

Preliminary offset triggers – Residual Impact Significance Model

This table is based on the Residual Impact Significance Model page 11 of the WA Environmental Offsets Guidelines (Government of WA, 2014)

Part IV Environmental Factors	Terrestrial Fauna							
	Rare flora	Threatened ecological communities	Remnant vegetation	Wetlands & waterways	Conservation areas	High biological diversity	Habitat for fauna	Other
Residual impact that is environmentally unacceptable or cannot be offset								
Significant residual impacts that will require an offset – All significant residual impacts to species and ecosystems protected by statute or where the cumulative impact is already at a critical level								
Significant residual impacts that may require an offset – Any significant residual impact to potentially threatened species and ecosystems, areas of high environmental value or where the cumulative impact may reach critical levels if not managed							Clearing of 1.24 ha of minor drainage line that provides habitat for Pilbara Olive Python	
Residual impacts that are not significant			Clearing of 23.09 ha of vegetation that is well represented in the region and local environment.				Clearing of 21.85 ha of fauna habitat, predominantly foothills habitat (20.21 ha).
