PL-EN-0015)
- Rail Corridor: Fauna Management Plan (R-PL-EN-0017)
- Railway Corridor: Subterranean Fauna Management Plan (R-PL-EN-0009)
- Rehabilitation and Revegetation Management Plan (45-PL-EN-0023)
- Significant Flora and Vegetation Management Plan (45-PL-EN-0017)
- Significant Flora and Vegetation Monitoring Guidelines (45-GU-EN-0001)
- Site specific Groundwater Operating Strategies as approved by the Department of Water
- Solomon Fauna Management Plan (45-PL-EN-0027)
- Stakeholder Consultation Reinjection Management Plan (CC-PL-EN-0006)
- Subterranean Fauna Survey Plan (45-PL-EN-0010)
- Surface Water Management Plan (45-PL-EN-0024)
- Vegetation Clearing and Topsoil Management Procedure (45-PR-EN-0013)
- Vegetation Health Monitoring and Management Plan –Cloudbreak (CB-PL-EN-0019)
- Vegetation Health Monitoring and Management Plan –Christmas Creek (CC-PL-EN-0004).
2. ROLES AND RESPONSIBILITIES

All Fortescue employees and contractors are required to comply with the requirements of this Plan.

Accountability for fulfilling the requirements of this Plan is dependent on the stage of project development (construction, operations, decommissioning) and the project type (port, rail or mine).

During exploration and design, the Group Manager Technical Services and the Group Manager Resource Geology will be accountable for ensuring the requirements of this Plan are met.

During construction and operations stages, whether activities are undertaken by an external service provider or internal Fortescue personnel, the Project Director or the General Manager (Port, Rail or Mine) will be accountable for ensuring the requirements of this Plan are met.

During decommissioning and closure stages, the General Manager (Port, Rail or Mine) will be accountable for ensuring the requirements of this GMP are met.

Where responsibilities are delegated, this must be clearly recorded and communicated.

In Section 6 specific Management Actions have been attributed to the appropriate personnel.

When site specific groundwater management programs and operating strategies are developed to support this Plan, the RASCI framework should be utilised to delegate roles, responsibilities, and review and approval levels. RASCI is used to denote:

- **R-Responsible**: Those who do the work to achieve the task.
- **A-Accountable**: Those who are ultimately accountable for the completion of the deliverable or task and the one to whom the Responsible person is accountable.
- **S-Supportive**: Resources allocated to the Responsible person and who will also assist in completing the task.
- **C-Consulted**: Those whose opinions are sought, two-way communication.
- **I-Informed**: Those whom are kept informed, one-way communication.
3. STAKEHOLDER CONSULTATION

Fortescue has undertaken an extensive stakeholder consultation program whereby landowners, regulators and other relevant parties have been consulted with regard to investigation and design of the mine sites and rail infrastructure through the environmental approvals process (see Section 7 in Environ 2005a, and Section 6 in Environ 2005b, Section 6 in Fortescue Metals Group, 2010).

The Department of Environment Regulation (DER) was consulted and approved the final content of the original Chichester Operations and Bore Management Plan (45-PL-EN-0005).

This plan will be submitted to the Office of the Environmental Protection Authority (OEPA) in accordance with condition 9 of Ministerial Statement 707.
4. **KEY ENVIRONMENTAL ACTIVITIES**

Many of the groundwater management activities\(^3\) associated with Fortescue’s exploration, construction, operation and decommissioning phases have the potential to impact on the environment.

The key groundwater management activities undertaken by Fortescue which have the potential to impact on groundwater and groundwater dependent ecosystems are described in Appendix 4 and include:

- Vegetation clearing
- Ground disturbance
- Groundwater drilling and bore construction and testing
- Construction and establishment of groundwater management infrastructure
- Groundwater management activities
- Groundwater injection.

\(^3\) Fortescue uses the term ‘activities’ to refer to ‘Environmental Aspects’ as defined by ISO14001.
5. POTENTIAL ENVIRONMENTAL IMPACTS

The potential direct and indirect impacts to groundwater and groundwater dependent ecosystems arising from Fortescue’s groundwater management activities are presented in Table 3.

Table 3: Potential Environmental Impacts Arising from Fortescue’s Activities

<table>
<thead>
<tr>
<th>Potential Environmental Impact</th>
<th>Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>Groundwater contamination</td>
<td>Contamination of groundwater from release of hydrocarbons and chemicals during groundwater management activities. Spills can continue to impact on groundwater quality if not properly remediated. Impact local and regional groundwater quality through changes to the hydrogeological regime (such as saline intrusion), transfer and injection of contaminated groundwater and exposure of groundwater to evapo-concentration and other geochemical processes (such as pit lakes)</td>
</tr>
<tr>
<td>Effects on phreatophytic vegetation</td>
<td>Expose vegetation to waterlogging, where elevated watertables intersect vegetation root systems. In waterlogged soils biological activity rapidly uses the available oxygen, retarding oxygen and water uptake and restricting root and plant growth. Elevated water levels also have the potential to transport and/or concentrate salts in soil profiles. Interfere with the availability of water in the soil profile accessible to phreatophytic vegetation.</td>
</tr>
<tr>
<td>Loss of stygofauna/ fauna habitat</td>
<td>Lowering the water table sufficiently can dry out the zone which some subterranean species live. A change in water quality can impact upon stygofauna species. Impact volume of flow into groundwater fed pools through reduction of flow and uncontrolled increase in flow from discharge of dewater close to pools.</td>
</tr>
<tr>
<td>Soil erosion</td>
<td>Erosion can result in modified soil infiltration characteristics.</td>
</tr>
<tr>
<td>Turbidity</td>
<td>Localised increase in turbidity resulting from dewatering and ground disturbance activities.</td>
</tr>
</tbody>
</table>
6. ENVIRONMENTAL MANAGEMENT

A series of environmental management objectives have been developed to mitigate environmental impacts on groundwater and groundwater dependent ecosystems that could potentially be caused by Fortescue’s groundwater management activities during exploration, construction, operation and decommissioning phases. These are:

1. Minimise the potential environmental impacts associated with the development of groundwater management infrastructure.
2. Minimise the potential environmental impacts associated with groundwater management activities.
3. Minimise the potential impacts to phreatophytic vegetation and any other groundwater-dependent ecosystems.
4. Minimise the potential impacts to station bore supply within the area of groundwater drawdown.
5. Monitor and report sufficiently to demonstrate compliance and enable management to make informed decisions that minimise environmental impacts to groundwater dependent ecological systems.

For each objective, management actions have been developed to ensure the impacts from Fortescue’s activities are managed, and that appropriate monitoring, reporting and corrective action functions are implemented to support the successful implementation of the management actions.

The key elements of the environmental management process associated with each objective are described in Table 4.

<table>

Construction (Implement) - Manager Projects  
Operation, Decommissioning and Closure (Implement- Mine) - Manager Operational Projects/ Manager Mine Services/ Manager Technical Services or HSE Manager (Solomon)  
Operation, Decommissioning and Closure (Implement- Port and Rail) - HSE Manager |
| 5.2       | Comply with the reporting requirements outlined in an approval, licence or works approval issued under the Environmental Protection Act 1986; an approval under the Environment Protection and Biodiversity Conservation Act 1999 and a license issued under the Rights in Water and Irrigation Act 1914. Reporting under a 5C Licence issued under the Rights in Water and Irrigation Act 1914 should be in accordance with Operational policy no. 5.12 Hydrogeological reporting associated with a groundwater well licence (DoW). | - Reporting requirements fulfilled  
- Compliance with the approval/license/works approval conditions | - Compliance Document  
- Annual Environmental Reports (may include Compliance Assessment Report, Annual Environmental Monitoring Report)  
Reporting under Environmental Protection Act 1986/Environment Protection and Biodiversity Conservation Act 1999 - Manager Environmental Approvals/ Manager Environment Governance and Sustainability |
7. AUDIT

Fortescue ensures compliance with its legal obligations through first party quality assurance by site environment teams with a focus on effective environmental management through the corporate Environmental Management System (EMS).

Fortescue has adopted a risk based approach to monitor compliance with its legal obligations. Site environment teams will monitor their compliance with this Plan and the required site specific management and monitoring programs using the Self-Verification of High Risk Environmental Legal Obligations Guideline (100-GU-EN-0030). Corporate environment teams will monitor business-wide compliance with this Plan through EMS Management Reviews (100-PR-EN-1014).

Where non-conformance issues or opportunities for improvement are identified these will be documented and tracked via the Business Management System (BMS).
8. REVIEW

It is important that plans and procedures are frequently reviewed and revised as Fortescue’s operations change and opportunities for improved management practices are identified.

This Plan will be reviewed every five years, or when significant additional information comes to hand. Upon review, the document will be revised where appropriate and the revision status will be updated in accordance with Fortescue’s Document Governance Standard (100-ST-DC-0002).

Appendix 1: Project Background
Fortescue Metals Group Background

Fortescue Metals Group (Fortescue) is an integrated business comprised of mine, rail and port operations based in the Pilbara region of Western Australia with its head office located in Perth.

Fortescue has commenced operation of the Pilbara Iron Ore and Infrastructure Project (the Project), which consists of several iron ore mines and associated rail and port infrastructure in the Pilbara region of Western Australia.

The Project was granted Major Project Facilitation Status in December 2004 and Fortescue has signed two Agreements with the State of Western Australia:

- *The Railway and Port (The Pilbara Infrastructure Pty Ltd) State Agreement* for the port and rail infrastructure to transport ore from the mines to the port
- *The Iron Ore (FMG Chichester Pty Ltd) Agreement* for the iron ore mines.

The Project has been developed in the following stages:

- Stage A, consisting of a two-berth iron ore export facility at Port Hedland and a north-south railway from the central Pilbara to Port Hedland, approved under Ministerial Statement 690
- Stage B, consisting of iron ore mines in the eastern Pilbara (Christmas Creek) and an east-west spur rail line connecting to the Stage A railway; approved under Ministerial Statement 707. (Note this approval included the Mindy Mindy mine site but this has not been developed to date)
- Cloudbreak iron ore mine west of the Christmas Creek area, approved under Ministerial Statement 721 and federal approval under the EPBC Act (EPBC 2005/2205)
- Port facility upgrade consisting of a third berth at Anderson Point, Port Hedland, approved under Ministerial Statement 771
- Port Facility upgrade of a fourth berth at Anderson Point, Port Hedland, Not Assessed - Public Advice Given in 2010
- Solomon iron ore project consisting of two new mines and a railway connecting to the existing Fortescue rail line, approved under Ministerial Statement 862 and federal approval under the *EPBC Act* (EPBC 2010/5567 and 2010/5513) in 2011
- Additional rail infrastructure between Herb Elliot Port Facility and Cloudbreak Mine Site, approved under Ministerial Statement 690 and 707 and federal approval under the EPBC Act (EPBC 2010/5513)
- Christmas Creek water management scheme to increase the mine dewatering rate and to inject surplus water into two brackish and one saline injection zones, approved under Ministerial Statement 871
- Cloudbreak Life of Mine, approved under Ministerial Statement 899 (supersedes the conditions of Ministerial Statement 721)
• Northstar Hematite Project, Not Assessed - Public Advice Given in 2012 and federal approval under the EPBC Act (EPBC 2012/6530).

Changes to Ministerial Statements 690, 707, 721 and 771 were made and approved under Section 45 or 46 of the *Environmental Protection Act 1986 (EP Act)*.

Fortescue is extending its current operations in the Pilbara by developing the Solomon Project, which includes two new mine sites (Firetail and Kings), and a rail line to support the new sites. The Solomon Project area (Solomon) is located approximately 60 kilometres (km) north of Tom Price and is situated on both sides of the rail line operated by Pilbara Iron (Rio Tinto). Access to Solomon is via the public roads running north of Tom Price and also from the Pilbara Iron rail access road.

In addition to the Solomon project, expansion of mining to the west is proposed within the Western Hub Project area which contains approximately 10 ore bodies. Expansion of mining is also proposed east of Solomon at Nyidinghu and north east at North Star.

Fortescue is also conducting drilling programmes to further delineate resources and iron ore reserves within tenements surrounding Solomon and in additional locations throughout the Pilbara.

In addition to its wholly owned tenements, Fortescue is party to joint ventures and agreements with other tenement holders within the Pilbara region and is the manager of iron ore exploration operations upon these tenements.

Appendix 4: Key Activities
<table>
<thead>
<tr>
<th>Key Activities</th>
<th>Description</th>
</tr>
</thead>
</table>
| Vegetation clearing | Causing substantial damage to native vegetation. This includes:  
  - the killing or removing of native vegetation  
  - the severing or ringbarking of trunks or stems  
  - the draining or flooding of the land  
  - the burning of vegetation  
  - the grazing of stock  
  - any other activity that kills or damages native vegetation.  
  A guide to clearing permits under the *Environmental Protection Act 1986*.  
  The definition includes all types of native vegetation, including those found in aquatic and marine environments. It includes all native grasses, shrubs and trees but does not include intentionally sown native vegetation. |
| Ground disturbance | Disturbance of the topsoil or surface rock layer of the ground, or a waterway, by machinery in the course of grading, excavating, digging, dredging or deep ripping.  
  Includes:  
  - Top soil removal  
  - Growth medium recovery  
  - Earthworks. |
| Water Bore Drilling | Drilling for water. |
| Construction/ establishment of infrastructure | Construction and establishment of groundwater management infrastructure |
| Construction/ establishment of linear infrastructure | Construction and completion of linear groundwater management infrastructure |
| Groundwater abstraction and distribution | Removal of ground water from underground aquifer. |
| Groundwater injection | Re-injection of previously abstracted groundwater to underground aquifer. |
