1 Introduction

1.1 Project overview

The Roy Hill 1 Project has a total operating life of approximately 20 years; however the operation will be divided into two stages. The scope of the two stages is described below:

- Stage 1: construction of all infrastructure to meet the full 20 year life of mine, plus mining and processing ore from the Stage 1 Mining Area. Dewatering to provide 'dry' mining conditions in the Stage 1 area and advanced dewatering from future mining areas in Stage 2 in the southeast of the project area will supply the majority of water for operations. Additional water from opportunistic capture of rainfall will also be used to make up any shortfall. This will mean that all water requirements for Stage 1 would be sourced entirely from within the Project area and an external water supply would not be required. Saline water produced from dewatering will be disposed in an evaporation pond.
- Stage 2: mining and processing ore from the Stage 2 Mining Area and an external water supply.

1.2 Purpose of this document

This document is the Operation Environmental Management Plan (OEMP) designed for the operational phase of the Project. The OEMP provides the framework for managing environmental impacts during Stage 1 activities.

1.3 Objective

The objective of the OEMP is to minimise and, where possible, eliminate any adverse environmental impacts associated with operation of the Project. Each management plan within the OEMP describes the specific objectives for managing a specific environmental aspect.

1.4 Implementation

This plan is to be implemented on commencement of mine commissioning activities and throughout the operating life of the Project. This plan will be reviewed on a regular basis to ensure that it is current and addresses any changes in mine conditions. On completion of the Project this plan will be superseded by the Mine Closure Plan.

1.5 Relevant legal and other requirements

The legal and other requirements of the OEMP are provided below in Table 1–1, with other non-legislative requirements given in Table 1–2.

Table 1–1: Commonwealth and Western Australian legislation applicable to the OEMP.

LEGISLATION
Commonwealth
<i>Aboriginal and Torres Strait Islander Heritage Protection Act, 1984</i>
<i>Aboriginal and Torres Strait Islander Heritage Protection Regulations, 1984</i>
<i>Energy Efficiency Opportunities Act, 2006 and Regulations, 2006</i>
<i>Environment Protection and Biodiversity Conservation (EPBC) Act, 1999</i>
<i>Environment Protection and Biodiversity Conservation Regulations, 2000</i>
<i>National Greenhouse and Energy Reporting Act, 2007</i>
<i>Native Title Act, 1993</i>
Western Australia
<i>Aboriginal Heritage Act, 1972</i>
<i>Aboriginal Heritage Regulations, 1974</i>

LEGISLATION
<i>Agricultural and Related Resources Protection Act, 1976</i>
<i>Biosecurity and Agricultural Management Act, 2007</i>
<i>Bush Fire Regulations, 1954</i>
<i>Bush Fires Act, 1954</i>
<i>Conservation and Land Management Regulations, 2002</i>
<i>Conservation and Land Management, Act 1984</i>
<i>Contaminated Sites Act, 2003</i>
<i>Contaminated Sites Regulations, 2006</i>
<i>Dangerous Goods Safety (Explosives) Regulations, 2007</i>
<i>Dangerous Goods Safety (General) Regulations, 2007</i>
<i>Dangerous Goods Safety (Road and Rail Transport of Non-explosives) Regulations, 2007</i>
<i>Dangerous Goods Safety (Storage and Handling of Non-explosives) Regulations, 2007</i>
<i>Dangerous Goods Safety Act, 2004</i>
<i>Environment Protection and Biodiversity (EPBC) Act, 1999</i>
<i>Environment Protection and Biodiversity Conservation Regulations, 2000</i>
<i>Environmental Protection (Clearing of Native Vegetation) Regulations, 2004</i>
<i>Environmental Protection (Concrete Batching and Cement Product Manufacturing) Regulations, 1998</i>
<i>Environmental Protection (Rural Landfill) Regulations, 2002</i>
<i>Environmental Protection (Unauthorised Discharges) Regulations, 2004</i>

2 Operation flora management plan

The objectives, targets and strategies for flora management at the Project have been given in Table 2–1. Flora monitoring is outlined in Table 2-2, with reporting requirements in Table 2-3.

Table 2–1: Operation flora management plan.

OPERATION FLORA MANAGEMENT PLAN	
Objectives	<p>Minimise adverse impacts on the abundance, species diversity, geographic distribution and productivity of vegetation communities.</p> <p>Avoid the disturbance of any protected or listed flora species or ecological communities identified within the Project Area.</p>
Targets	<p>No clearing to occur outside approved clearing areas.</p> <p>No Declared Rare Flora (DRF), Priority flora or Threatened Ecological Communities (TEC's) are removed.</p>
Potential Flora Impacts	<p>Operation of the Project has the potential to result in the following impacts on flora species and vegetation communities within and surrounding the Project area:</p> <ul style="list-style-type: none"> • loss of threatened flora, ecological communities or native pasture rangelands; • habitat fragmentation and reduced connectivity; • degradation of vegetation communities (mulga) and flora due to mine disturbance; • loss of groundwater dependent flora/vegetation as a result of hydrogeological changes, eg drawdown; and • decline or loss in native vegetation resulting from the application of saline dust suppressants or “dust smothering” leading to decreased photosynthetic capacity.
Management Strategies	<p>Minimise clearing of vegetation.</p> <p>Use markers or flagging to delineate areas of vegetation to be cleared.</p> <p>Use GPS software in earthmoving machinery navigation to identify clearing boundaries.</p> <p>Approval required from Environmental Site Manager prior to clearing.</p> <p>Develop and implement Flora Monitoring Program.</p> <p>Develop and implement weed control/eradication measures including Weed Management Measures.</p> <p>Develop and implement Equipment Hygiene Procedures.</p> <p>Mine and road disturbance areas designed to avoid, minimise and/or mitigate impacts on pre-mining surface water flows, in particular sheetflow.</p> <p>Discharge locations have minimal potential impacts on native vegetation.</p> <p>Surface water diversions will be located, where possible, to minimise impacts on native vegetation.</p> <p>Minimise discharge of mine water to the surface.</p> <p>Implement the Flora Monitoring Program to ensure mine impacts on vegetation communities (mulga woodlands) does not exceed those predicted prior to development.</p> <p>Conduct progressive rehabilitation at the earliest opportunity.</p> <p>Implement the Flora Monitoring Program to ensure mine impacts on Groundwater Dependand Flora do not exceed those predicted prior to development.</p>

Table 2–2: Operation flora monitoring.

MONITORING	TIMING	REPORTING	TIMING	RESPONSIBILITIES
Monitoring of vegetation to identify any decline or loss of flora.	Prior to construction.	Report any significant decline or loss of flora reported using the Incident Report Form.	Annually.	Site Environmental Manager.
Monitor spread of weeds and implement eradication measures to minimise impacts.	Prior to construction.	Identification of weeds to be reported to environmental personnel using the Environmental Daybook.	As required.	All personnel.
Monitoring of susceptible vegetation to identify any decline or loss of flora.	In accordance with the Flora Monitoring Program	Report any significant decline or loss of flora using the Incident Report Form.	As required.	Site Environmental Manager.
Monitoring of the condition of groundwater dependant vegetation to identify any stressed or dead vegetation inside and outside the predicted cone of depression.	In accordance with the Flora Monitoring Program.	Quarterly Condition Report of Groundwater Dependent Vegetation.	Quarterly.	Site Environmental Manager.
		Report any significant deaths of flora outside the predicted cone of depression to the DEC and DMP (formerly DoIR).	As required.	Site Environmental Manager.
Monitoring of susceptible vegetation to identify any decline or loss of flora.	In accordance with the Flora Monitoring Program.	Report any significant decline or loss of flora using the Incident Report Form.	As required.	Site Environmental Manager.

Table 2–3: Flora reporting requirements and documents.

REPORTING REQUIREMENTS	
Procedures	Ground Disturbance Permit Procedure. Topsoil Stripping Procedure. Vegetation Clearing Procedure. Equipment Hygiene Procedure.
Programs	Flora Monitoring Program.
Reports	Annual Report. Environmental Daybook. Incident Report Form. Quarterly Condition Report of Groundwater Dependent Vegetation.

3 Operation weed management plan

The objectives, targets and strategies for weed management at the Project have been given in Table 3–1. Weed monitoring is outlined in Table 3-2 with reporting requirements in Table 3–3: Weed reporting requirements and documents..

Table 3–1: Operation weed management plan.

OPERATION WEED MANAGEMENT PLAN	
Objectives	Ensure operational activities do not result in the introduction of new weed species or spread of existing weed species within the Project area. To reduce and where possible eradicate weeds within the Project area.
Targets	No new weed species are introduced into the Project area. Existing weed infestations are reduced and where possible eliminated within the Project area.
Potential Weed Impacts	The operational activities associated with the Project have the potential to: <ul style="list-style-type: none"> introduce or spread weeds within the Project area; and cause a loss in biodiversity resulting in ecosystem simplification.
Management Strategies	Develop and implement weed control/eradication measures including a Weed Management Procedure and Weed Management Program. Approval required from Environmental Site Manager prior to clearing. Site induction includes a requirement to notify the Environment Team of any weed infestations. Weed identification posters prepared and displayed around the site listing weed species and control methods. Develop and implement the Equipment Hygiene Procedure including vehicle washdown bays and management of washdown waste. Develop and implement Topsoil Management Procedures to limit the spread of known weed species and retain soil quality Weed infestations identified in the baseline survey are removed or controlled as part of the Weed Management Program. New weed infestations are identified and included in the Weed Management Program.

Table 3–2: Operation weed monitoring.

MONITORING	TIMING	REPORTING	TIMING	RESPONSIBILITIES
Inspection of known weed locations and to identify any new outbreaks.	Monthly.	Effectiveness of weed control/eradication measures to be reviewed annually and included in the Project Annual Report	Annually.	Site Environmental Manager.
Site inspection to determine that posters are still on display and contain relevant information.	Monthly.	Not applicable.	Not applicable.	Area Superintendent.
Inspections to ensure compliance with the Equipment Hygiene Procedure.	Monthly.	Non-compliance with the Equipment Hygiene Procedure reported using the Environmental Daybook.	As required.	Area Superintendent.
Inspection of topsoil stockpiles to ensure all efforts are made to retain soil properties.	Monthly.	Non-compliance with the Topsoil Management Procedure reported using the Environmental Daybook.	As required.	Area Superintendent.

Table 3–3: Weed reporting requirements and documents.

REPORTING REQUIREMENTS	
Procedures	Equipment Hygiene Procedure. Weed Management Procedure. Vegetation Clearing Procedure. Topsoil Stripping Procedure.
Programs	Weed Management Program
Reports	Annual Report. Environmental Daybook. Incident Report Form.

This page has been left blank intentionally

4 Operation fauna management plan

The objectives, targets and strategies for fauna management at the Project have been given in Table 4–1. Fauna monitoring is outlined in Table 4-2, with reporting requirements in Table 4-3.

Table 4–1: Operation fauna management plan.

OPERATION FAUNA MANAGEMENT PLAN	
Objectives	<p>Avoid disturbance of any protected or listed fauna which use or are present within the Project area.</p> <p>Minimise adverse impacts on terrestrial fauna abundance, diversity, geographic distribution and productivity at a species and ecosystem level.</p>
Targets	<p>No clearing to occur outside approved clearing areas.</p> <p>No net loss of rare or priority fauna habitat.</p>
Potential Fauna Impacts	<p>Operation of the Project has the potential to result in the following impacts on fauna species within and surrounding the Project area:</p> <ul style="list-style-type: none"> • loss of fauna due to habitat fragmentation and reduced connectivity; • direct loss of native fauna and/or stock from Project-related traffic (vehicle/train strike) and excavations; • loss of groundwater dependent fauna as a result of hydrogeological changes, eg drawdown; • disturbance of native fauna and/or stock from Project related noise, dust and uncontrolled fires; • reduction in stock carrying capacity and access to watering points; • increased feral animal presence; and • adverse behavioural changes to migratory birds and other nocturnal fauna as a result of Project lighting.
Management Strategies	<p>Minimise disturbance to native fauna habitat.</p> <p>Salvage native fauna habitat features during clearing for later placement on rehabilitated areas.</p> <p>Relocate fauna, if warranted.</p> <p>Progressively revegetate disturbance areas using local species that provide habitat that suits local native fauna.</p> <p>Trench open time to be minimised and trenches to contain adequate egress ramps.</p> <p>All drilling holes covered to prevent injury or death to fauna.</p> <p>Set and enforce vehicle speed limits on Project roads.</p> <p>Any injuries or fatalities to native fauna reported to the Environmental Team.</p> <p>No native fauna is to be captured or intentionally killed onsite.</p> <p>Avoid the use of barbed wire on site to protect native fauna.</p> <p>Evaporation pond to be fenced to protect native fauna and stock.</p> <p>Egress matting to be installed at intervals in all water storage areas, eg turkey's nests.</p> <p>Groundwater abstraction to be minimised consistent with dewatering requirements.</p> <p>Minimise area affected by groundwater drawdown, eg staged pits.</p> <p>Implement Subterranean Fauna Management Program.</p> <p>Provide alternative watering points for stock.</p> <p>Implement Artificial Light Management Plan.</p> <p>Monthly inspection to identify any signs of feral animals on site and staff to report sightings of feral animals.</p> <p>Implement Feral Animal Management Program.</p> <p>All wastes disposed in containers with secure lids and seals.</p>

Table 4–2: Operation fauna monitoring.

MONITORING	TIMING	REPORTING	TIMING	RESPONSIBILITIES
Site inspection to determine if all clearing is in accordance with the Vegetation Clearing Procedure.	Weekly.	Clearing outside of approved areas is to be recorded using the Incident Report Form.	As required.	Clearing Foreman.
		Clearing outside of approved areas is reported to the DEC and DMP (formerly DoIR).	As required.	Site Environmental Manager.
Mine design reviewed to ensure it avoids the disturbance of significant habitat features, where possible.	Prior to the approval of mine disturbance areas.	Clearing outside of approved areas is to be recorded using the Incident Report Form.	As required.	Clearing Foreman.
		Clearing outside of approved areas is reported to the DEC and DMP (formerly DoIR).	As required.	Site Environmental Manager.
Species Specific Fauna Relocation Program to be developed should relocation be required.	According to Species Specific Fauna Relocation Program.	Description of any species relocation included in the Project Annual Report.	Annually.	Site Environmental Manager.
Inspection of rehabilitation areas to identify any issues (eg erosion, feral animal impacts etc).	In accordance with the Rehabilitation Procedure and Feral Animal Management Program.	Effectiveness of rehabilitation to be reviewed annually and included in the Project Annual Report.	Annually.	Site Environmental Manager.
Significant species monitored according to the Species Specific Fauna Monitoring Program.	According to Species Specific Fauna Monitoring Program.	Description of fauna monitoring programs included in the Project Annual Report.	Annually.	Site Environmental Manager.
Surveys/sampling to determine trends in species diversity and population status of terrestrial fauna.	Annually.	Effectiveness of fauna management measures to be reviewed annually and included in the Project Annual Report.	Annually.	Site Environmental Manager.
Trenches inspected to ensure adequate egress ramps are provided.	Daily	Any fauna deaths associated with surface water storages to be reported using the Environmental Daybook.	As required.	Area Superintendent.
Inspection of random drill holes to assess if they are correctly covered.	Quarterly.	Inadequately covered holes reported to the Drilling Superintendent using the Environmental Daybook.	As required.	Drilling Superintendent.
Speed “traps” set up at random times to catch speeding vehicles.	Randomly selected (approximately twice per year).	Speeding drivers reported, fined/disciplined.	As required.	Site Safety Manager.
Inspect site periodically to assess compliance.	Monthly.	Report any use of barbed wire to Site Environmental Manager.	As required.	All personnel.
Inspection of fences to determine their integrity.	Quarterly.	Fence repair requirements to be reported using the Environmental Daybook.	As required.	Area Superintendent
Inspection of water storage areas for fauna deaths and condition of egress matting.	Daily.	Any fauna deaths associated with trenches to be reported using the Environmental Daybook.	As required.	Area Superintendent.

MONITORING	TIMING	REPORTING	TIMING	RESPONSIBILITIES
Recording groundwater levels in accordance with Groundwater Monitoring Program.	In accordance with Groundwater Monitoring Program.	Monthly groundwater abstraction recorded in the sites groundwater register.	Monthly.	Site Environmental Manager.
		Immediately contact DoW if drawdown exceeds acceptable levels.	As required.	Site Environmental Manager.
Water quality at alternative stock water points is monitored in accordance with the Surface Water Monitoring Program to ensure it is safe for stock.	In accordance with the Surface Water Monitoring Program.	Exceedance of stock water quality guidelines reported to the stock owner	As required.	Site Environmental Manager.
		Exceedance of stock water quality guidelines reported to the DoW.	As required.	Site Environmental Manager.
Inspections in accordance with the Light Monitoring Program.	In accordance with the Light Monitoring Program.	Outcomes of the Light Monitoring Program included in the Project's Annual Report.	Annually.	Site Environmental Manager.
Inspection of mine site, camp site(s) and rehabilitation areas in accordance with the Feral Animal Management Program to identify any feral animals.	In accordance with the Feral Animal Management Program.	Not applicable.	Not applicable.	Area Superintendent
In accordance with the Feral Animal Management Program.	In accordance with the Feral Animal Management Program.	Outcomes of the Feral Animal Management Program included in the Project Annual Report.	Annually.	Site Environmental Manager.
In accordance with the Waste Management Plan.	In accordance with the Waste Management Plan.	Not applicable.	Not applicable.	Not applicable.

Table 4–3: Fauna reporting requirements and documents.

REPORTING REQUIREMENTS	
Plans	Operation Dust Management Plan. Operation Fire Management Plan. Operation Artificial Light Management Plan. Operation Noise Management Plan.
Procedures	Groundwater Monitoring Procedure. Rehabilitation Procedure. Subterranean Fauna Monitoring Procedure. Vegetation Clearing Procedure.
Programs	Feral Animal Management Program. Groundwater Monitoring Program. Light Monitoring Program. Species Specific Fauna Monitoring Program. Species Specific Fauna Relocation Program. Subterranean Fauna Management Program. Surface Water Monitoring Program.
Reports	Annual Report. Environmental Daybook. Incident Report Form.

5 Operation soil and landscape management plan

The objectives, targets and strategies for soil and landscape management at the Project have been given in Table 5–1. Monitoring is outlined in Table 5-2, with reporting requirements in Table 5-3.

Table 5–1: Operation soil and landscape management plan.

OPERATION SOIL AND LANDSCAPE MANAGEMENT PLAN	
Objectives	<p>Maintain ecological integrity of the soil and maximise seed bank viability to contribute to regeneration of flora diversity.</p> <p>Stabilise the landscape to prevent erosion and mitigate potential for weed establishment.</p> <p>Ensure, as far as practicable, that rehabilitation achieves a long term safe, stable and functioning landform which is consistent with the surrounding landscape and other environmental values.</p> <p>Meet closure commitments and legal liabilities.</p>
Targets	<p>No clearing to occur outside approved clearing areas.</p> <p>No significant erosion from soil stockpiles.</p>
Potential Soil and Landscape Impacts	<p>Operation of the Project has the potential to result in the following impacts associated with management of soil and landform within and surrounding the Project area:</p> <ul style="list-style-type: none"> • introduction and/or spread weeds; • greater susceptibility to erosion forces; • reduction in biodiversity; • increased sediment load in surface runoff; • increased dust emissions; • destruction of habitat; and • breach of closure commitments and failure to satisfy legal requirements
Management Strategies	<p>Refer to the Operation Management Plans for weeds, surface water, dust, chemicals and hydrocarbons.</p> <p>All vehicles will remain within designated roads and park only in allocated areas.</p> <p>If required, application of binding materials (ie dust suppressants) to topsoil stockpiles to prevent erosion.</p> <p>Regular inspections of topsoil stockpiles for evidence of water erosion.</p> <p>Topsoil stockpiles should be paddock dumped to heights not greater than three metres.</p> <p>Approval required from the Site Environment Manager prior to the commencement of any clearing activities (minimise clearing of vegetation).</p> <p>Implement staged clearing and rehabilitation, where topsoil is used as soon as is practicably possible; ideally progressive rehabilitation will be used in preference to temporarily stockpiling topsoil.</p> <p>Areas requiring topsoil stripping will be clearly demarcated in site plans prior to the clearing of any vegetation.</p> <p>Design, construct, rehabilitate and monitor mine landforms so that they meet agreed mine closure objectives (eg they are stable, revegetated with local species, minimise visual impacts, and have final shapes that are compatible with the surrounding natural topography).</p>

Table 5–2: Operation soil and landscape monitoring.

MONITORING	TIMING	REPORTING	TIMING	RESPONSIBILITIES
Inspection of rehabilitation areas to identify any weed outbreaks.	Monthly.	Effectiveness of weed control/eradication measures to be reviewed annually and included in the Project Annual Report.	Annually.	Site Environmental Manager.
Inspect erosion and sediment control structures to ensure that they are functioning correctly.	Monthly.	Any damage diversion systems reported to the Area Superintendent.	As required.	Area Superintendent.
Monitoring of dust levels at selected Project roads, office buildings, Project campsites and sensitive residences in accordance with the Dust Monitoring Program.	In accordance with the Dust Monitoring Program.	Dust reported in accordance with the National Environment Protection Measure for Ambient Air Quality (Air NEPM).	In accordance with the Air NEPM.	Site Environmental Manager.
Site inspection to determine that all clearing is approved and in accordance with the Vegetation Clearing Procedure.	Weekly.	Clearing outside of approved areas is to be recorded using the Incident Report Form.	As required.	Clearing Foreman.
		Clearing outside of approved areas is reported to the DEC and DMP (formerly DoIR).	As required.	Site Environmental Manager.
Inspection of vehicle parking areas to ensure all vehicles are parked within designated areas.	Weekly.	Not applicable.	Not applicable.	Area Superintendent.
Topsoil stockpiles inspected for evidence of wind erosion.	Monthly.	Not applicable.	Not applicable.	Area Superintendent.
Topsoil stockpiles inspected for evidence of water erosion.	Monthly.	Not applicable.	Not applicable.	Area Superintendent.
Topsoil stockpiles inspected to ensure they are established correctly.	On establishment of a new stockpile.	Evidence of incorrect stockpiling reported to the Area Superintendent using the Environmental Daybook.	As required.	Site Environmental Manager.
Site inspected prior to clearing and identified habitat components identified and relocated to rehabilitation areas in accordance with the Vegetation Clearing Procedure.	Prior to clearing.	Clearing outside of approved areas is to be recorded using the Incident Report Form.	As required.	Clearing Foreman.
		Clearing outside of approved areas to be reported to the DEC and DMP (formerly DoIR).	As required.	Site Environmental Manager.
Inspections to ensure that topsoil has been correctly stockpiles, or used in rehabilitation.	Following topsoil stripping.	Inappropriate storage or use of topsoil is to be recorded using the Environmental Daybook.	As required.	Area Superintendent.
		Total cleared areas, volume of topsoil removed and total area rehabilitated to be included in the Project Annual Report.	Annually.	Site Environmental Manager.
Prior to clearing mine design is reviewed to ensure it clearly demarcates areas where topsoil is to be stripped.	Prior to clearing approval.	Clearing outside of approved areas to be recorded using the Incident Report Form.	As required.	Clearing Foreman.
		Clearing outside of approved areas to be reported to the DEC and DMP (formerly DoIR).	As required.	Site Environmental Manager.

MONITORING	TIMING	REPORTING	TIMING	RESPONSIBILITIES
Rehabilitation areas inspected to identify vegetation condition, weed infestations, feral animals, and erosion.	Monthly.	Effectiveness of rehabilitation undertaken to be reviewed annually and included in the Project Annual Report.	Annually.	Site Environmental Manager.
Minimise the time between clearing and rehabilitation/stabilisation.	At all times	Areas cleared and rehabilitated are summarised in the Project Annual Report.	Annually.	Site Environmental Manager.
Site inspected prior to clearing to identify habitat components for relocation to rehabilitation areas.	Prior to clearing.	Clearing outside of approved areas to be recorded using the Incident Report Form.	As required.	Clearing Foreman.
		Clearing outside of approved areas to be reported to the DEC and DMP (formerly DoIR).	As required.	Site Environmental Manager.
Soil disturbance and rehabilitation areas to be inspected to ensure any weed infestations are controlled and eliminated where possible.	Monthly.	Effectiveness of weed control/eradication measures to be reviewed annually and included in the Project Annual Report.	Annually.	Site Environmental Manager.
Inspections to ensure that topsoil has been correctly stockpiled, or used in rehabilitation.	Following topsoil stripping.	Inappropriate storage or use of topsoil is to be recorded using the Environmental Daybook.	As required.	Area Superintendent
		Total cleared areas, volume of topsoil removed and total area rehabilitated to be included in the Project Annual Report.	Annually.	Site Environmental Manager.
Establish and monitor indicators for the required completion criteria.	Annually.	Effectiveness of site rehabilitation to be reviewed annually and included in the Project Annual Report.	Annually.	Site Environmental Manager.
Inspection of operation areas to ensure any chemical spills have been dealt with according to the Chemical Spill Procedure and Hydrocarbon Spill Procedure.	Monthly.	Spills/leaks of hydrocarbons or chemicals (including explosives and Acid Mine Drainage (AMD)) are to be recorded using the Incident Report Form.	As required.	Area Superintendent.
		Reportable spills/leaks are reported to the DoW within 24 hours.	Within 24 hours of a reportable incident.	Site Environmental Manager.

6 Operation surface water management plan

The objectives, targets and strategies for surface water management at the Project have been given in Table 6–1. Monitoring is outlined in Table 6-2, with reporting requirements in Table 6-3.

Table 6–1: Operation surface water management plan.

OPERATION SURFACE WATER MANAGEMENT PLAN	
Objectives	<p>Maintain the quantity of water to protect the environmental values of the existing environment.</p> <p>Manage surface water resources so that their beneficial uses are not compromised.</p> <p>Location and design of infrastructure to avoid, where possible, detrimental changes to hydrology.</p> <p>Treat potentially contaminated surface water before it leaves the Project boundary.</p> <p>Maintain the integrity, ecological functions and environmental values of the Fortescue Marsh (the Marsh).</p>
Targets	<p>No significant change in surface water quality.</p> <p>No change in ecological functions and environmental values of the Marsh as a result of the mining operations.</p>
Potential Surface Water Impacts	<p>Operation of the Project has the potential to result in the following impacts to surface water within and surrounding the Project area:</p> <ul style="list-style-type: none"> • reduction in the volume of surface water flowing into the local catchment due to creeks and sheetflows being intercepted by open pits; • changes to surface water flow paths, velocities, water quality and mechanisms as a result of ground disturbance near mine landforms and infrastructure (including temporary diversion of creeks that cross mineralised areas, dewatering, realignment of Marble Bar Road and longer term post-closure landforms); • degradation (including changes in water balance) of downslope watercourses and the Marsh due to an increase in water erosion and sedimentation as a result of to land clearing and creek diversions; and • contamination of surface water by hydrocarbons, explosives, chemicals and AMD.
Management Strategies	<p>Implement measures to reduce alterations in sheet flow and downstream sedimentation regimes from pits and infrastructure (levee banks and culverts).</p> <p>Develop and implement the Surface Water Monitoring Program and Surface Water Sampling Procedure consistent with the DoW guideline for mine site water quality monitoring.</p> <p>Design, install and manage surface water diversion structures that enable non-contaminated water to be directed around disturbance areas.</p> <p>Design, install and manage surface water diversion structures that enable potentially contaminated water to be treated.</p> <p>Potentially contaminated stormwater within the Project area to be harvested and used for mining activities, where appropriate.</p> <p>Install erosion and sediment control structures downstream of disturbance areas and design final mine landforms to be stable.</p> <p>Where surface water is present, vegetation removal on adjacent areas of relief will be delayed as long as is practicably possible to avoid erosion and sedimentation.</p> <p>Refer to the Operation Chemical Management Plan and Operation Hydrocarbon Management Plan.</p>

Table 6–2: Operation surface water monitoring.

MONITORING	TIMING	REPORTING	TIMING	RESPONSIBILITIES
Design infrastructure to minimise impacts to sheetflow.	Prior to construction.	Documented in annual Project report.	As required.	Project Manager.
Water quality sampling will be undertaken to determine compliance with the DoW guidelines.	In accordance with the Surface Water Monitoring Program.	Exceedances of the DoW guidelines will be reported to the DoW.	Within one week.	Site Environmental Manager.
		A summary of the results from the water monitoring program are included in the Project's Annual Report.	Annually.	Site Environmental Manager.
All diversion systems to be inspected following heavy rainfall events to identify damage to the system.	Following significant rainfall events.	Damage to diversion systems are reported to the Area Superintendent.	As required.	All Personnel
Inspect erosion and sediment control structures to ensure that they are functioning correctly.	Monthly.	Damage to diversion systems reported to the Area Superintendent.	As required.	All Personnel
Inspect rehabilitation areas for erosion damage.	Following rainfall events.	Damage to diversion systems reported to the Area Superintendent.	As required.	All Personnel
In accordance with Integrated Water Management.	As required.	Report non-compliance using the Environmental Daybook.	As required.	Area Superintendent
Inspection of operation areas to ensure any chemical spills have been dealt with according to the Chemical Spill Procedure and Hydrocarbon Spill Procedure.	Monthly.	Spills/leaks of hydrocarbons or chemicals (including explosives and AMD) are to be recorded using the Incident Report Form.	As required.	Area Superintendent
		Reportable spills/leaks are reported to the DoW within 24 hours.	Within 24 hours of a reportable incident.	Site Environmental Manager.
		Incident report sent to the DoW within seven days.		
Inspection to be conducted periodically to ensure compliance.	Monthly.	Non-compliance to be documented and reported to Site Environmental Manager.	Within 24 hours of reportable incident.	Area Superintendent.

7 Operation groundwater management plan

The objectives, targets and strategies for groundwater management at the Project have been given in Table 7-1. Monitoring is outlined in Table 7-2, with reporting requirements in Table 7-3.

Table 7-1: Operation groundwater management plan.

OPERATION GROUNDWATER MANAGEMENT PLAN	
Objectives	<p>The beneficial uses of groundwater resources are not compromised during operation and post-closure;</p> <p>Compliance with DoW Groundwater Licences;</p> <p>Minimise impact of groundwater abstraction on dependant flora, fauna and stock watering bores; and</p> <p>Ensure changes to groundwater quality and flows (hydrogeology) do not adversely impact on the Marsh.</p>
Targets	Compliance with all DoW groundwater licence;
Potential Groundwater Impacts	<p>Operation of the Project has the potential to result in the following impacts to groundwater within and surrounding the Project area:</p> <ul style="list-style-type: none"> • Localised drawdown near active pits and Project water supply extends below the pre-mining water table, impacting on groundwater dependant vegetation, subterranean fauna and stock watering bores; • Contamination of groundwater by hydrocarbons, explosives, chemicals and AMD.
Management Strategies	<ul style="list-style-type: none"> • Implement the Dewatering Strategy to intercept the movement of saline water from the Marsh and deeper parts of the aquifer. • Implement the Integrated Water Management Plan. • Limit any dewatering to the minimum required to safely mine mineralised areas below the pre-mining water table. • Maximise water use efficiency and use water obtained from mine dewatering and surface water diversion structures. • Maintain groundwater abstraction to ensure compliance with DoW groundwater licences. • All pits to be backfilled to above groundwater levels. • All drilling holes covered to prevent contamination. • Consider options for the disposal of groundwater to minimise the movement of highly saline water from the Marsh and the deeper parts of the aquifer. • Refer to the Chemical Management Plan and Hydrocarbon Management Plan.

Table 7–2: Operation groundwater monitoring.

MONITORING	TIMING	REPORTING	TIMING	RESPONSIBILITIES
Monitoring of groundwater levels at strategically located bores in accordance with the Groundwater Monitoring Program and Groundwater Sampling Procedure.	In accordance with the Groundwater Monitoring Program.	All groundwater sampling recorded in the Groundwater Monitoring Register.	In accordance with the Groundwater Monitoring Program.	Site Environmental Manager.
		Reporting to the DoW in accordance with groundwater licence conditions.	In accordance with groundwater licence conditions.	Site Environmental Manager.

8 Operation general waste management plan

The objectives, targets and strategies for waste management at the Project have been given in Table 8–1. Monitoring is outlined in Table 8–2, with reporting requirements in Table 8-3.

Table 8–1: Operation waste management plan.

OPERATION WASTE MANAGEMENT PLAN	
Objectives	<p>Ensure general waste (industrial, inert, recyclable and putrescible waste) is effectively contained and does not interact with the surrounding environment.</p> <p>Apply principles of waste minimisation through careful product selection, reuse and recycling.</p> <p>Waste management practices and procedures meet industry standards and satisfy statutory requirements.</p>
Targets	All waste is either recycled or removed off site to the Shire of East Pilbara waste disposal facility.
Potential Waste Impacts	<p>Operation of the Project has the potential to result in the following impacts associated with waste management within and surrounding the Project area:</p> <ul style="list-style-type: none"> contamination of the surrounding environment; detrimental effects on human health; pest species attracted to the Project area; decline in air quality; and decline visual amenity.
Management Strategies	<p>Apply the waste management hierarchy (ie elimination, reduction, reuse, recycling, treatment and disposal) into Project design.</p> <p>Where waste cannot be reused or recycled it will be removed off site to the Shire of East Pilbara waste disposal facility.</p> <p>Chemical, hydrocarbon and other hazardous material will be transported offsite to an appropriate waste disposal facility</p> <p>Inform staff and contractors of waste management strategies and commitments (training and induction).</p> <p>Bins will have secure lids to prevent fauna access and wind-blown litter.</p> <p>No littering permitted.</p>

Table 8–2: Operation waste monitoring.

MONITORING	TIMING	REPORTING	TIMING	RESPONSIBILITIES
Inspection of waste disposal facilities (bins).	Monthly.	Record waste generation statistics in the Site Waste Register.	Monthly.	Area Superintendent.
Inspection of recycling facilities to determine that no waste is inappropriately disposed.	Monthly.	Record waste generation statistics in the Site Waste Register.	Monthly.	Area Superintendent.
Inspection of waste disposal facilities to determine that no waste is inappropriately disposed.	Monthly.	All DEC Controlled Waste Disposal Records are filed and stored for three years.	Ongoing.	Area Superintendent.
All staff completed the environmental induction.	Prior to commencing site work.	Not applicable.	Not applicable.	Site Environmental Manager.
Inspection of operation and infrastructure areas to identify any litter.	Weekly.	Not applicable.	Not applicable.	Area Superintendent.

9 Operation chemical management plan

The objectives, targets and strategies for chemical management at the Project have been given in Table 9–1. Monitoring is outlined in Table 9–2, with reporting requirements in Table 9–3.

Table 9–1: Operation chemical management plan.

OPERATION CHEMICAL MANAGEMENT PLAN	
Objectives	<p>Prevent the transport, storage and use of chemicals at the Project from contaminating soil, groundwater and/or surface water.</p> <p>Prevent the storage and use of chemicals at the Project from damaging flora and fauna on or surrounding the Project area.</p> <p>Ensure chemical leaks or spills are cleaned up and any necessary site remediation is undertaken.</p>
Targets	<p>All chemicals are stored, used and disposed of correctly.</p> <p>No chemicals contamination of soil, groundwater and/or surface water.</p>
Potential Chemical Impacts	<p>Operation of the Project has the potential to result in the following impacts associated with chemical management within and surrounding the Project area:</p> <ul style="list-style-type: none"> contamination of soil, surface water and groundwater; and loss of habitat, native flora and fauna (including subterranean fauna) and/or stock from exposure to chemicals, explosives and AMD.
Management Strategies	<p>All chemicals to be correctly stored.</p> <p>All spills/leaks to be cleaned up in accordance with the Chemical Spill Procedure.</p> <p>Groundwater tested in accordance with the Groundwater Monitoring Program to identify any evidence of contamination.</p> <p>All chemically contaminated material is disposed of in accordance with the Chemical Spill Procedure</p> <p>Ongoing monitoring of flora in accordance with the Flora Monitoring Program to identify any impacts of chemical leaks or spills.</p> <p>Ongoing monitoring of fauna in accordance with the Species Specific Fauna Monitoring Program to identify any impacts of chemical leaks or spills.</p> <p>Ongoing monitoring of alternative stock watering points in accordance with the Surface Water Monitoring Program.</p>

Table 9–2: Operation chemical monitoring.

MONITORING	TIMING	REPORTING	TIMING	RESPONSIBILITIES
Inspection of operational areas to ensure all chemicals are correctly stored.	Monthly.	Incorrectly stored chemicals reported using the incident report form.	Ongoing.	Area Superintendent.
Inspection of operational areas to ensure any chemical spills have been dealt with according to the Chemical Spill Procedure.	Monthly.	Spills/leaks of chemicals (including explosives and AMD) are to be recorded using the Incident Report Form.	As required.	Area Superintendent.
		Reportable spills/leaks are reported to the DoW within 24 hours.	Within 24 hours of a reportable incident.	Site Environmental Manager.
		Incident report sent to the DoW within seven days.	Within seven days of a reportable incident.	Site Environmental Manager.
Sampling in accordance with the Groundwater Monitoring Program and Groundwater Sampling Procedure.	In accordance with the Groundwater Monitoring Program.	Contamination of groundwater reported using the Incident Report Form.	In accordance with the Groundwater Sampling Procedure.	Site Environmental Manager.
		Report describing any groundwater contamination sent to the DoW.	In accordance with the Groundwater Licence.	Site Environmental Manager.
In accordance with the Flora Monitoring Program.	In accordance with the Flora Monitoring Program.	Loss of habitat or flora as a result of chemical contamination is reported using the Incident Report Form.	As required.	Area Superintendent.
In accordance with the Species Specific Fauna Monitoring Program.	In accordance with the Species Specific Fauna Monitoring Program.	Loss of fauna as a result of chemical contamination is reported using the Incident Report Form.	As required.	Area Superintendent.
Water quality at alternative stock water points is monitored Surface Water Monitoring Program to ensure it is safe for stock.	In accordance with the Surface Water Monitoring Program.	Exceedance of stock water quality guidelines reported to the stock owner and DoW.	As required.	Site Environmental Manager.

Programs	Flora Monitoring Program. Groundwater Monitoring Program. Species Specific Fauna Monitoring Program. Surface Water Monitoring Program.
Reports	DEC Controlled Waste Disposal Records. DoW Incident Report. Annual Report. Incident Report Form.

10 Operation artificial light management plan

The objectives, targets and strategies for artificial light management at the Project have been given in Table 10–1. Monitoring is outlined in Table 10–2, with reporting requirements in Table 10-3.

Table 10–1: Operation light management plan.

OPERATION LIGHT MANAGEMENT PLAN	
Objectives	<p>Adopt lighting practices to maximise energy efficiency, reduce greenhouse gas emissions and reduce the Project ecological footprint.</p> <p>Provide the minimum required lighting to satisfy Occupational Health and Safety (OHS) requirements and relevant Australian Standards.</p> <p>Minimise the disturbance of migratory avifauna associated with the Marsh.</p> <p>Minimise any reduction in amenity for the residents of Roy Hill Pastoral Station.</p>
Targets	<p>Minimise impacts associated with light.</p> <p>Where possible, usage of energy efficient lighting.</p>
Potential Light Impacts	<p>Operation of the Project has the potential to result in the following impacts associated with light management within and surrounding the Project Area:</p> <ul style="list-style-type: none"> • unnecessary luminaires increase energy consumption and GHG emissions; • project lamps fail to satisfy OHS and Australian Standards; • adverse behavioural changes to nocturnal fauna and habitat fragmentation and reduced connectivity; and • reduction of staff or residential amenity.
Management Strategies	<p>When not in use, lighting deemed not essential to personnel safety is to be switched off.</p> <p>Photo-electric cell sensors to be installed on all outdoor lighting.</p> <p>Ensure lamps maintain light output to Australian Standard and Building Code of Australia maintenance levels.</p> <p>Energy consumption of Project luminaires to be recorded.</p> <p>Position luminaries to directly focus on intended target.</p> <p>Select lighting with beam characteristics applicable to the task.</p> <p>Design, install and maintain a light monitoring program to ensure the objectives and initiatives of the EMP are incorporated into the Project design.</p> <p>Installation of electronic lighting control gear to manage voltage, reduce energy consumption and increase lamp life.</p> <p>Decrease luminance to minimum safe operating levels.</p> <p>Minimise light spill from Project luminaires.</p> <p>Luminary observations to be recorded at sensitive receptors Appropriate, site specific trigger values will be established in the Light Monitoring Program.</p> <p>Expired luminaires will be appropriately disposed to prevent contamination to the environment.</p>

Table 10–2: Operation light monitoring.

MONITORING	TIMING	REPORTING	TIMING	RESPONSIBILITIES
The site environmental manager will undertake regular site inspections to ensure all unnecessary Project lighting is switched off Inspections to be conducted in accordance with the Light Monitoring Program to be prepared.	Ongoing.	Project luminaire use to be annually reviewed as a component of the Light Monitoring Program.	Annually.	Site Electrician.
Monitoring program to be reviewed periodically.	Annually.	Performance to be recorded in Annual Project Report.	Annually.	Site Environmental Manager.
The site environmental manager will ensure replacement luminaires are correctly installed and operating within the required guidelines.	As required.	Replaced lamps will be recorded in the waste disposal register and disposed of in accordance with the Waste Environmental Management Plan.	Ongoing.	Site Electrician.
Inspections undertaken in accordance with the Light Monitoring Program to be prepared.	Implemented during operation.	Outcomes of the Light Monitoring Program included in the Project Annual Report.	Annually.	Site Manager.
Site specific monitoring procedure to be conducted in accordance with the Light Monitoring Program to be prepared.	Monthly.	If trigger values exceeded.	As required.	Site Environmental Manager.
As a component of the Light Monitoring Program, the site environmental manager will ensure replacement luminaires are correctly installed and operating at levels within the required guidelines.	As required.	Replaced lamps will be recorded in the waste disposal register and disposed of in accordance with the Waste Management Plan.	Ongoing.	Site Electrician.

11 Operation hydrocarbon management plan

The objectives, targets and strategies for hydrocarbon management at the Project have been given in Table 11–1. Monitoring is outlined in Table 11–2, with reporting requirements in 11-3.

Table 11–1: Operation hydrocarbon management plan.

OPERATION HYDROCARBON MANAGEMENT PLAN	
Objectives	<p>Prevent the transport, storage and use of hydrocarbons at the Project from contaminating soil, groundwater and/or surface water.</p> <p>Prevent the storage and use of hydrocarbons at the Project from damaging flora and fauna on or surrounding the Project area.</p> <p>Ensure hydrocarbons leaks or spills are cleaned up and any necessary site remediation is undertaken.</p>
Targets	<p>All hydrocarbons are stored, used and disposed of correctly.</p> <p>No hydrocarbon contamination of soil, groundwater and/or surface water.</p>
Potential Hydrocarbon Impacts	<p>Operation of the Project has the potential to result in the following impacts associated with hydrocarbon management within and surrounding the Project area:</p> <ul style="list-style-type: none"> • hydrocarbon contamination of soil, surface water and groundwater; and • loss of habitat, native flora and fauna (including subterranean fauna) and/or stock from exposure to hydrocarbons.
Management Strategies	<p>All hydrocarbons to be stored according to Australian Standard AS 1940-2004.</p> <p>All spills/leaks to be cleaned up in accordance with the Hydrocarbon Spill Procedure.</p> <p>Groundwater tested in accordance with the Groundwater Monitoring Program to identify any evidence of contamination.</p> <p>Monitoring of surface water, groundwater and stock watering points.</p> <p>Remediation or disposal of any contaminated soil</p> <p>Soil remediation farm to be aerated, fertilised and kept moist to encourage bioremediation.</p> <p>Ongoing monitoring of flora in accordance with the Flora Monitoring Program to identify any impacts of hydrocarbon leaks or spills</p> <p>Ongoing monitoring of fauna in accordance with the Species Specific Fauna Monitoring Program to identify any impacts of hydrocarbon leaks or spills.</p> <p>Ongoing monitoring of alternative stock watering points in accordance with the Surface Water Monitoring Program.</p> <p>Waste chemicals, hydrocarbons and other hazardous materials will be transported off site.</p>

Table 11–2: Operation hydrocarbon monitoring.

MONITORING	TIMING	REPORTING	TIMING	RESPONSIBILITIES
Inspect active mining operation areas to ensure all hydrocarbons are correctly stored.	Monthly.	Incorrectly stored hydrocarbons reported using the Environmental Daybook.	Ongoing.	Area Superintendent.
Inspect active mining operation areas to ensure any hydrocarbon spills have been dealt with according to the Hydrocarbon Spill Procedure.	Monthly.	Spills/leaks of hydrocarbons, are to be recorded using the Incident Report Form.	As required.	Area Superintendent.
Provide an oil storage tank at the vehicle washdown facility of 1,500L capacity.		Reportable spills/leaks are reported to the DoW within 24 hours	Within 24 hours of a reportable incident.	Site Environmental Manager.
Provide an oil/contaminate tank of 5,000L at the refueling facility with offsite removal by road tanker.		Incident report sent to the DoW within seven days	Within seven days of a reportable incident	Site Environmental Manager
Sampling in accordance with the Groundwater Monitoring Program and Groundwater Sampling Procedure.	In accordance with the Groundwater Monitoring Program.	Contamination of groundwater reported using the Incident Report Form.	In accordance with the Groundwater Sampling Procedure.	Site Environmental Manager.
		Report describing any groundwater contamination sent to the DoW.	In accordance with the Groundwater Licence.	Site Environmental Manager.
Sampling of surface water, groundwater and stock watering points.	In accordance with Integrated Water Management Plan.	Monitoring results to be documented in Integrated Water Management Plan.	Annually.	Site Environmental Manager.
Inspection of the Soil Remediation Farm to ensure only soil contaminated with hydrocarbon is placed at the farm.	In accordance with the Soil Farm Remediation Procedure.	Incorrectly disposed soil at the Soil Land Farm is reported using the Environmental Daybook.	Ongoing.	Area Superintendent.
Soil to be sampled and laboratory tested for total recoverable hydrocarbon (TRH) and benzene, toluene, ethylbenzene and xylene (BTEX) to measure rates of bioremediation.	Quarterly.	Laboratory results and bioremediation volumes to be described in the Project Annual Report.	Annually.	Site Environmental Manager.
In accordance with the Flora Monitoring Program.	In accordance with the Flora Monitoring Program.	Any loss of habitat or flora as a result of hydrocarbon contamination is reported using the Incident Report Form.	As required.	Area Superintendent.
In accordance with the Species Specific Fauna Monitoring Program.	In accordance with the Species Specific Fauna Monitoring Program.	Any loss of fauna as a result of hydrocarbon contamination is reported using the Incident Report Form.	As required.	Area Superintendent.
Water quality at alternative stock water points is monitored Surface Water Monitoring Program to ensure it is safe for stock.	In accordance with the Surface Water Monitoring Program.	Any exceedance of stock water quality guidelines reported to the stock owner and DoW.	As required.	Site Environmental Manager.
In accordance with Hydrocarbons Management Program.	As required.	In accordance with Hydrocarbon Management Program.	As required.	Area Superintendent.

12 Operation dust management plan

The objectives, targets and strategies for dust management at the Project have been given in Table 12–1. Flora monitoring is outlined in Table 12–2, with reporting requirements in Table 12-3.

Table 12–1: Operation dust management plan.

OPERATION DUST MANAGEMENT PLAN	
Objectives	<p>Minimise dust mobilisation into the atmosphere.</p> <p>Maintain air quality consistent with NEPM Ambient Air Quality Standards.</p>
Targets	Air quality complies with the NEPM Ambient Air Quality Standards.
Potential Dust Impacts	<p>Operation of the Project has the potential to result in the following impacts associated with air quality within and surrounding the Project area:</p> <ul style="list-style-type: none"> • increase in dust due to vehicle movements, blasting, ore crushing/processing/loading activities and from disturbed areas that are cleared of native vegetation; • decline and/or loss of vegetation as a result of dust smothering or dust suppression; and • adverse health effects on site personnel due to dust exposure.
Management Strategies	<p>All vehicles will remain within designated roads and park only in allocated areas.</p> <p>Application of dust suppression techniques (eg water trucks with dribble nozzles) along roads and at locations of high dust risk, eg stockpiles.</p> <p>Trucks and construction plant should be well maintained, in accordance with manufacturer's specifications.</p> <p>Trips and trip distances should be reduced where possible.</p> <p>Limit the height and number of stockpiles.</p> <p>Modify working practices by limiting scrapers daily working hours and during times of high wind.</p> <p>Limit the laying of ballast during periods of high winds.</p> <p>Application of dust suppression techniques (eg water trucks with dribble nozzles) along roads and at locations of high dust risk, eg stockpiles.</p> <p>Management of saline dust suppressants.</p> <p>Monitor dust emission levels at high risk locations and sensitive receptors.</p> <p>Application of dust suppression techniques (eg water trucks with dribble nozzles) along roads, at locations of high dust risk, eg stockpiles.</p> <p>Minimise clearing of native vegetation.</p>

13 Operation gaseous air emissions management plan

The objectives, targets and strategies for air emission management at the Project have been given in Table 13–1. Monitoring is outlined in Table 13–2, with reporting requirements in Table 13-3.

Table 13–1: Operation gaseous air emissions management plan.

GASEOUS AIR EMISSIONS MANAGEMENT PLAN	
Objectives	Maintain air quality consistent with NEPM Ambient Air Quality Standards. Minimise Green House Gas emissions during operation of the Project.
Targets	Air quality complies with the NEPM Ambient Air Quality Standards.
Potential Gaseous Air Emissions Impacts	Operation of the Project has the potential to result in the following impacts associated with gaseous air emissions at a local regional and global level: <ul style="list-style-type: none"> greenhouse gas emissions from the generation of electricity, burning of hydrocarbon transport fuel, fumes from blasting activities, disposal and treatment of waste and wastewater, and the decay of cleared native vegetation.
Management Strategies	Consider options for the fuel used for on-site electricity generation and efficiency of generators. Maximise energy efficiency of stationary equipment using electricity on site. Minimise haulage distances. Maximise fuel efficiency of mobile equipment and fuel type used and minimise haulage distances. Regularly inspect, maintain and replace mobile equipment so that efficiency is maximised during the life of the item. Maximise the efficiency of blasting operations. Minimise production of waste materials and maximise efficiency of waste disposal and wastewater treatment. Minimise the area of native vegetation that is cleared, and where possible avoid more heavily vegetated areas. Investigate carbon sequestration options to offset Project generated GHG emissions. Monitor, report and manage energy consumption. Quantify energy production, energy consumption, GHG emissions and efficiencies.

Table 13–2: Operation gaseous air emission monitoring.

MONITORING	TIMING	REPORTING	TIMING	RESPONSIBILITIES
Fuel efficiency of generating plant and energy efficiency of stationary equipment is reviewed prior to purchase or lease approval according to the Greenhouse Gas Accounting and Reporting Program.	Prior to purchase/lease approval of generating plant and stationary equipment.	Sustainability Report. National Greenhouse and Energy Reporting. Energy Efficiency Opportunities Reporting. Greenhouse Challenge Plus Reporting.	Annually.	Site Environmental Manager.

14 Operation noise and vibration management plan

The objectives, targets and strategies for noise management at the Project have been given in Table 14–1. Monitoring is outlined in Table 14-2, with reporting requirements in Table 14-3.

Table 14–1: Operation noise and vibration management plan.

OPERATION NOISE AND VIBRATION MANAGEMENT PLAN	
Objectives	<p>Minimise noise generation.</p> <p>Minimise impacts on sensitive fauna.</p> <p>Avoid impacts of noise pollution on Project staff and contractors.</p> <p>Avoid impacts to the amenity of nearby residents.</p>
Targets	<p>No adverse health impacts of from noise pollution on RHIO staff and sub-contractors.</p> <p>No complaints from nearby residents.</p>
Potential Noise and Vibration Impacts	<p>Operation of the Project has the potential to result in the following impacts noise related impacts within and surrounding the Project area:</p> <ul style="list-style-type: none"> • restriction of available fauna habitat; • loss of amenity of nearby residence (Roy Hill homestead) due to noise from: • vehicle movements within the Project area, the realigned Marble Bar Road; • blasting activities; and • noise related injuries to Project staff and contractors.
Management Strategies	<p>Consider the operating noise, vibration and potential mitigation measures (eg sound absorption devices) of mobile equipment when selecting makes and models to purchase or lease.</p> <p>Regularly inspect, maintain and replace mobile equipment so that noise levels are minimised during the equipment life.</p> <p>All blasting will be restricted to daylight hours and conducted during set schedules.</p> <p>Any noise complaints lodged are promptly responded to by the Site Environmental Manager.</p> <p>Blasting operation would comply with the most stringent airblast limit of 115dB Linear at the nearest noise sensitive dwellings.</p>

Table 14–2: Operation noise and vibration monitoring.

MONITORING	TIMING	REPORTING	TIMING	RESPONSIBILITIES
Noise specifications of mobile and fixed plant are reviewed prior to purchase or lease approval	Prior to purchase/lease approval of mobile and fixed plant.	Not applicable.	Not applicable.	Site Procurement Manager.
Ongoing monitoring of noise to quantify impacts at nearby residences in accordance with the Noise Monitoring Program.	In accordance with the Noise Monitoring Program.	Any exceedance of the <i>Environmental Protection (Noise) Regulations, 1997</i> is reported to the DEC.	As required.	Site Environmental Manager.
		Any exceedances and complaints are summarised in the Project's Annual Report.	Annually.	Site Environmental Manager.
Monitoring conducted according to the Noise Monitoring Program.	In accordance with the Noise Monitoring Program.	Exceedance of the <i>Environmental Protection (Noise) Regulations, 1997</i> is reported to the DEC.	As required.	Site Environmental Manager.
		Exceedances and complaints are summarised in the Project Annual Report.	Annually.	Site Environmental Manager.
Complaints register reviewed to determine that all complaints have been closed out within a period of one month.	Monthly.	Acknowledgement of complaint issues to instigator describing how complaint will be addressed.	Within seven days.	Site Environmental Manager.
		Complaint response issued to the instigator describing any investigations, outcomes and management measures.	Within one month.	Site Environmental Manager.
		Any exceedances and complaints are summarised in the Project Annual Report.	Annually.	Site Environmental Manager.
Inspections to ensure that no clearing has occurred outside the approved time-period.	Weekly.	Clearing outside of approved times is to be recorded using the Incident Report Form.	As required.	Clearing Foreman.
		Clearing outside of approved areas is reported to the DEC and DMP (formerly DoIR).	As required.	Site Environmental Manager.

Programs	Noise Monitoring Program.
Reports	Annual Report. Environmental Daybook. Incident Report Form.

15 Operation fire management plan

The objectives, targets and strategies for fire management at the Project have been given in Table 15-1. Monitoring is outlined in Table 15-2, with reporting requirements in Table 15-3.

Table 15-1: Operation fire management plan.

OPERATION FIRE MANAGEMENT PLAN	
Objectives	To ensure Project activities do not result in the deliberate or accidental ignition of bushfire.
Targets	No bushfires started as a result of mining operation activities.
Potential Fire Impacts	Operation of the Project has the potential to result in the following impacts associated with fires within and surrounding the Project area: <ul style="list-style-type: none"> • damage to infrastructure and facilities; and • damage, injury or death of flora and fauna.
Management Strategies	All vehicles run on diesel. Fire extinguishers fitted in all buildings, mining fleet and drill rigs. Structures that divert water flow (eg windrows and spoon drains and road) will act as fire breaks. Field maintenance to be conducted on a fire break, eg cleared ground. All staff and sub-contractors will undertake fire safety training (OHS induction). No open fires permitted within the Project area. Regular liaisons with the Shire regarding current fire danger status, bushfires and fire bans. Fire management coordinated by the Project Chief Fire Warden. A dust suppression vehicle capable of use as a fire response vehicle.

Table 15-2: Operation fire monitoring.

MONITORING	TIMING	REPORTING	TIMING	RESPONSIBILITIES
Inspections in accordance with the Safety Management Plan to ensure all fire fighting devices are in good working order.	Monthly.	Records of inspections and maintenance recorded in the Site Safety Register.	Monthly.	Chief Fire Warden.
Inspections to ensure firebreaks have been established and maintained.	Annually.	Fire break status to be updated in the Site Safety Register.	Annually.	Chief Fire Warden.
Inspections to identify any field maintenance conducted in an inappropriate location.	Monthly.	Any unsuitable field maintenance reported to the Workshop/Mechanical Manager using the Incident Report Form.	As required.	Site Environmental Manager.
All staff completed the OHS induction.	Prior to commencing site work.	Not applicable.	Not applicable.	Site Safety Manager.
Site inspection to identify evidence of any open fires	Monthly.	All fire events to be reported using the Incident Report Form.	As required.	Chief Fire Warden.
Contact with Shire Environment, Health and Safety Officer regarding fire risks in the area	Monthly.	Not applicable.	Not applicable.	Chief Fire Warden.
Inspections in accordance with the Safety Management Plan to ensure all fire fighting devices are in good working order.	Monthly.	Any required maintenance reported to the Workshop/Mechanical Manager.	As required.	Chief Fire Warden.

16 Operation aboriginal heritage management plan

The objectives, targets and strategies for Aboriginal heritage management at the Project are given in Table 16–1. Monitoring is outlined in Table 16–2, with reporting requirements in Table 16-3.

Table 16–1: Operation Aboriginal heritage management plan.

OPERATION ABORIGINAL HERITAGE MANAGEMENT PLAN	
Objectives	Manage activities in a manner that complies with the <i>Aboriginal Heritage Act, 1972</i> . Protecting places and objects of Aboriginal heritage value that exist within the Project area.
Targets	No impact on Aboriginal heritage sites without approval from the Minister for Indigenous Affairs.
Potential Aboriginal Heritage Impacts	Operation of the Project has the potential to result in the following impact to Aboriginal heritage within and surrounding the Project area: <ul style="list-style-type: none"> • damage to Aboriginal heritage sites and/or ethnographical values located within or immediately adjacent to planned disturbance areas; and • reduced access to undisturbed cultural heritage sites within the Project area due to access restrictions.
Management Strategies	Where possible avoid disturbance to known cultural heritage sites and places with recognised ethnographical values Where disturbance of known cultural heritage sites and places with recognised ethnographical values cannot be avoided, obtain Ministerial consent under Section 18 (<i>Aboriginal Heritage Act, 1972</i>). Implement control measures to protect undisturbed cultural heritage sites adjacent to Project areas (eg signposts, fencing, awareness programs for personnel) in conjunction with the Niyiyaparli People. Any newly identified or unauthorised disturbances to culturally sensitive sites will be reported to the Department of Indigenous Affairs and representatives of the Niyiyaparli people. Staff and contractor site inductions will include cultural awareness.

Table 16–2: Operation Aboriginal heritage monitoring.

MONITORING	TIMING	REPORTING	TIMING	RESPONSIBILITIES
Conduct heritage surveys on any proposed new disturbance areas according to the Aboriginal Heritage Procedure.	Prior to work commencing in new disturbance areas.	Any new culturally sensitive sites will be immediately reported to the Department of Indigenous Affairs.	As required.	Archaeologists or Anthropological Consultant.
Site inspections to ensure compliance with any conditions of the Ministerial consent under Section 18.	In accordance with any conditions of the Ministerial consent under Section 18.	In accordance with any conditions of the Ministerial consent under Section 18.	In accordance with any conditions of the Ministerial consent under Section 18.	Indigenous Relations Coordinator.
Inspect implemented control measures in accordance with the Aboriginal Heritage Monitoring Program.	Biannually.	Report any disturbance of known cultural heritage sites to the Department of Indigenous Affairs and representatives of the Niyiyaparli people.	As required.	Indigenous Relations Coordinator.
Inspect known cultural heritage sites in accordance with the Aboriginal Heritage Monitoring Program to ensure unauthorised disturbances have not occurred.	Regular intervals as set out in the Aboriginal Heritage Management Procedure.	Report any disturbance of known cultural heritage sites to the Department of Indigenous Affairs and representatives of the Niyiyaparli people.	As required.	Indigenous Relations Coordinator.
Records to be kept of all site personnel and contractors inductions	Not applicable.	Report any suspected new heritage sites or artifacts.	As required.	All personnel.
		Report any damage to heritage sites using the Incident Report Form.	As required.	All personnel.

Table 16–3: Operation Aboriginal heritage reporting requirements and documents.

REPORTING REQUIREMENTS	
Programs	Project Aboriginal Heritage Monitoring Program. Aboriginal Heritage Management Plan.
Procedures	Project Aboriginal Heritage Procedure.
Reports	Project Incident Report Form.

DRAFT

17 Training

Training will be provided to ensure all staff and contractors are aware of commitments and procedures pertinent to this OEMP. The training program will ensure all staff are aware of the environmental impacts associated with the Project. The training program shall be inclusive of the following topics:

- an overview of the Project area's environmental value and the Project environmental impacts;
- the need to notify the Environmental Team of:
 - weed infestations;
 - fauna injuries/fatalities;
 - feral animal sightings;
 - any erosion of topsoil stockpiles;
 - any clearing outside of approved areas;
 - any water leaks;
 - any suspected new aboriginal heritage sites or artefacts; and
 - any damage to Aboriginal heritage sites.

Specific environmental training will be provided to staff and contractors to ensure they are provided with the skills to ensure they are able to carry out specific responsibilities identified in the OEMP. These specific training requirements are described in the relevant monitoring programs.
