**Proponent's Environmental Offsets Package
January 2006**

PILBARA IRON ORE & INFRASTRUCTURE PROJECT CLOUDBREAK

Assessment No. 1577

This Offsets Package applies to the Existing Mine as shown in Figure 1 and delineated by co-ordinates listed in Table 3 of Schedule 3.

Note: The Cloudbreak Iron Ore mine is located in the same region as the previously assessed Stage B proposal, and the offsets package which has been developed for the Cloudbreak proposal is therefore linked to the offsets for Stage B (Assessment Number 1520). In addition, the development of the offsets package for Cloudbreak is to complement that which has already been developed for Stage B.

No.	Topic	Commitment	Details
1.	Land Acquisition	The proponent will provide adequate funds to DEC within three years following the commencement of mine operations, to enable the purchase of lands, including the area nominated for conservation in the 2015 pastoral lease and extensions to the Fortescue Marshes Reserve systems, for addition to the conservation estate.	In recognition of the conservation importance of the Fortescue Marshes to the State of Western Australia and the potential for this area to be listed as a Ramsar wetland in the future, the proponent has committed to providing resources to DEC to enable them to acquire land, to contribute to a net conservation benefit outcome. The area nominated for exclusion from the 2015 pastoral lease negotiations for early inclusion into the conservation estate will form a priority acquisition, followed by extensions to the Fortescue Marshes reserve system (or other pastoral areas of high conservation value if extensions to the Fortescue Marshes reserve system are not achievable). The proponent will provide the funds to DEC which are to be held in a trust fund and used to purchase lands for addition to the conservation estate. While negotiations for the areas to be purchased will be undertaken by DEC, the proponent is to be consulted as to the proposed areas to be purchased (the proponent's views will not be binding on DEC, but DEC will give those views due consideration).
2.	Research Projects	The proponent will commence discussions with DEC and Academic Advisors to plan for the scope of the research projects prior to commencement of construction. The proponent will begin providing funding to commence the research programs within One year following commencing construction of the project.	Outlined below is the range of research projects associated with the Cloudbreak Offsets: • research into the Night Parrot; • research into the Bilby; and • research into improving understanding of local conservation values, and could include short range endemic invertebrates, fire ecology of <i>Acacia xiphophylla</i> or samphires. Fauna surveys for the proponent's Cloudbreak PER identified the existence of threatened species near the project area. The proponent has committed to appropriate offsets for threatened fauna as part of the Cloudbreak project. Currently, there are no established survey techniques for the Night Parrot and this will limit the ability to develop research projects for the species. The proponent will, as part of ongoing operations, continue to undertake surveys for the Night Parrot to try to establish appropriate survey techniques. However, if and when an established technique is determined to allow the safe capture, tag and release of this species, the proponent will fund an ongoing research project into the Night Parrot.

No.	Topic	Commitment	Details
			The proponent has committed to the following additional research / funding: • one research project at PhD level or equivalent, to be run consecutively for a period of at least nine years; or • a funding proposal (of similar cost to a PhD Project) which contributes to knowledge / research for the Night Parrot. The Research Project / Funding Proposal will be developed in consultation with DEC, Commonwealth Department of Sustainability, Environment, Water, Population and Communities (DSEWPC) and Academic Advisors through the following collaborative process. • Desktop review of all current research in the Pilbara area, relevant to the potential impacts of the Cloudbreak Project, concerning Night Parrot. • Discussions with DEC / DSEWPC regarding research which requires further work / funding or possible new areas of research / funding, to better understand and manage the impacts of mine infrastructure on the Night Parrot. • Consultation with DEC / DSEWPC to select an appropriate area of research / funding to be pursued. If a PhD Project is proposed, the following process will then also be undertaken. • Initiate discussions with DEC, DSEWPC, Academic Advisors and Experts in the field of study selected in order to scope the Research Project further. • Develop a Scoping Document describing the potential methods, timing and deliverables for the Research Project. • Select a study team or individual to carry out the work, provide adequate resourcing, technical support; academic and/or expert advice and set a start date for the research. The proponent will also develop an integrated research program aimed at further understanding and protecting the Bilby. This will include the following research projects: • one research project at PhD thesis level or equivalent will be conducted consecutively for a period of nine years; or • a funding proposal (of similar cost to a PhD Project) which contributes to knowledge/research on the Bilby. Commencement of the research program will occur once construction is complete and will be reviewed every three years, in consultation between the proponent, DEC and Academic Advisors. The scope of research to be undertaken will be developed in collaboration with DEC through the following process.

			• Desktop review of all current research in the Pilbara area, relevant to impacts of the Cloudbreak Project, concerning the Bilby. • Discussions with DEC regarding research which requires further work or possible new areas of research. • Consultation with DEC to select appropriate areas of research to be pursued, but would consider their current numbers, distribution range, populations trends and pressures on current populations. • Initiate discussions with Academic Advisors and Experts in the fields of study selected in order to scope the Research Program further. • Develop a Scoping Document describing the potential methods, timing and deliverables for the Research Program. • Select a study team or individual to carry out various components of the work, provide adequate resourcing, technical support, academic and/or expert advice and set a start date for the research. The above process to scope the nine year research effort will commence at the outset of Project construction. The proponent will also develop an integrated research program aimed at further understanding and the local conservation values of the Fortescue Marshes. This will include: • one research project at PhD thesis level or equivalent to be conducted consecutively for a period of nine years; or • a funding proposal (of similar cost to a PhD Project) which contributes to knowledge/research for the conservation values of the Fortescue Marshes. The scope of research to be undertaken will be developed in collaboration with DEC through the following process. • Desktop review of all current research in the Pilbara area, relevant to impacts of the Cloudbreak Project, concerning the conservation values of the Fortescue Marshes focusing on short range endemic invertebrates, fire ecology or samphires. • Discussions with DEC regarding research which requires further work or possible new areas of research.
3.	Feral Animal Control Program	The proponent will provide annual funding to DEC, commencing within 12 months following the commencement of mine operations, for	The management plans which have been developed for the Night Parrot and Bilby have identified that pressures on endangered species populations includes feral predators, such as fox, cat and wild dogs, is potentially an important part of managing these species. 		the feral animal control program.	proponent's operating practices, the development of a broadscale program to control predators over a much larger area is necessary before any benefits will be registered. Therefore, in addition to funding research into the conservation of threatened fauna species, the proponent has also committed to contributing to a DEC Predator Control Program for the Fortescue Marshes area. The Project will be ongoing for the life of the project and will be scoped between the proponent's personnel, DEC and academic experts in this field. The responsibility for the management of the program will be undertaken by DEC as part of their current Pilbara regional predator control programs. This project should commence as soon as practicable after commencement of construction of the project. If it is found that there are increasing risks to threatened species from the occupation of the area by feral herbivores such as camels, horses and donkeys, the proponent and DEC will discuss the variation of the project to meet these needs.
4.	Fencing	The proponent will provide adequate funding to DEC, within three years following the commencement of mine operations, for the fencing of areas set aside for conservation in the 2015 pastoral lease negotiations. Subject to discussion with DEC, the proponent may identify strategic extensions to the fencing of the Fortescue Marshes Reserve systems.	The proponent recognises that the key pressures on threatened fauna species and native vegetation are the impacts associated with grazing activity and predators in their vicinity. While the proponent will liaise with affected landholders regarding the impacts of the project on their pastoral stations that may require the restrictions of grazing animals in certain areas, there is a broader concern regarding grazing and predator pressure on threatened fauna species. The proponent has committed to providing funding to DEC to enable them to fence areas which they have acquired through the resources provided by the proponent for conservation purposes or areas in the vicinity of the Fortescue Marshes which contributes to the best conservation outcome for DEC. The final areas to be fenced and the type of fencing will be determined between the proponent and DEC personnel. Allocation of resources to fencing can commence once the project is operational.
