SUMMARY

This report details the results of a two phase (seasonal), Level 2 terrestrial fauna survey within Audalia Resources Limited's (Audalia) Medcalf Vanadium Project Area situated about 100 km west, south-west of Norseman, Western Australia (Figure 1).

The survey has been carried out to provide baseline fauna datasets for areas within and near potential mine and associated infrastructure areas with a primary focus on identifying potential impacts on fauna species of conservation significance. It is anticipated that the survey results will be taken into consideration by State and Federal environmental regulatory authorities when future applications to mine are submitted for approval.

The boundary of the defined study area is shown in all figures and covers about 18.5 km² (Figure 2). The study area corresponds with Mining Lease 63/656 and encompasses the two main potential open cut pits along with the proposed locations of site offices, plant and workshop facilities, a proposed tailing storage facility and a proposed waste rock (overburden) landform. It should be noted that the location of proposed infrastructure is not finalised and the possible locations has changed between phases.

The field survey recorded 119 native and five introduced vertebrate species. The identified assemblage included one species of frog, 32 species of reptiles, 68 species of birds, and 18 native mammals (including 8 species of bat). Two species of conservation significance were recorded, these being the inland sub-species of the western rosella (Priority 4) and the central long-eared bat (Priority 3).

No evidence of two fauna species of primary interest, the chuditch or the malleefowl (both classified as Vulnerable on state and federal lists) was found within the areas investigated despite targeted trapping and surveys being carried out.

Evidence gathered to date suggests that no vertebrate fauna species of conservation significance has the potential to be affected to any significant degree by the proposal to develop a mine in the area given that most have wide ranging distributions and/or will persist in adjoining unaffected areas given the presence of extensive areas of similar habitat nearby. It is therefore not anticipated that the loss/modification of small areas of habitat on a local scale will result in a change in the status of any fauna species (i.e. cause population decline or localised extinction).

Based on the fauna survey results reported on here it is recommended that:

- The results of the fauna survey should be provided to the relevant regulatory authorities (e.g. DBCA) and interest groups for review and comment so as to ensure ongoing compliance with their current or future requirements;
- Ongoing planning for development should aim to locate infrastructure so as to minimise as much as reasonable and practical the area of remnant

vegetation requiring removal. Existing cleared areas/tracks should be used in preference to clearing additional areas. Areas of larger trees should be avoided if possible as they have the potential to provide significant microhabitats (e.g. tree hollows);

- Infrastructure should be positioned to avoid or minimise the disruption to surface and sub-surface hydrology where possible. Levees and drains designed to mimic natural drainage flows should be incorporated in plans where disruptions may occur.
- If the mining proposal proceeds, a fauna management plan should be formulated with reference to the above-mentioned recommendations, where considered relevant, with the aim of minimising impacts on fauna during construction and ongoing operations at the propose mine site. The management plan should also include aspects of feral animal management in particular in relation to cats and foxes so that activities such as rubbish disposal do not encourage or result in an increase in population numbers (for example).
- Based on the results obtained to date, no referral of the project to the federal Department of the Environment and Energy with respect to likely impacts on *EPBC Act* listed fauna species is considered warranted given that none appear to be utilising the site to any significant degree.

1. INTRODUCTION

1.1 BACKGROUND

This report details the results of a two phase (seasonal), Level 2 terrestrial fauna survey within Audalia Resources Limited's (Audalia) Medcalf Vanadium Project Area situated about 100 km west, south-west of Norseman, Western Australia (Figure 1).

Exploration work to date by Audalia and previous mining companies, has identified a potential economic resource of vanadium and titanium in three mineralised zones within the project area. Audalia's current focus is on completing a scoping study on the economics of the project.

The survey has been carried out to provide baseline fauna datasets for areas within and near potential mine and associated infrastructure areas with a primary focus on identifying any likely impacts on fauna species of conservation significance. It is anticipated that the survey results will be taken into consideration by State and Federal environmental regulatory authorities when future applications to mine are submitted for approval.

1.2 STUDY AREA

The boundary of the defined study area is shown in all figures and covers about 18.5 km² (Figure 2). The study area corresponds with Mining Lease 63/656 and encompasses the two main potential open cut pits along with the proposed locations of site offices, plant and workshop facilities, a proposed tailing storage facility and a proposed waste rock (overburden) landform. It should be noted that the location of proposed infrastructure is not finalised and the possible locations has changed between phases.

Lake Medcalf, situated about 5 km north east of the study area was also briefly examined during both survey periods given its close proximity, easy access and the fact that it represents a habitat type not found within the study area.

1.3 SURVEY SCOPE

The scope of the fauna survey reported on here was to:

- document the vertebrate fauna assemblages within the habitats of the study area using established sampling techniques;
- identify fauna of conservation significance (particularly state and federally listed threatened, migratory and priority fauna species) present or potentially present within the areas surveyed; and
- provide a generic assessment of the potential impacts of the proposed mine on fauna and fauna habitats occurring in the study area.

To comply with the scope of works and the likely requirements of environmental regulatory authorities the survey documented in this report was planned and implemented in accordance with:

- EPA (2016a). Statement of Environmental Principles, Factors and Objectives;
- EPA (2016b). Environmental Factor Guideline – Terrestrial Fauna Assessment;
- EPA (2016c). Technical Guidance – Terrestrial Vertebrate Fauna Surveys (replaces EPA (2004). Guidance for the Assessment of Environmental Factors No 56: Terrestrial Surveys for Environmental Impact Assessment, but not yet updated);
- EPA (2016d). Technical Guidance – Sampling Methods for Terrestrial Vertebrate Fauna (replaces EPA & DEC (2010). Technical Guide - Terrestrial Vertebrate Fauna Surveys for Environmental Impact Assessment, but not yet updated);
- Department of Environment, Water, Heritage and the Arts (DEWHA) (2010a). Survey guidelines for Australia's threatened bats. Guidelines for detecting bats listed as threatened under the *Environment Protection and Biodiversity Conservation Act 1999*. Department of Sustainability, Environment, Water, Population and Communities, Canberra, Australian Capital Territory;
- Department of Environment, Water, Heritage and the Arts (DEWHA) (2010b). Survey guidelines for Australia's threatened birds. Guidelines for detecting birds listed as threatened under the *Environment Protection and Biodiversity Conservation Act 1999*. Department of Sustainability, Environment, Water, Population and Communities, Canberra, Australian Capital Territory;
- Department of Sustainability, Environment, Water, Population and Communities (SEWPaC) (2011a). Survey guidelines for Australia's threatened mammals. Guidelines for detecting mammals listed as threatened under the *Environment Protection and Biodiversity Conservation Act 1999*. Department of Sustainability, Environment, Water, Population and Communities, Canberra, Australian Capital Territory;
- Department of Sustainability, Environment, Water, Population and Communities (SEWPaC) (2011b). Survey guidelines for Australia's threatened reptiles. Guidelines for detecting reptiles listed as threatened under the *Environment Protection and Biodiversity Conservation Act 1999*. Department of Sustainability, Environment, Water, Population and Communities, Canberra, Australian Capital Territory.

2. METHODS

2.1 FAUNA INVENTORY - DESKTOP REVIEW

2.1.1 Database Searches

Searches of the following databases were undertaken to aid in the compilation of a list of vertebrate fauna potentially occurring within the study area:

- DBCA's NatureMap Database Search (combined data from DBCA, Western Australian Museum, Birds Australia and consultant's reports) (DBCA 2020); and
- Protected matters search tool (DotEE 2020).

It should be noted that these lists are based on observations from a broader area than the study site and therefore may include species that would only ever occur as vagrants in the actual study area due to a lack of suitable habitat or the presence of only marginal habitat. The databases also often included very old records and in some cases the species in question have become locally or regionally extinct.

Information from these sources should therefore be taken as indicative only and local knowledge and information needs also to be taken into consideration when determining what actual species may be present within the specific area being investigated.

2.1.2 Previous Fauna Surveys in the Area

Fauna surveys, assessments and reviews have been undertaken in nearby areas in the past, though not all are publicly available and could not be referenced. The most significant of those available have been used as the primary reference material for compiling the potential fauna assemblage for the general area. Those reports referred to included, but were not limited to:

- Biota Environmental Sciences (Biota) (2006a). Forrestania Fauna Survey – Fauna and Fauna Assemblages Report. Unpublished report for Western Areas NL.
- Biota Environmental Sciences (Biota) (2006b). Forrestania Water Disposal Pipeline Survey – Fauna and Faunal Assemblages Report. Unpublished report for Western Areas NL.
- Biota Environmental Sciences (Biota) (2007a). Forrestania Monitoring Survey, Flying Fox Phases III and IV. Unpublished report for Western Areas NL.
- Biota Environmental Sciences (Biota) (2007b). Diggers South Fauna Survey – Phase I. Unpublished report for Western Areas NL.
- Biota Environmental Sciences (Biota) (2010). Spotted Quoll Haul Road Single Phase Fauna Survey. Unpublished report for Western Areas N.L. May 2010.

- Brearley, D.R., Dunlop, J.N., and Osborne, J.M. (1998). Biological survey and environmental assessment of the Emily-Ann Project area. Unpublished report for Lionore Pty Ltd.
- How, R.A., Newbey, K.R., Dell, J., Muir, B.G., & Hnatiuk, R.J. (1988). The biological survey of the eastern goldfields of Western Australia. Part 4. Lake Johnston-Hyden Study Area. Records of the Western Australian Museum, supplement No. 30. (includes fauna survey results from Lake Cronin, McDermid Rock, Frank Hann NP and Peak Charles).
- Duncan, S. Traill, B.J. & Watson, C. (2006). Vertebrate Fauna of the Honman Ridge - Bremer Range district, Great Western Woodlands, Western Australia. Unpublished report for the Wilderness Society.

As with the databases searches some reports refer to species that would not occur in the study area due to a lack of suitable habitat (extent and/or quality) and this fact was taken into consideration when compiling the potential fauna species list for the study area. It should also be noted that the NatureMap database is likely to include some records from previous fauna surveys in the area including some of those listed above.

2.1.3 Existing Publications

The following represent the main publications used to identify and refine the potential fauna species list for the study area:

- Anstis, M. (2013). Tadpoles and Frogs of Australia. New Holland Publishers, Sydney.
- Barrett, G., Silcocks, A., Barry, S., Cunningham, R. and Poulter, R. (2003). The New Atlas of Australian Birds. Royal Australasian Ornithologists Union, Victoria.
- Bush, B., Maryan, B., Browne-Cooper, R. & Robinson, D. (2007). Reptiles and Frogs in the Bush: Southwestern Australia. UWA Press, Nedlands.
- Churchill, S. (2008). Australian Bats. Second Edition, Allen & Unwin.
- Cogger, H.G. (2014). Reptiles and Amphibians of Australia. 7th Edition. CSIRO Publishing.
- Johnstone, R.E. and Storr, G.M. (1998). Handbook of Western Australian Birds: Volume 1 – Non-passerines (Emu to Dollarbird). Western Australian Museum, Perth Western Australia.
- Johnstone, R.E. and Storr, G.M. (2004). Handbook of Western Australian Birds: Volume 2 – Passerines (Blue-winged Pitta to Goldfinch). Western Australian Museum, Perth Western Australia.
- Menkhorst, P. and Knight, F. (2011). A Field Guide to the Mammals of Australia. Third Edition, Oxford University Press, Melbourne.

- Pizzey, G & Knight, F. (2012). The Field Guide to the Birds of Australia. 9th Edition. Harper Collins, Sydney.
- Storr, G.M., Smith, L.A. and Johnstone R.E. (1983). Lizards of Western Australia II: Dragons and Monitors. WA Museum, Perth.
- Storr, G.M., Smith, L.A. and Johnstone R.E. (1990). Lizards of Western Australia III: Geckos and Pygopods. WA Museum, Perth.
- Storr, G.M., Smith, L.A. and Johnstone R.E. (1999). Lizards of Western Australia I: Skinks. Revised Edition, WA Museum, Perth.

2.2 FAUNA INVENTORY – DETAILED FAUNA SURVEY

2.2.1 Survey Timing and Weather

The first phase seasonal survey was undertaken over a ten day period in November 2013, the second over a nine day period in March 2014. Table 1 below shows the daily weather records from Salmon Gums (94km south east of the study area) during the two phases.

Table 1: Daily Temperatures and Rainfall at the Salmon Gums Weather Station During Phase 1 and Phase 2 Survey Periods (BOM 2014).

	Date	Min (°C)	Max (°C)	Rainfall (mm)
Phase 1	11/11/2013	10.9	29.7	0.0
	12/11/2013	13.6	33.5	0.0
	13/11/2013	17.1	30.9	0.0
	14/11/2013	12.2	30.0	0.0
	15/11/2013	9.6	26.8	0.0
	16/11/2013	8.8	31.4	0.0
	17/11/2013	13.6	35.7	0.0
	18/11/2013	14.0	19.5	0.2
	19/11/2013	8.0	21.6	0.2
	20/11/2013	10.4	22.4	0.0
Phase 2	10/03/2014	6.4	29.6	0.2
	11/03/2014	11.0	29.1	0.0
	12/03/2014	10.7	32.2	0.0
	13/03/2014	16.5	30.3	0.0
	14/03/2014	16.8	25.2	0.0
	15/03/2014	9.6	24.1	0.0
	16/03/2014	10.0	29.8	0.0
	17/03/2014	15.1	30.6	0.0
	18/03/2014	16.3	30.3	0.0

2.2.2 Survey Team

The field survey has been carried out under a “Licence to Take Fauna for Scientific Purposes” issued by the DBCA (SF 009534). The fauna survey team comprised Greg Harewood and Michael Brown.

Analysis of bat recordings was completed by Mr Bob Bullen (Bat Call WA).

2.2.3 Site Selection

The sampling approach for this survey consisted of a combination of systematic fauna sampling and targeted/opportunistic searches within the range of habitats present within the defined study area and nearby locations.

The systematic component of the fauna survey involved the establishment of six main trap sites within the defined study area (Figure 3 and Plates 1 to 6) during Phase 1. Sites were selected to provide representative examples of the major vegetation communities and landforms present within the study area, though logistics were also taken into consideration.

Plate 1: Trap Site 1 (Burnt and unburnt Low woodland of *Eucalyptus salmonophloia* over mixed shrubs – Clay Loam Plain bordering major creek line)

Plate 2: Trap Site 2 (Regrowth - mid open mallee woodland of *Eucalyptus livida* over mid open shrubland and open low shrubland - Hillslope/Hill Crest)

Plate 3: Trap Site 3 (Unburnt Mid mallee shrubland of *Eucalyptus* spp. over mid shrubland of *Melaleuca pauperiflora* and mixed low shrubland - Clay-Loam Plain.)

Plate 4: Trap Site 4 (Regrowth - mid open mallee woodland of *Eucalyptus livida* over mid open shrubland and open low shrubland - Hillslope bordering minor creek line)

Plate 5: Trap Site 5 (Regrowth mixed low shrubland on hillslope – Subtle Hill Slope)

Plate 6: Trap Site 6 (Burnt Low open woodland of *Eucalyptus salmonophloia* over mixed shrubs on clay loam plain – bordering minor creek line)

It should be noted that at the time of the surveys most of the vegetation within the study area was in a state of regeneration after having been burnt during a series of fires in 2009/2010 (Botanica 2017). It is not possible to determine with any certainty how this may have affected the results of targeted surveys for some species as their pre-fire status in the area is not known. Survey results for most species are however considered to be largely unaffected as unburnt habitat was still present and, in some cases, burnt habitat would have made it easier to determine if some species were utilising the area (at least prior to the fire), this in particular applies to the malleefowl, where nest mounds, if present would have been easier to find as they would be less concealed. With respect to other species

(e.g. chuditch) it is the authors opinion that there was sufficient unburnt and advanced regrowth habitat in the survey area and surrounds to support individuals if in fact present, allowing the opportunity for their detection during the surveys. It should also be note that the likelihood of occurrence of each species was also based on documented records and not just the presence/absence of apparently suitable habitat (pre-fire) or direct observation.

2.2.4 Ground Fauna Survey

To provide information on the abundance and distribution of ground fauna present (i.e. small mammals, reptile and amphibian species), trapping, utilising a combination of cage traps and Elliott traps (to target mammal species), fly wire drift fences with associated pit fall traps (to target small mammals, reptile and amphibian species) and funnel traps (to target larger reptile species) were utilised at each of the six main trap sites detailed above.

Trap lines were established at the previously selected sites with each line consisting of 10 trap arrays. Each trap array consisted of a ~7 long, 30 cm high fly wire drift fence with a centrally located pit trap (20L bucket) dug in underneath with one funnel trap located at each end. One small Elliott (A) trap was also placed in the vicinity of each trap array. Elliot traps were baited with “universal bait” (a mixture of peanut butter, rolled oats and sardines).

In total, trapping utilised 60 Elliott (A) traps, 60 (20L) buckets and 120 funnel traps. Pit traps have been left in place and sealed with a lid, secured with rocks/dirt for re-use during the Phase 2 survey. All traps were left open for seven nights during each phase.

A summary of trap nights carried out during each phase is provided in

Table 2 below. The location of trap sites is shown in Figure 3. Additional details on trap locations are provided in Appendix B.

Table 2: Summary of Trap Nights – Phase 1 & 2

	Site Number	Fauna Habitat	# Nights for Elliott Traps	# Nights for Funnel Traps	# Nights for Bucket Pit Traps	Total # Trap Nights
PHASE 1 NOV 2013	1	Clay-Loam Plain-Eucalypt Woodland/ Mallee woodland and Shrublands	70	140	70	280
	2	Hillslope-Eucalypt Woodland/ Mallee Woodland and Shrubland/ Other Shrubland	70	140	70	280
	3	Clay-Loam Plain-Eucalypt Woodland/ Mallee woodland and Shrublands	70	140	70	280
	4	Hillslope-Eucalypt Woodland/ Mallee Woodland and Shrubland/ Other Shrubland	70	140	70	280
	5	Hillslope-Eucalypt Woodland/ Mallee Woodland and	70	140	70	280

	Site Number	Fauna Habitat	# Nights for Elliott Traps	# Nights for Funnel Traps	# Nights for Bucket Pit Traps	Total # Trap Nights
		Shrubland/ Other Shrubland				
	6	Clay-Loam Plain-Eucalypt Woodland/ Mallee woodland and Shrublands / Hillslope-Eucalypt Woodland/ Mallee Woodland and Shrubland/ Other Shrubland	70	140	70	280
	Total		420	840	420	1,680
PHASE 2 MARCH 2014	1	Clay-Loam Plain-Eucalypt Woodland/ Mallee woodland and Shrublands	70	140	70	280
	2	Hillslope-Eucalypt Woodland/ Mallee Woodland and Shrubland/ Other Shrubland	70	140	70	280
	3	Clay-Loam Plain-Eucalypt Woodland/ Mallee woodland and Shrublands	70	140	70	280
	4	Hillslope-Eucalypt Woodland/ Mallee Woodland and Shrubland/ Other Shrubland	70	140	70	280
	5	Hillslope-Eucalypt Woodland/ Mallee Woodland and Shrubland/ Other Shrubland	70	140	70	280
	6	Clay-Loam Plain-Eucalypt Woodland/ Mallee woodland and Shrublands / Hillslope-Eucalypt Woodland/ Mallee Woodland and Shrubland/ Other Shrubland	70	140	70	280
	Total		420	840	420	1,680
	Grand Total		840	1,680	840	3,360

Species of conservation significance that were targeted as part of this component of the field survey included but was not limited to:

- Lake Cronin Snake.

2.2.5 Targeted Survey - Chuditch

A targeted trapping survey for chuditch was carried out as part of the fauna assessment. Methods used followed closely the “standard” techniques documented by the DBCA (Orell and Morris 1994), the main variation being traps were placed at a higher density along tracks than recommended (i.e. 100m spacing instead of 200m) and left open for a longer period (at least six nights as opposed to recommended four nights).

A total of 70 large traps (20 cage traps and 50 large Elliot (B) traps) were placed at ~100m intervals directly adjacent to the two main tracks that run through the study area (Figure 3). Traps were checked each morning and rebaited as required.

During the Phase 1 survey, thirty eight of the traps were left open for eight nights (304 trap nights), with the balance (32 traps), left open for six nights (192 trap nights) giving a total of 496 trap nights. During the Phase 2 survey, all 70 traps were left open for six nights (420 trap nights), giving a total over both phases of 916 trap nights (Table 3).

The targeted chuditch trapping was supplemented by the use of motion sensing cameras (see Section 2.2.9).

Table 3: Summary of Cage Nights – Phase 1 & 2

	Fauna Habitat	# Cage Traps	# Nights for Cage Traps
PHASE 1 NOV 2013	Clay-Loam Plain-Eucalypt Woodland/ Mallee woodland and Shrublands	13	104
	Hillslope-Eucalypt Woodland/ Mallee Woodland and Shrubland/ Other Shrubland	57	392
	Total	70	496
PHASE 2 MARCH 2014	Clay-Loam Plain-Eucalypt Woodland/ Mallee woodland and Shrublands	13	78
	Hillslope-Eucalypt Woodland/ Mallee Woodland and Shrubland/ Other Shrubland	57	342
	Total	70	420
	Grand Total	140	916

As previously indicated despite some habitats being burnt and therefore possibly sub-optimal it is the authors opinion that there was sufficient unburnt and advanced regrowth habitat in the survey area and surrounds to support chuditch individuals if in fact present, allowing the opportunity for their detection during the surveys. The species likelihood of occurrence was also based on documented records and not just the presence/absence of apparently suitable habitat (pre-fire) or direct observation.

2.2.6 Bird Surveys

Sampling of avifauna was carried out using a combination of techniques, including:

- 20 minute unbounded surveys conducted at each of the systematic sampling grids on several occasions;
- Traverses on foot between trap sites and within proposed infrastructure areas (i.e. tailings dam, waste landform and plant/workshop site in addition to potential mine areas); and

- Opportunistic observations of avifauna while driving around the study area (random over 19 days).

Species of conservation significance that were targeted as part of this component of the field survey included but was not limited to:

- Malleefowl;
- Hooded Plover;
- Great Egret;
- Cattle Egret;
- Peregrine Falcon;
- Western Rosella;
- Carnaby's Black-Cockatoo; and
- Fork-tailed Swift.

2.2.7 Targeted Survey - Malleefowl

A targeted survey for malleefowl was carried out and involved a series of closed spaced transects across the main potential impact zones (i.e. open cut pit areas, plant/workshop site, tailings storage facility and waste landform) in addition to some adjoining areas. Where practical transects were spaced about 30 to 40m apart (actual distance depending on vegetation density/visibility). The botanical survey team were also instructed to record observations of malleefowl or malleefowl mounds if observed. The aim of the survey was to locate any evidence of the species using the area, primarily by way of locating nest mounds (new and old) though looking for individuals, tracks and feathers was also part of the scope.

The fact that some sections of the survey were burnt did not affect the primary aim of this survey work which was to locate malleefowl nest mounds, which would in fact have been easier to located in burnt habitat.

2.2.8 Acoustic Bat Recordings

Acoustic recordings were undertaken using a Wildlife Acoustics SM2+ Bat Detector from sunset to sunrise in each instance.

During the Phase 1 survey recordings were taken over four nights and during the Phase 2 survey over five nights (total of about 90 hours of recording time). The locations of each recording are shown in Figure 3.

The detectors convert ultrasonic echolocation signals produced by bats into audible electronic signals that are then recorded. The recordings were later processed by Bob Bullen to determine the presence of species specific calls.

Additional details on the bat recordings carried out are contained in Appendix B.

Species of conservation significance that were targeted as part of this component of the field survey included but was not limited to:

- Central Long-eared Bat.

Table 4: Summary of Acoustic Bat Recordings – Phase 1 & 2

	Fauna Habitat	# Bat Recorder Sites	# Nights for Bat Recordings
PHASE 1 NOV 2013	Clay-Loam Plain-Eucalypt Woodland/ Mallee woodland and Shrublands	2	2
	Hillslope-Eucalypt Woodland/ Mallee Woodland and Shrubland/ Other Shrubland	2	2
	Total	4	4
PHASE 2 MARCH 2014	Clay-Loam Plain-Eucalypt Woodland/ Mallee woodland and Shrublands	2	2
	Hillslope-Eucalypt Woodland/ Mallee Woodland and Shrubland/ Other Shrubland	2	2
	Lake Medcalf	1	1
	Total	5	5
	Grand Total	9	9

2.2.9 Motion Sensing Cameras

Twelve motion sensing infrared cameras (“camera traps”) were placed at various locations within the study area during Phase 1 survey. An additional camera was placed near Lake Medcalf. The cameras were retrieved during the Phase 2 survey.

The location of cameras is shown in Figure 3 with additional details provided in Appendix B. A total of 1049 “camera trap days” were achieved and over 20,000 pictures taken, though it should be noted that a high percentage of photos at some locations were caused by moving vegetation.

Species of conservation significance that were targeted as part of this component of the field survey included but was not limited to:

- Chuditch;
- Malleefowl; and
- Western Brush Wallaby.

Table 5: Summary of Motion Sensing Cameras – Phase 1 & 2

	Fauna Habitat	# Camera Sites	# Camera Trap Days
PHASE 1-2 NOV 2013- MARCH 2014	Clay-Loam Plain-Eucalypt Woodland/ Mallee woodland and Shrublands	5	441
	Hillslope-Eucalypt Woodland/ Mallee Woodland and Shrubland/ Other Shrubland	7	492
	Lake Medcalf	1	116
	Total	13	1049

2.2.10 Spotlighting/Head Torching

Nocturnal surveys were carried out at selected trapping sites with the aim of locating nocturnal species that may be difficult to detect using alternative techniques. Vehicle transects were also carried out over four nights (two during each phase) along the main tracks that are present within the project area.

Species of conservation significance that were targeted as part of this component of the field survey included but was not limited to:

- Chuditch; and
- Western Brush Wallaby.

2.2.11 Targeted and Opportunistic Surveys

During the course of all the survey work non-systematic opportunistic observations of fauna species were made and recorded. Secondary evidence of fauna such as tracks, diggings and scats were also noted.

At each trapping site microhabitats were actively searched with the aim of locating the more cryptic fauna species that may inhabit the site. Searches included but were not limited to investigating burrows, investigating scats, tracks and other traces, turning fallen timber and rocks, opening standing timber crevices, peeling bark and raking leaf litter.

Species of conservation significance that were targeted as part of this component of the field survey included but was not limited to:

- Lake Cronin Snake.

2.3 FAUNA CONSERVATION CATEGORIES

The conservation significance of fauna species has been assessed using data from the following sources:

- *Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act)*. Administered by the Australian Government DAWE;
- *Biodiversity Conservation Act 2016 (BC Act)*. Administered by the Western Australian DBCA (Govt. of WA 2018). Note: The Wildlife Conservation (Specially Protected Fauna) Notice 2018 has been transitioned under regulations 170, 171 and 172 of the Biodiversity Conservation Regulations 2018 to be the lists of Threatened, Extinct and Specially Protected species under Part 2 of the *BC Act*;
- Red List produced by the Species Survival Commission (SSC) of the World Conservation Union (also known as the IUCN Red List - the acronym derived from its former name of the International Union for Conservation of Nature and Natural Resources). The Red List has no legislative power in Australia but is used as a framework for State and Commonwealth categories and criteria; and the
- DBCA Priority Fauna list. A non-legislative list maintained by DBCA for management purposes (DBCA 2019).

The *EPBC Act* also requires the compilation of a list of migratory species that are recognised under international treaties including the:

- Japan Australia Migratory Bird Agreement 1981 (JAMBA);
- China Australia Migratory Bird Agreement 1998 (CAMBA);
- Republic of Korea-Australia Migratory Bird Agreement 2007 (ROKAMBA); and
- Bonn Convention 1979 (The Convention on the Conservation of Migratory Species of Wild Animals).

(Note - Species listed under JAMBA are also protected under Schedule 5 of the *BC Act*.)

Most, but not all migratory bird species listed in the annexes to these bilateral agreements are also protected in Australia as matters of national environmental significance (NES) under the *EPBC Act*.

The conservation status of all vertebrate fauna species listed as occurring or possibly occurring in the vicinity of the survey area has been assessed using the most recent lists published in accordance with the above-mentioned instruments and is indicated as such in the fauna listings of this report. A full listing of conservation codes is provided in Appendix A.

2.4 LIKELIHOOD OF OCCURRENCE – VERTEBRATE FAUNA OF CONSERVATION SIGNIFICANCE

For vertebrate fauna of conservation significance identified during the desktop study as previously being recorded in the general, each was assessed and ranked for their likelihood of occurrence within the survey area itself.

The rankings and criteria used were:

- **Unlikely:** Survey area is outside of the currently documented distribution for the species in question or the species is generally accepted as being locally extinct (supported by a lack of recent records), or no suitable habitat (type, quality and extent) was identified as being present during the field assessment. Individuals of some species may occur occasionally as vagrants/transients especially if suitable habitat is located nearby but the survey area itself would not support a population or part population of the species.
- **Possible:** Survey area is within the known distribution of the species in question and habitat of at least marginal quality was identified as being present during the field assessment, supported in some cases by recent records being documented in literature from within or near the survey area. In some cases, while a species may be classified as possibly being present at times, habitat may be marginal (e.g. poor quality, fragmented, limited in extent) and therefore the frequency of occurrence and/or population levels may be low.
- **Known to Occur:** The species in question was positively identified as being present (for sedentary species) or as using the site as habitat for some other purpose (for non-sedentary/mobile species) during the field survey. This information may have been obtained by direct observation of individuals or by way of secondary evidence (e.g. foraging debris, scats). In some cases, while a species may be classified as known to occur, habitat may be marginal (e.g. poor quality, fragmented, limited in extent) and therefore the frequency of occurrence and/or population levels may be low.

2.5 TAXONOMY AND NOMENCLATURE

Taxonomy and nomenclature for fauna species used in this report is generally taken from the DBCA's WA Fauna Census Database which is assumed to follow Aplin and Smith (2001) for amphibians and reptiles and Johnstone (2001) for birds. Jackson and Groves (2015) has been used for mammals.

Common names are taken from the WAM recognised primary common name listings when specified, though where common names are not provided, they have been acquired from other publications. Sources include Cogger (2014), Wilson and Swan (2013), Van Dyck & Strahan (2013), Christidis and Boles (2008), Bush *et al.* (2010), Bush *et al.* (2007), Tyler & Doughty (2009), and Glauret (1961). Not all common names are generally accepted.

2.6 SURVEY LIMITATIONS

The fauna assessment was designed and carried out to conform with a Level 2 survey as defined in EPA Guidance Statement No. 56 (EPA 2016c). The assessment has included a desktop analysis aimed at providing a list of expected species and the completion of two-phase seasonal survey involving a detailed trapping program, targeted and opportunistic fauna observations, and the use of motion sensing cameras and bat detector recordings.

Fauna species are indicated as potentially present within this report based on there being suitable (quality and extent) habitat within the study area. With respect to trapping, targeted and opportunistic observations, the possibility exists that certain species may not have been detected during field investigations due to:

- seasonal inactivity during field survey;
- species present within micro habitats not surveyed;
- cryptic species able to avoid detection; and
- transient wide-ranging species not present during survey period.

The lack of observational data on some species should therefore not be taken as necessarily indicating that a species is absent from the site.

In recognition of survey limitations, a precautionary approach has been adopted for this assessment. Any fauna species that would possibly occur within the study area as identified through ecological databases, publications, discussions with local experts/residents and the habitat knowledge of the Author has been assumed to potentially occur in the study area.

Fauna survey limitations and constraints are summarised in Table 6.

Table 6: Fauna Survey Limitations and Constraints

Potential Constraint	Survey Limitation (Yes/No) Significant Moderate Negligible	Comments on Survey Outcomes
Competency/Experience of the consultant carrying out the survey;	No	Consultant Zoologists that executed the survey have both conducted many level 1 and level 2 surveys in WA and can be regarded as suitably qualified.
Scope	No	The survey carried out was a Level Two survey, comprising of a desktop survey and a two phase seasonal survey that has included a habitat assessment, trapping program, and opportunistic observations. No constraints encountered.
Proportion of fauna identified, recorded and/or collected	No	The field surveys recorded about 54% of listed potential vertebrate species considered likely to be present on site. It should be noted that the potential species list is very likely an over estimation of the species that use the proposal area on a regular basis.
Sources of information	Yes, Moderate	The Medcalf Project area has not been subject to detailed surveys in the past and specific fauna values are not well documented, though significant work has been done in nearby areas.
The proportion of the task achieved and further work	Yes, Moderate	The two phase survey has been completed. Some minor additional work on vertebrate species may be required once impact areas are finalised.

Potential Constraint	Survey Limitation (Yes/No) Significant Moderate Negligible	Comments on Survey Outcomes
Timing/weather/season/cycle	No	The survey was carried out November to coincide with the recommended “primary” survey period (EPA/DEC 2010). The second phase was carried out in Autumn, also in line with DWER/DBCA recommendations.
Disturbances (e.g. fire, flood, accidental human intervention etc.) which affected results of survey	Yes, Moderate	A large proportion of the site has been burnt in the recent past and is in the early stages of regrowth.
Intensity (in retrospect, was the intensity adequate)	No	Based on results achieved the survey is considered adequate for a two phase seasonal survey.
Completeness (e.g. was relevant area fully surveyed);	No	Density of trap lines and other survey sites/transects were above that generally carried out during the course of surveys of a similar type/area.
Resources (e.g. degree of expertise available in animal identification to taxon level);	Yes, Moderate	No unresolved problems/uncertainties arose with respect to identifying observed vertebrate fauna species.
Remoteness and/or access problems;	No	Majority of the study area was easily accessed.
Availability of contextual (e.g. biogeographic) information on the region.	No	Previous fauna survey data for the wider area, specialist books/publications and government databases were consulted.

3. REGIONAL CONTEXT

3.1 BIOGEOGRAPHIC SETTING

The project area is situated near the southern boundary of the Coolgardie Bioregion (COO2 – Southern Cross subregion - Cowan *et al.* 2001). The Southern Cross subregion is described as:

“The subregion has subdued relief, comprising gently undulating uplands dissected by broad valleys with bands of low greenstone hills. It lies on the 'Southern Cross Terrains' of the Yilgarn Craton. The granite strata of Yilgarn Craton are interrupted by parallel intrusions of Archaean Greenstone. Drainage is occluded. It has an arid to semi-arid Warm Mediterranean climate with 250-300 mm of mainly winter rainfall.

Valleys have Quaternary duplex and gradational soils, and include chains of saline playalakes. Diverse *Eucalyptus* woodlands (*Eucalyptus salmonophloia*, *E. salubris*, *E. transcontinentalis*, *E. longicornis*) rich in endemic eucalypts occur around these salt lakes, on the low greenstone hills, valley alluvials and broad plains of calcareous earths. The salt lake surfaces support dwarf shrublands of samphire. The granite basement outcrops at mid-levels in the landscape and supports swards of *Borya constricta*, with stands of *Acacia acuminata* and *Eucalyptus loxophleba*. Upper levels in the landscape are the eroded remnants of a lateritic duricrust yielding yellow sandplains, gravelly sandplains and laterite breakaways. Mallees (*Eucalyptus leptopoda*, *E. platycorys* and *E. scyphocalyx*) and scrub-heaths (*Allocasuarina corniculata*, *Callitris preissii*, *Melaleuca uncinata* and *Acacia beauverdiana*) occur on these uplands, as well as on sand lunettes associated with playas along the broad valley floors, and sand sheets around the granite outcrops. The scrubs are

rich in endemic acacias and Myrtaceae. The subregional area is 7,041,232 ha.” (Cowan *et al.* 2001).

3.2 PHYSICAL ENVIRONMENT

3.2.1 Climate

Salmon Gums is located about 93km south east of the survey area and is the closest weather station with current data (BOM 2014). Mean monthly maximum and minimum temperatures for the station (calculated from 1932 to 2013 data) range from 30.6°C to 16.1°C and 14.0°C to 4.6°C respectively (BOM 2014) (Figure 4).

Mean rainfall for the area ranges from 38 mm in June to 20 mm in December. The mean annual rainfall (calculated from 1932 to 2013 data) for the Salmon Gums station is 351.6 millimetres, with subtle increases above the monthly average during the May to September period (BOM 2014).

Figure 4: Mean Monthly Rainfall and Maximum and Minimum Temperatures (Salmon Gums Records 1932 – 2013, BOM 2014)

3.2.2 Topography, Land Systems and Geology

The Southern Cross subregion (COO2) lies on the Yilgarn Craton's 'Southern Cross Terrains'. The relief is subdued and comprises of gently undulating uplands dissected by broad valleys with bands of low greenstone hills. The underlying geology is of granite strata interrupted by parallel intrusions of Archaean Greenstone.

Calcareous earths are the dominant soil community and cover much of the plains and greenstone areas. A series of large playa lakes in the western half are the remnants of an ancient major drainage line (Cowan *et al.* 2001).

Beard (1990) describes the topography of the region as gently undulating with occasional ranges of low hills and sandplains in the western area and some large playa lakes. The dominant soil type is calcareous earth.

3.2.3 Fauna Habitat and Vegetation Mapping

Detailed vegetation/landform mapping of the study area has been undertaken by Botanica Consulting (2017). This information has been used to define broad scale terrestrial fauna habitats present within the study area as listed below (Table 7).

The extent of the identified units are shown in Figure 5. Most of the vegetation within the study area was in a state of regeneration after having been burnt during a series of fires in 2009/2010 (Botanica 2017). Additional details can be found in the associated flora and vegetation report (Botanica 2020). The quality of fauna habitats has shown minimal change since initial field assessments were initially conducted. However, as fauna habitats are subject to change overtime, and vertebrate assemblages may vary over time and space, a potential vertebrate fauna list has been compiled as detailed in Section 4.1 to account for any variation in fauna assemblages as vegetation matures.

Table 7: Fauna Habitats

Fauna Habitat	Description	Representative Fauna Habitat Attributes	Conservation Significant Species that possibly occur in habitat	Example Image
CLP - Clay Loam Plain-Eucalypt Woodland/ Mallee Woodland and Shrublands Total Area=1095 ha (59.1%)	Clay loam plain comprising a mosaic of open Salmon Gum woodland over mixed low shrubs and mallee shrubland over <i>Melaleuca pauperiflora</i> and mixed low shrubs.	- Range of vegetation strata suitable to a variety of passerine and nonpasserine birds. - Limited leaf litter due to the presence of smaller/ regrowth trees. - Relatively dense shrubs providing cover for small fauna. - Ground not especially suited to burrowing species.	Malleefowl <i>Leipoa ocellata</i> Peregrine Falcon <i>Falco peregrinus</i> Western Rosella (Inland ssp) <i>Platycercus icterotis xanthogenys</i> Carnaby's Black- Cockatoo <i>Calyptorhynchus latirostris</i> Chuditch <i>Dasyurus geoffroii</i> Western Brush Wallaby <i>Notamacropus irma</i> Central Long-eared Bat <i>Nyctophilus major tor</i> Lake Cronin Snake <i>Paroplocephalus atriceps</i>	
HS - Hillslope-Eucalypt Woodland/ Mallee Woodland and Shrubland/ Other Shrubland Total Area=677 ha (36.5%)	Rocky hillslopes (lateritic/ limonite) comprising a mosaic of regrowth Eucalypt woodland/ mallee woodland to shrubland over mixed Allocasuarina/ Hakea/ Melaleuca shrubland and low shrubland/ tussock grassland or sedges.	- Limited exfoliating bark. - Limited leaf litter due to the presence of smaller/ regrowth trees. - Limited vegetation strata due to the presence of smaller/ regrowth trees. - Limited dense shrubs. - Dominated by rocky areas less suitable for burrowing.	Peregrine Falcon <i>Falco peregrinus</i> Western Brush Wallaby <i>Notamacropus irma</i>	

Fauna Habitat	Description	Representative Fauna Habitat Attributes	Conservation Significant Species that possibly occur in habitat	Example Image
SLP - Sand Loam Plain-Mallee Woodland and Shrubland/ Other Shrubland Total Area=82 ha (4.4%)	Sand-loam plains comprising a mosaic of regrowth sparse mallee shrubland over low open shrubland of Acacia / Grevillea/ Melaleuca and open hummock grassland/ tussock grassland.	• Substrate very well suited to a variety of burrowing small mammals and reptiles. • Less diverse vegetation strata supporting a less diverse avifauna assemblage.	Peregrine Falcon <i>Falco peregrinus</i>

3.3 CONSERVATION RESERVES IN THE AREA

The Medcalf Project is located entirely within the proposed Bremer Range Nature Reserve which has a total area of 50,920ha. In 1992 the Bremer Range was proposed to be managed by the DBCA as a Nature Reserve as part of their south Coast Region, Regional Management Plan however to date this proposed reserve has not yet been approved (Botanica 2017).

The Bremer Range is a series of mineralised low hills, largely of greenstone with some banded ironstone, extending for 60 km along the south-eastern side of Lake Johnston and Lake Hope, to the north of the Norseman – Lake King Road (How *et. al.* 1988). The surrounding area consists of gently undulating uplands and a salt lake system that includes Lake Johnston and Lake Medcalf (Gibson & Lyons 1998).

The Medcalf Project area also lies within the Great Western Woodlands (DEC 2010), an area recognised by the Wilderness Society of WA to be of global biological and conservation importance as one of the largest and healthiest temperate woodlands on Earth, containing many endemic species. The region covers almost 16 million hectares (160,000 square kilometres) from the southern edge of the Western Australian Wheatbelt to the pastoral lands of the Mulga country in the north, the inland deserts to the northeast, and the treeless Nullarbor Plain to the east.

The area provides an eastward connection between southwest forests and inland deserts (Gondwana Link) as well as linking the north-west passage to Shark Bay. The majority of the Great Western Woodlands is unallocated crown land (61.1%) with other interests including pastoral leases (20.4%), conservation reserves (15.4%) unallocated crown land ex pastoral managed by the DBCA (2%) and private land (approximately 1%) (Watson *et. al.* 2008).

No specific management strategy applies to the Great Western Woodlands, rather an approach to conservation which occurs across all land tenures and when different stakeholders work together, with biodiversity in mind. The central component of this approach is to identify and conserve key large-scale, long term ecological processes that drive connectivity between ecosystems and species. The Great Western Woodlands currently includes towns, highways, roads, railways, private property, Crown Reserves, agricultural activities and mining tenements.

4. SURVEY RESULTS

4.1 FAUNA INVENTORY - DESKTOP REVIEW

A list of expected fauna species likely to occur in the study area was compiled from information obtained during the desktop study and is presented in Appendix D. This listing was refined after information gathered during the various site surveys were reviewed. The results of some previous fauna surveys carried out in the general area are summarised in this species listing as are the DBCA NatureMap database search results. The raw database search results from NatureMap (DBCA 2017) and the Protected Matters Search Tool (DotEE 2017) are contained within Appendix C.

Table 8 below provides a summary of the potential fauna species considered most likely to be present based on species group and conservation status. The list of potential fauna takes into consideration that firstly the species in question is not known to be locally extinct and secondly that suitable habitat for each species, as identified during the field work, is present within the study area, though compiling an accurate list has limitations.

The specific habitat and microhabitat requirements and ecology of many of the species known to occur in the wider area are often not well understood and/or documented. It can therefore be difficult to exclude species from the potential list based on a lack of a specific habitat or microhabitat within the study area. As a consequence of this limitation the potential fauna list produced is most likely an overestimation of those species that actually utilise the study area for some purpose. Some species may be present in the general area but may only use the study area itself on rare occasions or as vagrants/transients. The majority of the potential species are common widespread species and at any one time a subset of the total potential vertebrate species could occur within the study area with the range and number of species varying overtime.

Table 8: Summary of Potential Vertebrate Fauna Species (as listed in Appendix D)

Group	Total number of potential species	Potential number of <u>specially protected</u> species	Potential number of <u>migratory</u> species	Potential number of <u>priority</u> species
Amphibians	12	0	0	0
Reptiles	65	0	0	1
Birds	120	3	0	1
Non-Volant Mammals	24 ⁵	1	0	1
Volant Mammals (Bats)	9	0	0	1
Total	230⁵	4	0	4

Superscript = number of introduced species included in total.

4.2 FAUNA INVENTORY – DETAILED FAUNA SURVEY

A summary of the number of species from each vertebrate group identified during the Phase 1 and Phase 2 fauna survey is provided in Table 9 below. A complete list of the species identified is detailed in Appendix D. The raw trapping, recording and opportunistic results are provided in Appendix E.

The survey identified 54% of the predicted species considered likely to be present. It should be noted that the potential species list is very likely an over estimation of the species that use the proposal area on a regular basis. Two of the possible nine vertebrate fauna species of conservation significance considered likely to frequent the area at times (albeit some rarely) were observed/recorded. This comprised one priority bird species and one priority bat species.

Table 9: Number of Vertebrate Fauna Species Recorded

Group	Combined Phase 1 & 2 Total	Species of Conservation Significance
Amphibians	1	0
Reptiles	32	0
Birds	68	1
Native Non-Volant Mammals	10	0
Bats	8	1
Introduced Mammals	5	0
Total	124	2

Total number of species recorded = the total number of species found to occur in the defined study area, including species found outside of main impact areas

4.2.1 Amphibians

One species of frog (*Pseudophryne occidentalis* – western toadlet) was captured several times at trap site 1 (major drainage line – dry at time of surveys) during both phases of the field survey. Based on the desktop study results another eleven species may occur in the general area, subject to suitable habitat being present.

None of the identified or potential amphibian species that may occur in the area are listed as threatened, migratory or as DBCA priority species.

4.2.2 Reptiles

A total of 32 species of reptile were captured and/or observed during the field surveys. Based on the desktop study results another 33 species may occur in the general area, subject to suitable habitat being present. None of the reptile species captured are of conservation significance.

The only reptile species of conservation significance considered likely to occur in the general area is the Lake Cronin snake (*Paroplocephalus atriceps* - Priority 3). This species occurs naturally in low densities and therefore detecting individuals can be difficult even if present. The fact that the study area has been repeatedly burnt in recent times may have made the habitat marginal in quality (assuming it was suitable in the first instance) for this species to utilise. As with other fauna species of conservation significance the species

likelihood of occurrence is however largely based on documented records and not just the presence/absence of apparently suitable habitat (pre-fire) or direct observation.

4.2.3 Birds

Sixty-eight bird species were observed in or near the study area during the field survey. Based on the desktop study results another 50 species may occur in the general area, subject to suitable habitat being present.

One species of conservation significance was observed. The locations of the observations are shown in Figure 6.

The inland sub-species of the western rosella (*Platycercus icterotis xanthogenys*) is classified as Priority 4 by DBCA. This species was observed on five occasions in small groups (two to seven individuals) at trap site 1 and 3 and in similar woodland/forest vegetation in the north western section of the study area.

An additional three species of conservation significant species may occur in the area, these being the malleefowl (*Leipoa ocellata* –Vulnerable), peregrine falcon (*Falco peregrinus* – Other Specially Protected) and Carnaby's black-cockatoo (*Calyptorhynchus latirostris* – Endangered).

No evidence of malleefowl using the study area and in particular no evidence of breeding (i.e. nest mounds recent or old) was observed despite a high density of traverses (by both fauna and botanical teams) over the entire study area and in particular likely impact areas (Figure 7). The results suggest the study area is not a site of significance for the species though individuals may at times frequent the location while in transit. The current state of most of the vegetation (recently burnt) also makes much marginal in quality as habitat, though the lack of any mounds (recent or old) suggest it was not utilised in any event. Rocky areas in proposed open pit locations appear totally unsuitable.

The status of the remaining species in the area is difficult to determine. Peregrine falcons are uncommon but have large home ranges so individuals may forage over the study area at times even if they are not resident in the specific area. The study area is at the extreme north eastern edge of Carnaby's black-cockatoos current documented range though it may occur occasionally.

4.2.4 Native Non-Volant Mammals

A total of ten, non-flying native mammal species were captured and/or observed during the field surveys. Based on the desktop study results another nine species may occur in the general area, subject to suitable habitat being present.

No species of conservation significance were recorded.

The targeted trapping program and the deployment of camera traps aimed at determining the presence of the chuditch (*Dasyurus geoffroii* –Vulnerable) failed to capture/detect any individuals. These results suggest, given the relatively small size of the survey area, the

density of traps, number of trap nights over two seasons and over 1,000 camera trap days, that the species is absent from the area or at best present in extremely low numbers. The presence of feral predators (cats and foxes) would also make it difficult for a population to persist in the area though transient individuals may occur on occasions. As previously indicated despite some habitats being burnt and therefore possibly sub-optimal it is the authors opinion that there was sufficient unburnt and advanced regrowth habitat in the survey area and surrounds to support chuditch individuals if in fact present, allowing the opportunity for their detection during the surveys.

The study area is at the extreme eastern edge of the western brush wallaby's (*Notamacropus irma* - Priority 4) current documented range and this coupled with the diminished quality of the habitat as a consequence of recent fires may make the area unsuitable or at best very marginal for this species. It has been listed as a potential species but the probability of occurrence can be regarded as low. As with the chuditch and other fauna species of conservation significance the species likelihood of occurrence is largely based on documented records and not just the presence/absence of apparently suitable habitat (pre-fire) or direct observation.

4.2.5 Bats

A total of eight bat species were recorded during the both phases of the field survey. Based on the desktop study results one other species of bat may occur in the general area, subject to suitable habitat being present.

One species of conservation significance, the central long-eared bat (*Nyctophilus major tor*), classified as Priority 3 by DBCA, was recorded on three occasions within the study area, near trap site 3, near trap site 6 and once at a location near the study areas southern boundary (see Figure 6). The species was also recorded at Lake Medcalf. This central long-eared bat has a wide distribution in arid areas along the southern coast of WA, east to Eyre Peninsula in South Australia and in general is considered to be common despite its Priority 4 classification.

4.2.6 Introduced Mammals

Five introduced mammal species were identified as being present during the field survey, these being the camel, cat, fox, rabbit and the house mouse.

5. POTENTIAL IMPACTS ON VERTEBRATE FAUNA OF CONSERVATION SIGNIFICANCE

While the exact location and extent of mining and associated infrastructure within the study area is not as yet finalised the possible impact on specific species of conservation significance recorded or potentially present in the general area, based on currently available information is provided in Table 10 below. These conclusions will need to be reviewed when final planning for the proposed mine are completed and input from regulatory authorities received.

Table 10: Likelihood of Occurrence and Possible Impacts – Fauna Species of Conservation Significance (continues on following pages)

Species	Conservation Status (see Appendix A for codes)			Habitat Present	Likelihood of Occurrence	Maximum Possible Impact
	EPBC Act	BC Act	DBCA Priority			
Lake Cronin Snake <i>Paroplocephalus atriceps</i>	-	-	P3	Yes/Marginal?	Possible, though no evidence of current use	Loss/modification of small areas of potential habitat. No significant impact likely.
Malleefowl <i>Leipoa ocellata</i>	VU	VU	-	Yes/Marginal?	Possible, though no evidence of current or previous use	Loss/modification of small areas of potential habitat. No significant impact likely.
Peregrine Falcon <i>Falco peregrinus</i>	-	OS	-	Yes/Marginal?	Possible, though no evidence of current use	Loss/modification of an area of potential habitat. No significant impact likely.
Migratory Shorebirds and Seabirds	MI	MI	Various	No	Unlikely.	No impact.
Grey Wagtail <i>Motacilla cinerea</i>	MI	MI	-	No	Would not Occur	No impact.
Hooded Plover <i>Charadrius rubricollis</i>	-	-	P4	No	Unlikely.	No impact.
Western Rosella (Inland ssp) <i>Platycercus icterotis xanthogenys</i>	-	-	P4	Yes	Known to occur	Loss/modification of a small area of potential habitat. No significant impact likely.
Carnaby's Black- Cockatoo <i>Calyptrorhynchus latirostris</i>	EN	EN	-	Yes/Marginal?	Possible, though no evidence of current use	Loss/modification of small areas of potential habitat. No significant impact likely.
Fork-tailed Swift <i>Apus pacificus</i>	MI	MI	-	Yes	Flyover only.	No impact.
Chuditch <i>Dasyurus geoffroii</i>	VU	VU	-	Yes/Marginal?	Possible, though no evidence of current use	Loss/modification of small areas of potential habitat. No significant impact likely.

Species	Conservation Status (see Appendix A for codes)			Habitat Present	Likelihood of Occurrence	Maximum Possible Impact
	EPBC Act	BC Act	DBCA Priority			
Western Brush Wallaby <i>Notamacropus irma</i>	-	-	P4	Yes/Marginal?	Possible, though no evidence of current use	Loss/modification of small areas of potential habitat. No significant impact likely.
Central Long-eared Bat <i>Nyctophilus major tor</i>	-	-	P3	Yes	Known to occur.	Loss/modification of a small area of potential habitat. No significant impact likely.

Despite the potential for the loss of habitat in use or possibly suitable for some species of conservation significance, the assessment suggests that no species has the potential to be affected to any significant degree by the proposal to develop a mine in the area. Evidence gathered to date suggests that a significant proportion of the species discussed are locally extinct or unlikely to use the site due to a lack of suitable habitat.

Those species that potentially utilise the site have relatively wide ranging distributions and/or will persist in adjoining unaffected areas given the presence of extensive areas of similar habitat nearby. It is not anticipated that the loss/modification of small areas of habitat on a local scale will result in a change in the status of any fauna species (i.e. cause population decline or localised extinction).

Of primary interest is that fact that no evidence of the chuditch or the malleefowl was found within the areas investigated. This would suggest that both species are absent from the area or that the area is not of particular importance to either species. At this stage therefore, it is considered unlikely that development of a mine at the site will have any significant impact on either of these species or their preferred habitat. As previously mentioned the likelihood of occurrence for species which remained undetected is largely based on documented records (and in the case of the malleefowl – nest mounds) and not just the presence/absence of apparently suitable habitat (pre-fire) or direct observation.

6. CONCLUSION & RECOMMENDATIONS

The two-phase seasonal Level 2 fauna survey within the Medcalf Vanadium Project Area was undertaken during November 2013 and March 2014 for the purposes of providing baseline data on the fauna assemblages present and to identify possible development constraints.

The field survey recorded 119 native and five introduced vertebrate species. The identified assemblage included one species of frog, 32 species of reptiles, 68 species of birds, and 18 native mammals (including 8 species of bat). Two species of conservation significance were recorded, these being the inland sub-species of the western rosella (Priority 4), and the central long-eared bat (Priority 3).

No evidence of two fauna species of primary interest, the chuditch or the malleefowl (both classified as Vulnerable on state and federal lists) was found within the areas investigated despite targeted trapping and surveys being carried out.

Evidence gathered to date suggests that no vertebrate fauna species of conservation significance has the potential to be affected to any significant degree by the proposal to develop a mine in the area given that most have wide ranging distributions and/or will persist in adjoining unaffected areas given the presence of extensive areas of similar habitat nearby. It is therefore not anticipated that the loss/modification of small areas of habitat on a local scale will result in a change in the status of any fauna species (i.e. cause population decline or localised extinction).

This conclusion will need to be reviewed when final planning for the proposed mine are completed.

Based on the fauna survey results reported on here it is recommended that:

- The results of the fauna survey should be provided to the relevant regulatory authorities (e.g. DBCA) and interest groups for review and comment so as to ensure ongoing compliance with their current or future requirements.
- Ongoing planning for development should aim to locate infrastructure so as to minimise as much as reasonable and practical the area of remnant vegetation requiring removal. Existing cleared areas/tracks should be used in preference to clearing additional areas. Areas of larger trees should be avoided if possible as they have the potential to provide significant microhabitats (e.g. tree hollows).
- Infrastructure should be positioned to avoid or minimise the disruption to surface and sub-surface hydrology where possible. Levees and drains designed to mimic natural drainage flows should be incorporated in plans where disruptions may occur.
- If the mining proposal proceeds, a fauna management plan should be formulated with reference to the above mentioned recommendations, where considered relevant, with the aim of minimising impacts on fauna during construction and ongoing operations at the propose mine site. The management plan should also

include aspects of feral animal management in particular in relation to cats and foxes so that activities such as rubbish disposal do not encourage or result in an increase in population numbers (for example).

- Based on the results obtained to date, no referral of the project to the federal Department of the Environment with respect to likely impacts on *EPBC Act* listed fauna species is considered warranted given that none appear to be utilising the site to any significant degree.

APPENDIX A

Conservation Categories

EPBC Act (1999) Threatened Fauna Categories

Threatened fauna may be listed under Section 178 of the *Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act)* in any one of the following categories:

Category	Code	Description
Extinct	E	There is no reasonable doubt that the last member of the species has died.
*Extinct in the wild	EW	A species (a) is known only to survive in cultivation, in captivity or as a naturalised population well outside its past range; or (b) has not been recorded in its known and/or expected habitat, at appropriate seasons, anywhere in its past range, despite exhaustive surveys over a time frame appropriate to its life cycle and form.
*Critically Endangered	CE	A species is facing an extremely high risk of extinction in the wild in the immediate future.
*Endangered	EN	A species: (a) is not critically endangered; and (b) is facing a very high risk of extinction in the wild in the near future.
*Vulnerable	VU	A species (a) is not critically endangered or endangered; and (b) is facing a high risk of extinction in the wild in the medium-term future.
Conservation Dependent	CD	A species is the focus of a specific conservation program the cessation of which would result in the species becoming vulnerable, endangered or critically endangered
*Migratory	Migratory	(a) all migratory species that are: (i) native species; and (ii) from time to time included in the appendices to the Bonn Convention; and (b) all migratory species from time to time included in annexes established under JAMBA, CAMBA and ROKAMBA; and (c) all native species from time to time identified in a list established under, or an instrument made under, an international agreement approved by the Minister.
Marine	Ma	Species in the list established under s248 of the <i>EPBC Act</i>

Note: Only species in those categories marked with an asterix are matters of national environmental significance (NES) under the *EPBC Act*.

Wildlife Conservation (Specially Protected Fauna) Notice 2015 Categories

Published as Specially Protected under the *Wildlife Conservation Act 1950*, and listed under Schedules 1 to 7 of the Wildlife Conservation (Specially Protected Fauna) Notice.

The assessment of the conservation status of these species is based on their national extent and ranked according to their level of threat using IUCN Red List categories and criteria as detailed below.

Category	Code	Description
Schedule 1 Critically Endangered species	CR	Threatened species considered to be facing an extremely high risk of extinction in the wild.
Schedule 2 Endangered species	EN	Threatened species considered to be facing a very high risk of extinction in the wild.
Schedule 3 Vulnerable species	VU	Threatened species considered to be facing a high risk of extinction in the wild.
Schedule 4 Presumed extinct species	EX	Species which have been adequately searched for and there is no reasonable doubt that the last individual has died.
Schedule 5 Migratory birds protected under an international agreement	IA	Birds that are subject to an agreement between the government of Australia and the governments of Japan (JAMBA), China (CAMBA) and The Republic of Korea (ROKAMBA), and the Bonn Convention, relating to the protection of migratory birds.
Schedule 6 Fauna that is of special conservation need as conservation dependent fauna	CD	Fauna of special conservation need being species dependent on ongoing conservation intervention to prevent it becoming eligible for listing as threatened.
Schedule 7 Other specially protected fauna.	OS	Fauna otherwise in need of special protection to ensure their conservation.

Western Australian DPaW Priority Fauna Categories

Possibly threatened species that do not meet survey criteria, or are otherwise data deficient, are added to the Priority Fauna under Priorities 1, 2 or 3. These three categories are ranked in order of priority for survey and evaluation of conservation status so that consideration can be given to their declaration as threatened flora or fauna.

Species that are adequately known, are rare but not threatened, or meet criteria for near threatened, or that have been recently removed from the threatened species or other specially protected fauna lists for other than taxonomic reasons, are placed in Priority 4. These species require regular monitoring.

Assessment of Priority codes is based on the Western Australian distribution of the species, unless the distribution in WA is part of a contiguous population extending into adjacent States, as defined by the known spread of locations.

Category	Code	Description
Priority 1 Poorly Known Species.	P1	Species that are known from one or a few locations (generally five or less) which are potentially at risk. All occurrences are either: very small; or on lands not managed for conservation, e.g. agricultural or pastoral lands, urban areas, road and rail reserves, gravel reserves and active mineral leases; or otherwise under threat of habitat destruction or degradation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under immediate threat from known threatening processes. Such species are in urgent need of further survey.
Priority 2 Poorly Known Species.	P2	Species that are known from one or a few locations (generally five or less), some of which are on lands managed primarily for nature conservation, e.g. national parks, conservation parks, nature reserves and other lands with secure tenure being managed for conservation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under threat from known threatening processes. Such species are in urgent need of further survey.
Priority 3 Poorly Known Species.	P3	Species that are known from several locations and the species does not appear to be under imminent threat, or from few but widespread locations with either large population size or significant remaining areas of apparently suitable habitat, much of it not under imminent threat. Species may be included if they are comparatively well known from several locations but do not meet adequacy of survey requirements and known threatening processes exist that could affect them. Such species are in need of further survey.
Priority 4 Rare, Near Threatened and other species in need of monitoring.	P4	(a) Rare: Species that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection, but could be if present circumstances change. These species are usually represented on conservation lands. (b) Near Threatened: Species that are considered to have been adequately surveyed and that do not qualify for Conservation Dependent, but that are close to qualifying for Vulnerable. (c) Species that have been removed from the list of threatened species during the past five years for reasons other than taxonomy.

*Species includes all taxa (plural of taxon - a classificatory group of any taxonomic rank, e.g. a family, genus, species or any infraspecific category i.e. subspecies or variety, or a distinct population).

IUCN Red List Threatened Species Categories

The *IUCN Red List of Threatened Species*[™] is a checklist of taxa that have undergone an extinction risk assessment using the *IUCN Red List Categories and Criteria*.

Categories are summarized below.

Category	Code	Description
Extinct	EX	Taxa for which there is no reasonable doubt that the last individual has died.
Extinct in the Wild	EW	Taxa which is known only to survive in cultivation, in captivity or and as a naturalised population well outside its past range and it has not been recorded in known or expected habitat despite exhaustive survey over a time frame appropriate to its life cycle and form.
Critically Endangered	CR	Taxa facing an extremely high risk of extinction in the wild.
Endangered	EN	Taxa facing a very high risk of extinction in the wild.
Vulnerable	VU	Taxa facing a high risk of extinction in the wild.
Near Threatened	NT	Taxa which has been evaluated but does not qualify for CR, EN or VU now but is close to qualifying or likely to qualify in the near future.
Least Concern	LC	Taxa which has been evaluated but does not qualify for CR, EN, VU, or NT but is likely to qualify for NT in the near future.
Data Deficient	DD	Taxa for which there is inadequate information to make a direct or indirect assessment of its risk of extinction based on its distribution and/or population status.
Not Evaluated	NE	Taxa which has not been evaluated.

A full list of categories and their meanings are available at:

2 - Priority 2
3 - Priority 3
4 - Priority 4
5 - Priority 5

Name ID Species Name Naturalised Conservation Code ¹Endemic To Query Area

¹ For NatureMap's purposes, species flagged as endemic are those whose records are wholly contained within the search area. Note that only those records complying with the search criterion are included in the calculation. For example, if you limit records to those from a specific datasource, only records from that datasource are used to determine if a species is restricted to the query area.

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected.

Information on the coverage of this report and qualifications on data supporting this report are contained in the caveat at the end of the report.

Information is available about [Environment Assessments](#) and the EPBC Act including significance guidelines, forms and application process details.

Report created: 12/02/20 13:46:09

Summary

Matters of National Environmental Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the [Administrative Guidelines on Significance](#).

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance:	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	None
Listed Threatened Ecological Communities:	None
Listed Threatened Species:	4
Listed Migratory Species:	6

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at <http://www.environment.gov.au/heritage>

A [permit](#) may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Land:	None
Commonwealth Heritage Places:	None
Listed Marine Species:	10
Whales and Other Cetaceans:	None
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	None

Extra Information

This part of the report provides information that may also be relevant to the area you have nominated.

State and Territory Reserves:	None
Regional Forest Agreements:	None
Invasive Species:	6
Nationally Important Wetlands:	None
Key Ecological Features (Marine)	None

Details

Matters of National Environmental Significance

Listed Threatened Species		[Resource Information]
Name	Status	Type of Presence
Birds		

Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area
Leipoa ocellata Malleefowl [934]	Vulnerable	Species or species habitat likely to occur within area

Mammals		
Dasyurus geoffroii Chuditch, Western Quoll [330]	Vulnerable	Species or species habitat may occur within area

Plants		
Banksia sphaerocarpa var. dolichostyla Ironcaps Banksia, Ironcap Banksia [10518]	Vulnerable	Species or species habitat may occur within area

Listed Migratory Species		[Resource Information]
* Species is listed under a different scientific name on the EPBC Act - Threatened Species list.		
Name	Threatened	Type of Presence
Migratory Marine Birds		

Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area
---	--	--

Migratory Terrestrial Species		
Motacilla cinerea Grey Wagtail [642]		Species or species habitat may occur within area

Migratory Wetlands Species		
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat may occur within area

Calidris acuminata Sharp-tailed Sandpiper [874]		Species or species habitat may occur within area
--	--	--

Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area
---	-----------------------	--

Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat may occur within area
--	--	--

Other Matters Protected by the EPBC Act

Listed Marine Species		[Resource Information]
* Species is listed under a different scientific name on the EPBC Act - Threatened Species list.		
Name	Threatened	Type of Presence
Birds		
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat may occur within area
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area
Ardea alba Great Egret, White Egret [59541]		Species or species habitat likely to occur within area
Ardea ibis Cattle Egret [59542]		Species or species habitat may occur within area
Calidris acuminata Sharp-tailed Sandpiper [874]		Species or species habitat may occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat may occur within area
Chrysococcyx osculans Black-eared Cuckoo [705]		Species or species habitat likely to occur within area
Merops ornatus Rainbow Bee-eater [670]		Species or species habitat may occur within area
Motacilla cinerea Grey Wagtail [642]		Species or species habitat may occur within area

Extra Information

Invasive Species		[Resource Information]
Weeds reported here are the 20 species of national significance (WoNS), along with other introduced plants that are considered by the States and Territories to pose a particularly significant threat to biodiversity. The following feral animals are reported: Goat, Red Fox, Cat, Rabbit, Pig, Water Buffalo and Cane Toad. Maps from Landscape Health Project, National Land and Water Resources Audit, 2001.		
Name	Status	Type of Presence
Mammals		
Camelus dromedarius Dromedary, Camel [7]		Species or species habitat likely to occur within area
Canis lupus familiaris Domestic Dog [82654]		Species or species habitat likely to occur within area
Felis catus Cat, House Cat, Domestic Cat [19]		Species or species habitat likely to occur

Name	Status	Type of Presence
Oryctolagus cuniculus Rabbit, European Rabbit [128]		within area Species or species habitat likely to occur within area
Vulpes vulpes Red Fox, Fox [18]		Species or species habitat likely to occur within area
Plants		
Carrichtera annua Ward's Weed [9511]		Species or species habitat likely to occur within area

Caveat

The information presented in this report has been provided by a range of data sources as acknowledged at the end of the report.

This report is designed to assist in identifying the locations of places which may be relevant in determining obligations under the Environment Protection and Biodiversity Conservation Act 1999. It holds mapped locations of World and National Heritage properties, Wetlands of International and National Importance, Commonwealth and State/Territory reserves, listed threatened, migratory and marine species and listed threatened ecological communities. Mapping of Commonwealth land is not complete at this stage. Maps have been collated from a range of sources at various resolutions.

Not all species listed under the EPBC Act have been mapped (see below) and therefore a report is a general guide only. Where available data supports mapping, the type of presence that can be determined from the data is indicated in general terms. People using this information in making a referral may need to consider the qualifications below and may need to seek and consider other information sources.

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species distributions have been derived through a variety of methods. Where distributions are well known and if time permits, maps are derived using either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc) together with point locations and described habitat; or environmental modelling (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where very little information is available for species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc). In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More reliable distribution mapping methods are used to update these distributions as time permits.

Only selected species covered by the following provisions of the EPBC Act have been mapped:

- migratory and
- marine

The following species and ecological communities have not been mapped and do not appear in reports produced from this database:

- threatened species listed as extinct or considered as vagrants
- some species and ecological communities that have only recently been listed
- some terrestrial species that overfly the Commonwealth marine area
- migratory species that are very widespread, vagrant, or only occur in small numbers

The following groups have been mapped, but may not cover the complete distribution of the species:

- non-threatened seabirds which have only been mapped for recorded breeding sites
- seals which have only been mapped for breeding sites near the Australian continent

Such breeding sites may be important for the protection of the Commonwealth Marine environment.

APPENDIX E

Raw Vertebrate Trapping & Recording Results

Phase 1 & 2

Trap Results

Date	Trap Site	Trap Type	Species	Common Name
12/11/2013	Field Camp	Opportunistic	<i>Pogona minor minor</i>	Western Bearded Dragon
12/11/2013	TS 1.1	Funnel	<i>Echiopsis curta</i>	Bardick
12/11/2013	TS 1.1	Funnel	<i>Menetia greyii</i>	Dwarf Skink
12/11/2013	TS 1.1	Funnel	<i>Diplodactylus granariensis</i>	Wheatbelt Stone Gecko
12/11/2013	TS 1.10	Bucket	<i>Diplodactylus granariensis</i>	Wheatbelt Stone Gecko
12/11/2013	TS 1.2	Bucket	<i>Cercartetus concinnus</i>	Western Pygmy-possum
12/11/2013	TS 1.2	Funnel	<i>Christinus marmoratus</i>	Marbled Gecko
12/11/2013	TS 1.3	Bucket	<i>Cercartetus concinnus</i>	Western Pygmy-possum
12/11/2013	TS 1.3	Funnel	<i>Delma australis</i>	Marble-faced Delma
12/11/2013	TS 1.3	Funnel	<i>Gehyra variegata</i>	Variegated Dtella
12/11/2013	TS 1.3	Funnel	<i>Gehyra variegata</i>	Variegated Dtella
12/11/2013	TS 1.5	Bucket	<i>Cryptoblepharus buchananii</i>	Buchanan's Snake-eyed Skink
12/11/2013	TS 1.5	Bucket	<i>Diplodactylus granariensis</i>	Wheatbelt Stone Gecko
12/11/2013	TS 1.5	Bucket	<i>Cercartetus concinnus</i>	Western Pygmy-possum
12/11/2013	TS 1.6	Funnel	<i>Morethia butleri</i>	Woodland Dark-flecked Morethia
12/11/2013	TS 1.7	Funnel	<i>Diplodactylus granariensis</i>	Wheatbelt Stone Gecko
12/11/2013	TS 1.8	Bucket	<i>Diplodactylus granariensis</i>	Wheatbelt Stone Gecko
12/11/2013	TS 1.8	Bucket	<i>Diplodactylus granariensis</i>	Wheatbelt Stone Gecko
12/11/2013	TS 1.9	Funnel	<i>Morethia butleri</i>	Woodland Dark-flecked Morethia
12/11/2013	TS 1.9	Funnel	<i>Diplodactylus granariensis</i>	Wheatbelt Stone Gecko
12/11/2013	wpt011	Cage	<i>Mus musculus</i>	House Mouse
13/11/2013	Bat Site 1	SM2+ Bat Call Recording	<i>Chalinolobus gouldii</i>	Gould's Wattled Bat
13/11/2013	Bat Site 1	SM2+ Bat Call Recording	<i>Nyctophilus geoffroyi</i>	Lesser Long-eared Bat
13/11/2013	Opportunistic Site 3	Opportunistic	<i>Ctenophorus cristatus</i>	Crested Bicycle Dragon
13/11/2013	TS 1.1	Funnel	<i>Diplodactylus granariensis</i>	Wheatbelt Stone Gecko
13/11/2013	TS 1.1	Funnel	<i>Crenadactylus ocellatus ocellatus</i>	Clawless Gecko
13/11/2013	TS 1.10	Bucket	<i>Diplodactylus granariensis</i>	Wheatbelt Stone Gecko
13/11/2013	TS 1.10	Bucket	<i>Diplodactylus granariensis</i>	Wheatbelt Stone Gecko
13/11/2013	TS 1.2	Funnel	<i>Morethia obscura</i>	Shrubland Pale-flecked Morethia
13/11/2013	TS 1.5	Bucket	<i>Cryptoblepharus buchananii</i>	Buchanan's Snake-eyed Skink
13/11/2013	TS 1.5	Funnel	<i>Morethia obscura</i>	Shrubland Pale-flecked Morethia

Date	Trap Site	Trap Type	Species	Common Name
13/11/2013	TS 1.6	Funnel	<i>Diplodactylus granariensis</i>	Wheatbelt Stone Gecko
13/11/2013	TS 1.6	Bucket	<i>Lucasium maini</i>	Main's Ground Gecko
13/11/2013	TS 1.8	Bucket	<i>Menetia greyii</i>	Dwarf Skink
13/11/2013	TS 1.9	Funnel	<i>Lialis burtonis</i>	Burton's Legless Lizard
13/11/2013	TS 1.9	Funnel	<i>Morethia obscura</i>	Shrubland Pale-flecked Morethia
13/11/2013	TS 1.9	Funnel	<i>Morethia butleri</i>	Woodland Dark-flecked Morethia
13/11/2013	TS 1.9	Bucket	<i>Morethia obscura</i>	Shrubland Pale-flecked Morethia
13/11/2013	TS 1.9	Bucket	<i>Cercartetus concinnus</i>	Western Pygmy-possum
13/11/2013	TS 2.2	Funnel	<i>Morethia obscura</i>	Shrubland Pale-flecked Morethia
13/11/2013	TS 2.3	Bucket	<i>Lerista distinguenda</i>	SW Four-toed Lerista
13/11/2013	TS 2.4	Funnel	<i>Lerista distinguenda</i>	SW Four-toed Lerista
13/11/2013	TS 2.7	Bucket	<i>Morethia obscura</i>	Shrubland Pale-flecked Morethia
13/11/2013	TS 2.7	Bucket	<i>Pogona minor minor</i>	Western Bearded Dragon
13/11/2013	TS 2.8	Elliot (B)	<i>Mus musculus</i>	House Mouse
13/11/2013	TS 3.1	Funnel	<i>Sminthopsis granulipes</i>	White-tailed Dunnart
13/11/2013	TS 3.10	Funnel	<i>Diplodactylus granariensis</i>	Wheatbelt Stone Gecko
13/11/2013	TS 3.2	Funnel	<i>Egernia richardi</i>	Woodland Crevice Skink
13/11/2013	TS 3.2	Funnel	<i>Underwoodisaurus milii</i>	Barking Gecko
13/11/2013	TS 3.3	Bucket	<i>Cercartetus concinnus</i>	Western Pygmy-possum
13/11/2013	TS 3.3	Funnel	<i>Diplodactylus granariensis</i>	Wheatbelt Stone Gecko
13/11/2013	TS 3.4	Bucket	<i>Cercartetus concinnus</i>	Western Pygmy-possum
13/11/2013	TS 3.7	Bucket	<i>Diplodactylus granariensis</i>	Wheatbelt Stone Gecko
13/11/2013	TS 3.7	Funnel	<i>Diplodactylus granariensis</i>	Wheatbelt Stone Gecko
13/11/2013	TS 3.8	Funnel	<i>Diplodactylus granariensis</i>	Wheatbelt Stone Gecko
13/11/2013	TS 3.9	Funnel	<i>Diplodactylus granariensis</i>	Wheatbelt Stone Gecko
13/11/2013	TS 3.9	Bucket	<i>Mus musculus</i>	House Mouse
13/11/2013	TS 3.9	Funnel	<i>Morethia obscura</i>	Shrubland Pale-flecked Morethia

DISCLAIMER

This fauna assessment report (“the report”) has been prepared in accordance with the scope of services set out in the contract, or as otherwise agreed, between the Client and Greg Harewood (“the Author”). In some circumstances the scope of services may have been limited by a range of factors such as time, budget, access and/or site disturbance constraints. In accordance with the scope of services, the Author has relied upon the data and has conducted environmental field monitoring and/or testing in the preparation of the report. The nature and extent of monitoring and/or testing conducted is described in the report.

The conclusions are based upon field data and the environmental monitoring and/or testing carried out over a limited period of time and are therefore merely indicative of the environmental condition of the site at the time of preparing the report. Also it should be recognised that site conditions, can change with time.

Within the limitations imposed by the scope of services, the field assessment and preparation of this report have been undertaken and performed in a professional manner, in accordance with generally accepted practices and using a degree of skill and care ordinarily exercised by reputable environmental consultants under similar circumstances. No other warranty, expressed or implied, is made.

In preparing the report, the Author has relied upon data, surveys, analyses, designs, plans and other information provided by the Client and other individuals and organisations, most of which are referred to in the report (“the data”). Except as otherwise stated in the report, the Author has not verified the accuracy or completeness of the data. To the extent that the statements, opinions, facts, information, conclusions and/or recommendations in the report (“conclusions”) are based in whole or part on the data, those conclusions are contingent upon the accuracy and completeness of the data. The Author will not be liable in relation to incorrect conclusions should any data, information or condition be incorrect or have been concealed, withheld, misrepresented or otherwise not fully disclosed to the Author.

The report has been prepared for the benefit of the Client and no other party. The Author assumes no responsibility and will not be liable to any other person or organisation for or in relation to any matter dealt with or conclusions expressed in the report, or for any loss or damage suffered by any other person or organisation arising from matters dealt with or conclusions expressed in the report (including without limitation matters arising from any negligent act or omission of the Author or for any loss or damage suffered by any other party relying upon the matters dealt with or conclusions expressed in the report). Other parties should not rely upon the report or the accuracy or completeness of any conclusions and should make their own enquiries and obtain independent advice in relation to such matters.

The Author will not be liable to update or revise the report to take into account any events or emergent circumstances or facts occurring or becoming apparent after the date of the report.
