Project Name	Perth Entertainment and Sporting Precinct Fauna Assessment		
Subject	Flora and fauna assessment memorandum		

## 1. Introduction

Main Roads Western Australia (Main Roads) is proposing construction at Burswood Park that will require the draining and infilling of three artificial lakes. The three lakes are proposed to be drained and reclaimed from approximately late 2025. GHD Pty Ltd (GHD) were engaged in March 2025 to undertake a desktop assessment and basic flora and fauna survey, focusing on native terrestrial and vertebrate aquatic species utilising the lakes within a defined Development Envelope (DE). GHD also assessed a fourth lake that flanks the DE that sits between the Swan River and west of the survey area, as a potential fauna relocation site for aquatic native vertebrates utilising the lakes of the survey area and provide Main Roads with advice on relocation and impacts to aquatic fauna.

### 1.1 Purpose of this report

This report documents the desktop and survey methods and results and provides advice on the potential impacts of filling in the three lakes and construction works on local aquatic fauna species. This report will support the environmental assessment and approvals process for the lake reclamation and construction required by Main Roads at Burswood Park.

### 1.2 Survey and study area

The survey area is located in Burswood Park and includes an area containing three artificial lakes and parkland east of Camfield drive and southeast of Roger MacKay Drive (Figure 1, Appendix A).

A study area was defined using a 5 km buffer around the survey area, for the purposes of the desktop assessment searches (Figure 2, Appendix A).

### 1.3 Scope of works

GHD was engaged to complete the following scope of works:

- Complete a desktop likelihood of occurrence assessments for both flora and fauna
- Conduct a reconnaissance flora assessment of the survey area
- Conduct a basic fauna assessment of the survey area and three lakes
- Assess the potential impacts of infilling the three lakes and direct impact of construction works on local native aquatic fauna species

- Draft a memorandum (this report) to concisely document the methods and results of the survey, and advise on potential aquatic fauna impacts associated with the proposed construction at Burswood Park.

## **1.4 Relevant legislation, conservation codes and background information**

In Western Australia (WA) significant communities, and flora and fauna are protected under both Federal and State Government legislation, including the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act), *Environmental Protection Act 1986* (EP Act), *Biodiversity Conservation Act 2016* (BC Act) and the *Biosecurity and Agriculture Management Act 2007* (BAM Act).

In addition, regulatory bodies also provide a range of guidance and information on expected standards and protocols for environmental surveys. An overview of key legislation and guidelines, conservation codes and background information relevant to this Project are provided in Appendix B.

## **1.5 Report limitations and assumptions**

This report has been prepared by GHD for Main Roads and may only be used and relied on by Main Roads for the purpose agreed between GHD and Main Roads as set out in section 1.3 of this report.

GHD otherwise disclaims responsibility to any person other than Main Roads arising in connection with this report. GHD also excludes implied warranties and conditions, to the extent legally permissible.

The services undertaken by GHD in connection with preparing this report were limited to those specifically detailed in the report and are subject to the scope limitations set out in the report.

The opinions, conclusions and any recommendations in this report are based on conditions encountered and information reviewed at the date of preparation of the report. GHD has no responsibility or obligation to update this report to account for events or changes occurring subsequent to the date that the report was prepared.

The opinions, conclusions and any recommendations in this report are based on assumptions made by GHD described in this report. GHD disclaims liability arising from any of the assumptions being incorrect.

## **2. Methodology**

### **2.1 Desktop assessment**

A desktop assessment was conducted of the study area and included a review of the:

- Department of Climate Change, Energy, the Environment and Water (DCCEEW) Protected Matters Search Tool (PMST) to identify Matters of National Environmental Significance (MNES) listed under the EPBC Act (DCCEEW, 2025) (Appendix C)
- Department of Biodiversity Conservation and Attractions (DBCA) Dandjoo Biodiversity Data Repository (DBCA, 2025) (Appendix C).

A pre-survey assessment of the likelihood of significant species occurring in the survey area was undertaken prior to the field survey based on desktop literature, aerial and street view imagery and field personnel's knowledge of the area. This desktop assessment was reviewed post-survey, with consideration given to field survey observations, species' biology and habitat requirements, and presence and quality of suitable habitat as determined during the field survey.

### **2.2 Field survey**

#### **2.2.1 Survey timing and personnel**

GHD Senior Zoologist/Ecologists completed the basic fauna and reconnaissance flora survey on 2 April 2025. The survey effort is presented in Figure 3.

#### **2.2.2 Reconnaissance flora**

The methods adopted for the flora and vegetation survey were formulated in accordance with the following regulatory guidance:

- Technical Guidance - Flora and Vegetation Surveys for Environmental Impact Assessment (EPA 2016).

A reconnaissance survey is undertaken to provide context and gather broad information about a survey area. Generally, a reconnaissance survey is required where flora and vegetation values are well defined, the area is not likely to support significant flora or vegetation and the scale and nature of potential impacts are not likely to be significant.

The survey method involved low intensity sampling of flora, identifying plants present at a high taxonomic level, due to the highly modified landscape (planted vegetation in an urban park environment). Photographs were taken of the vegetation to be used in this report.

#### **2.2.3 Basic fauna**

The methods adopted for the fauna survey were undertaken in accordance with the following regulatory guidance:

- Technical Guidance - Terrestrial vertebrate fauna surveys for environmental impact assessment (EPA 2020).

A basic survey is a low-intensity survey, conducted at the local scale to gather broad fauna and habitat information. The basic survey included a habitat assessment, photography and mapping.

Three lakes to be infilled and a relocation lake (RL) were visually assessed during the survey for signs of use by vertebrate fauna species. These lakes are numbered 1-3 and RL. The lakes were surveyed by walking the perimeter and recording fauna present using the lakes. A minimum of one hour was spent at each lake.

The Senior Zoologist/Ecologists used binoculars to assist in identifying fauna species. The remainder of the survey area was also traversed on foot to assess habitat and identify any species using the habitat surrounding the lakes. Photographs were taken of habitat and the lakes for use in this report.

## 2.2.4 Spatial data

Data (tracklogs and points) were recorded in the field using hand-held Garmin GPS. Certain atmospheric factors and other sources of error can affect the accuracy of GPS receivers. The Garmin ® GPS units used for this survey are accurate to within ±5 m on average. The coordinates are recorded in GDA94. The spatial data has been represented in figures in this report and can be supplied upon request.

### 3. Desktop assessment

#### 3.1 Flora

Desktop searches of the Dandjoo database (DBCA, 2025) identified 1,465 flora species from 149 families as previously recorded within the study area. No significant flora species were identified in the search.

The EPBC PMST (DCCEEW, 2025) identified 18 significant flora species as potentially occurring within the study area. These flora and their likelihood of occurrence have been assessed in Table 1 below.

All significant flora are either unlikely or highly unlikely to occur, as the habitats and vegetation in the survey area have been highly modified through clearing for parkland and replaced with planted vegetation.

Surrounding areas are also highly modified. Likelihood of occurrence has been supported with Florabase (Western Australian Herbarium (1998–) for plant descriptions, and available herbarium records.

*Table 1 Significant flora identified in the desktop searches*

Taxon	BC Act/ DBCA	EPBC Act	Description	Likelihood of Occurrence
<i>Andersonia gracilis</i>	-	EN	Slender erect or open straggly shrub, 0.1-0.5(-1) m high. Fl. white-pink-purple, Sep to Nov. White/grey sand, sandy clay, gravelly loam. Winter-wet areas, near swamps.	Highly unlikely – records within Perth are around Canning.
<i>Anigozanthos virid</i> subsp. <i>terraspectans</i>	-	VU	Rhizomatous, perennial, herb, 0.05-0.2 m high. Fl. green/yellow-green, Aug to Sep. Grey sand, clay loam. Winter-wet depressions.	Highly unlikely – no records according to Florabase in the Perth LGA.
<i>Banksia mimica</i>	-	EN	Prostrate, lignotuberous shrub, 0.15-0.4 m high. Fl. yellow-brown, Dec or Jan to Feb. White or grey sand over laterite, sandy loam.	Highly unlikely – records within Perth are around Gosnells.
<i>Caladenia huegelii</i>	-	EN	Tuberous, perennial, herb, 0.25-0.6 m high. Fl. green & cream & red, Sep to Oct. Grey or brown sand, clay loam.	Unlikely – records are around the Swan River.
<i>Calytrix breviseta</i> subsp. <i>breviseta</i>	-	EN	Shrub, 0.4-1 m high. Fl. purple-blue, Oct to Nov. Sandy clay. Swampy flats.	Highly unlikely - records within Perth are around Gosnells.
<i>Conospermum undulatum</i>	-	VU	Erect, compact shrub, 0.6-2 m high. Fl. white-other, May to Oct. Grey or yellow-orange clay sand.	Highly unlikely – no suitable habitat for this species and all records are out east of the Perth Airport and Gosnells.
<i>Diuris drummondii</i>	-	VU	Tuberous, perennial, herb, 0.5-1.05 m high. Fl. yellow, Nov to Dec or Jan. Low-lying depressions, swamps.	Highly unlikely – records are around Canning and upper Swan River.
<i>Diuris micrantha</i>	-	VU	Tuberous, perennial, herb, 0.3-0.6 m high. Fl. yellow & brown, Sep to Oct. Brown loamy clay. Winter-wet swamps, in shallow water.	Highly unlikely – no records in the Perth local government area (LGA).
<i>Diuris purdiei</i>	-	EN	Tuberous, perennial, herb, 0.15-0.35 m high. Fl. yellow, Sep to Oct. Grey-black sand, moist. Winter-wet swamps.	Highly unlikely – records are around Canning.
<i>Drakaea elastica</i>	-	EN	Tuberous, perennial, herb, 0.12-0.3 m high. Fl. red & green & yellow, Oct to Nov. White or grey sand. Low-lying situations adjoining winter-wet swamps.	Highly unlikely – no records in the Perth LGA.
<i>Drakaea micrantha</i>	-	VU	Tuberous, perennial, herb, 0.15-0.3 m high. Fl. red & yellow, Sep to Oct. White-grey sand.	Highly unlikely – records are around Canning.

Taxon	BC Act/ DBCA	EPBC Act	Description	Likelihood of Occurrence
<i>Eleocharis keigheryi</i>	VU	VU	Rhizomatous, clumped perennial, grass-like or herb (sedge), to 0.4 m high. Fl. green, Aug to Nov. Clay, sandy loam. Emergent in freshwater: creeks, claypans.	Highly unlikely – records are within Gosnells.
<i>Eremophila glabra</i> subsp. <i>chlorella</i>	-	EN	Prostrate & spreading or sprawling shrub, 0.2-1 m high. Fl. green-yellow, Jul to Nov. Sandy clay. Winter-wet depressions.	Highly unlikely – records are within Gosnells.
<i>Eucalyptus x balanites</i>	-	EN	Mallee, to 5 m high, bark rough, flaky. Fl. white, Oct to Dec or Jan to Feb. Sandy soils with lateritic gravel.	Highly unlikely – no records within Perth LGA.
<i>Grevillea curviloba</i>	-	EN	Prostrate to erect shrub, 0.1-2.5 m high. Fl. white-cream, Aug to Sep. Sand, sandy loam. Winter-wet heath. Amongst low trees, or tall (sclerophyll) shrubland; in sand, or clay; occupying winter wet flats.	Unlikely – known from a cultivation in Kings Park.
<i>Macarthuria keigheryi</i>	-	EN	Erect or spreading perennial, herb or shrub, 0.2-0.4 m high, 0.3-0.6 m wide. Fl. Sep to Dec or Feb to Mar. White or grey sand.	Highly unlikely - Records all around Canning and Gosnells.
<i>Synaphea</i> sp. Fairbridge Farm (D. Papenfus 696)	-	CR	Dense, clumped shrub, to 0.3 m high, to 0.4 m wide. Fl. yellow, Oct. Sandy with lateritic pebbles. Near winter-wet flats, in low woodland with weedy grasses.	Highly unlikely - Records all around Canning and Gosnells.
<i>Thelymitra stellata</i>	-	EN	Tuberous, perennial, herb, 0.15-0.25 m high. Fl. yellow & brown, Oct to Nov. Sand, gravel, lateritic loam.	Highly unlikely - Records around Gosnells and Armadale.

## 3.2 Fauna

Desktop searches of the Dandjoo database (DBCA, 2025) identified the presence/potential presence of 276 vertebrate fauna species as previously recorded in the study area. The Dandjoo database did not identify any significant fauna.

Dandjoo results identified semi-recent records of Oblong turtle (*Chelodina oblonga*), a fauna species of interest for this survey, from 2014 and 2015 at the lake in Eric Singleton Bird Sanctuary, and a record from Tomato Lake in Kewdale from 2018. There are also other records in the Perth area and Swan River (Figure 2, Appendix A).

The EPBC Act PMST (DCCEEW, 2025) identified 65 significant fauna species as potentially occurring within the study area, including 57 birds, 4 mammals, and 4 reptiles. Of these species, 9 birds are considered Likely to occur including the Fork-tailed Swift (MI), Cattle Egret (MI), Sharp-tailed Sandpiper (VU), Pectoral Sandpiper (MI), White-bellied Sea-Eagle (MI), Pied Stilt (MI), Rainbow Bee-eater (MA), Osprey (MI), and Red-necked Avocet (MI).

One bird species is Known to occur after being recorded during the survey, the Australian Fairy Tern (VU). An additional species, Great Egret (MA) was also recorded from the field survey, which was not identified in the desktop searches, and has been added to Table 2.

The remaining fauna species are all unlikely and highly unlikely to occur in the survey area. The likelihood of occurrence assessment is provided in Table 2 below.

Table 2      *Significant fauna identified in the desktop search*

Species	Common name	BC Act/ DBCA	EPBC Act	Likelihood of occurrence
<i>Ardea alba</i>	Great Egret	-	MA	<b>Known</b> to occur in the local and wider swan region and was recorded during the survey in the RL.

Species	Common name	BC Act/ DBCA	EPBC Act	Likelihood of occurrence
<i>Actitis hypoleucus</i>	Common Sandpiper	MI	MI	<b>Unlikely</b> to occur within the lakes, prefers coastal habitat in this region.
<i>Anous stolidus</i>	Common Noddy	MI	MI	<b>Highly unlikely</b> – is a pelagic species and wouldn't utilise the lake habitat.
<i>Apus pacificus</i>	Fork-tailed Swift	MI	MI	<b>Likely</b> to occur sporadically over the Swan River area, not likely to utilise the lakes in the survey area.
<i>Arenaria interpres</i>	Ruddy Turnstone	MI	VU	<b>Unlikely</b> to occur within the lakes, prefers coastal habitat in this region.
<i>Botaurus poiciloptilus</i>	Australasian Bittern	EN	EN	<b>Unlikely</b> to be utilising the lakes, as they are very open, and this species prefers dense reedbeds.
<i>Bubulcus ibis</i>	Cattle Egret	-	MI	<b>Likely</b> to occur in the area, may utilise the lakes for opportunistic foraging in the region.
<i>Calidris acuminata</i>	Sharp-tailed Sandpiper	MI	VU	<b>Likely</b> to occur in the area, may utilise the lakes for opportunistic foraging in the region.
<i>Calidris alba</i>	Sanderling	MI	MI	<b>Unlikely</b> to occur within the lakes, prefers coastal habitat in this region.
<i>Calidris canutus</i>	Red Knot, Knot	EN	VU	<b>Unlikely</b> to occur within the lakes, prefers coastal habitat in this region.
<i>Calidris ferruginea</i>	Curlew Sandpiper	CR	CR	<b>Unlikely</b> to occur within the lakes, prefers coastal habitat in this region.
<i>Calidris melanotos</i>	Pectoral Sandpiper	MI	MI	<b>Likely</b> to occur in the area, may utilise the lakes for opportunistic foraging in the region.
<i>Calidris ruficollis</i>	Red-necked Stint	MI	MI	<b>Unlikely</b> to occur within the lakes, prefers coastal habitat in this region.
<i>Calidris tenuirostris</i>	Great Knot	CR	VU	<b>Unlikely</b> to occur within the lakes, prefers coastal habitat in this region.
<i>Calyptorhynchus banksii naso</i>	Forest Red-tailed Black Cockatoo	VU	VU	<b>Unlikely</b> to be utilising the survey area, there is limited suitable habitat trees available, may fly over the area on occasion, accessing suitable remnant vegetation.
<i>Charadrius bicinctus</i>	Double-banded Plover	MI	MI	<b>Unlikely</b> to occur within the lakes, prefers coastal habitat in this region.
<i>Charadrius leschenaultii</i>	Greater Sand Plover	VU	VU	<b>Unlikely</b> to occur within the lakes, prefers coastal habitat in this region.
<i>Charadrius mongolus</i>	Lesser Sand Plover	EN	EN	<b>Unlikely</b> to occur within the lakes, prefers coastal habitat in this region.
<i>Charadrius ruficapillus</i>	Red-capped Plover	-	MA	<b>Unlikely</b> to occur within the lakes, prefers coastal habitat in this region.
<i>Diomedea amsterdamensis</i>	Amsterdam Albatross	CR	EN	<b>Highly unlikely</b> – is a pelagic species and wouldn't utilise the lake habitat.
<i>Diomedea epomophora</i>	Southern Royal Albatross	VU	VU	<b>Highly unlikely</b> – is a pelagic species and wouldn't utilise the lake habitat.
<i>Diomedea exulans</i>	Wandering Albatross	VU	VU	<b>Highly unlikely</b> – is a pelagic species and wouldn't utilise the lake habitat.
<i>Diomedea sanfordi</i>	Northern Royal Albatross	EN	EN	<b>Highly unlikely</b> – is a pelagic species and wouldn't utilise the lake habitat.
<i>Gallinago megala</i>	Swinhoe's Snipe	MI	MI	<b>Highly unlikely</b> – no recent records of this species in the region and has specific wetland habitat preferences.
<i>Gallinago stenura</i>	Pin-tailed Snipe	MI	MI	<b>Highly unlikely</b> – no recent records of this species in the region and has specific wetland habitat preferences.
<i>Haliaeetus leucogaster</i>	White-bellied Sea-Eagle	-	MI	<b>Likely</b> to be in the area and foraging and might utilise lakes.

Species	Common name	BC Act/ DBCA	EPBC Act	Likelihood of occurrence
<i>Himantopus himantopus</i>	Black-winged Stilt	-	MI	<b>Likely</b> to utilise the lakes of the survey area.
<i>Leipoa ocellata</i>	Malleefowl	VU	VU	<b>Highly Unlikely</b> – no longer occurs in the region.
<i>Limosa limosa</i>	Black-tailed Godwit	MI	EN	<b>Unlikely</b> – prefers coastal habitat.
<i>Macronectes giganteus</i>	Southern Giant-Petrel	MI	EN	<b>Highly unlikely</b> – is a pelagic species and wouldn't utilise the lake habitat.
<i>Macronectes halli</i>	Northern Giant Petrel	MI	VU	<b>Highly unlikely</b> – is a pelagic species and wouldn't utilise the lake habitat.
<i>Merops ornatus</i>	Rainbow Bee-eater	-	MA	<b>Likely</b> to occur, often occur in a variety of urban environments, especially near-coastal habitat.
<i>Motacilla cinerea</i>	Grey Wagtail	MI	MI	<b>Highly unlikely</b> – very few records in the Perth region.
<i>Numenius madagascariensis</i>	Eastern Curlew	CR	CR	<b>Unlikely</b> – prefers coastal habitat and tidal estuaries.
<i>Numenius minutus</i>	Little Curlew	MI	MI	<b>Unlikely</b> – very few records in the Perth region, probably an uncommon visitor.
<i>Numenius phaeopus</i>	Whimbrel	MI	MI	<b>Unlikely</b> – very few records in the Perth region, probably an uncommon visitor.
<i>Pachyptila turtur</i>	Fairy Prion	-	MI	<b>Highly unlikely</b> – is a pelagic species and wouldn't utilise the lake habitat.
<i>Pachyptila turtur subantarctica</i>	Fairy Prion (southern)	-	VU	<b>Highly unlikely</b> – is a pelagic species and wouldn't utilise the lake habitat.
<i>Pandion haliaetus</i>	Osprey	MI	MI	<b>Likely</b> to be seen in area, foraging around Swan River.
<i>Phaethon rubricauda westralis</i>	Red-tailed Tropicbird (Indian Ocean)	-	EN	<b>Highly unlikely</b> – is a pelagic species and wouldn't utilise the lake habitat.
<i>Phalaropus lobatus</i>	Red-necked Phalarope	MI	MI	<b>Unlikely</b> – prefers coastal habitat and offshore islands.
<i>Pluvialis fulva</i>	Pacific Golden Plover	MI	MI	<b>Unlikely</b> – prefers coastal habitat and tidal estuaries.
<i>Pluvialis squatarola</i>	Grey Plover	MI	VU	<b>Unlikely</b> – prefers coastal habitat
<i>Recurvirostra novaehollandiae</i>	Red-necked Avocet	MI	MI	<b>Likely</b> to be seen in area utilising Swan River, may use RL.
<i>Rostratula australis</i>	Australian Painted Snipe	EN	EN	<b>Unlikely</b> – not commonly seen in Perth region and requires dense wetland vegetation for shelter.
<i>Sternula nereis nereis</i>	Australian Fairy Tern	VU	VU	<b>Known</b> – recorded flying overhead at the RL towards inland habitats.
<i>Thalassarche cauta</i>	Shy Albatross	VU	EN	<b>Highly unlikely</b> – is a pelagic species and wouldn't utilise the lake habitat.
<i>Thalassarche impavida</i>	Campbell Albatross	VU	VU	<b>Highly unlikely</b> – is a pelagic species and wouldn't utilise the lake habitat.
<i>Thalassarche melanophris</i>	Black-browed Albatross	EN	VU	<b>Highly unlikely</b> – is a pelagic species and wouldn't utilise the lake habitat.
<i>Thalassarche steadi</i>	White-capped Albatross	VU	VU	<b>Highly unlikely</b> – is a pelagic species and wouldn't utilise the lake habitat.
<i>Thinornis cucullatus</i>	Hooded Plover	P4	MI	<b>Unlikely</b> – prefers coastal habitat and salt lakes.
<i>Tringa brevipes</i>	Grey-tailed Tattler	P4	MI	<b>Unlikely</b> – prefers coastal habitat and mudflats.

## 4. Results

Three lakes and a relocation lake were identified and surveyed, with all lakes containing water during the survey. These lakes are presented on Figure 4, Appendix A.

A visual assessment of these lakes identified that the salinity and general water quality appeared to be the same or similar for all lakes.

### 4.1 Flora and vegetation

The survey area has previously been completely cleared of native vegetation and currently comprises of landscaped parklands and manicured gardens around a series of small man-made lakes adjacent to the banks of the Swan River.

The area described as parklands comprises of isolated planted trees (mixture of locally native and exotic species) over manicured grassed areas (lawn). Tree species include (but not limited to) *Agonis flexuosa* (Peppermint), *Eucalyptus gomphocephala* (Tuart), *Casuarina obesa* (Swamp sheoak), \**Hibiscus titiaceus rubra* (Cottonwood hibiscus), \**Washingtonia filifera* (Cotton Palm) and \**Ficus macrophylla* (Moreton Bay Fig).

No Threatened Ecological Communities listed under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act) or Biodiversity Conservation Act 2016 (BC Act) or Priority Ecological Communities listed by the DBCA were identified within the survey area.

The manicured gardens comprise of a mixture of native flora and introduced (exotic) species in mulched garden beds. A narrow strip of sedges surround the lakes which are likely to have been planted with some natural recruitment. A representative photograph and description of each vegetation type is provided in Table 3.

No Threatened flora listed under the EPBC Act or BC Act or Priority flora listed by the DBCA was recorded during the survey. Furthermore, no significant flora identified in the desktop assessment are considered likely to occur due to the lack of remnant native vegetation and modified nature of the survey area.

Dominant flora included <i>*Juncus acutus</i> , <i>Juncus pallidus</i> , <i>Machaerina acuta</i> , <i>Lomandra</i> sp., <i>Cyperus</i> sp., <i>*Diates bicolor</i> , <i>?Leptocarpus</i> sp., <i>*Cynodon dactylon</i> , <i>*Cenchrus clandestinus</i> and occasional <i>Typha</i> sp.	

## 4.2 Fauna

A total of 31 fauna species were recorded during the survey, including 29 birds, one species of invasive fish (*Gambusia*) and one species of reptile (Oblong Turtle) (See fauna species list in Appendix E).

*Gambusia* were recorded utilising all lakes, including the relocation lake. They were occurring in large numbers. All *Gambusia* present in Australia are thought to be eastern *Gambusia* (i.e., *Gambusia holbrookii*) (Rowe et al. 2008). *Gambusia* were introduced to Western Australia in 1934, and it is known that their distribution is continuing to spread. They are a warm-water fish and likely to occur in coastal drainages rather than inland and higher altitude waters. Invasive impacts to water bodies and native aquatic fauna include reducing water quality in shallow lakes, competition for food and spatial exclusion through aggression by *Gambusia* on native fish, and predation on native fish young, particularly the Western Pygmy Perch (*Nannoperca vittata*). The Western Pygmy Perch has been identified in all lakes of the survey area, according to DWER Healthy Rivers South-West public data source (DWER 2025).

Impacts to frogs by *Gambusia* in restricting populations to ephemeral environments and reducing tadpole physical condition and survival as a result. *Gambusia* is associated with the decline of at least 15 species of Australian frog. Perth groups that have been studied include 3 species of *Crinia*, *Litoria adelaidensis* and *Heleioporus eyrie* (Rowe et al. 2008).

Several waterbirds were recorded using the lakes, including diving birds (Cormorant, Grebe, Darter), Wetland birds (Egret, Ibis), Rails (Buff-banded Rail, Coot, Moorhen and Swamphen) and ducks/swan. Several other bird species were recorded opportunistically using the parkland vegetation.

Two species were recorded with a conservation status, including the Great Egret (MA) and Fairy Tern (VU). A single Great Egret (*Ardea alba*) was recorded at the relocation lake, and a single Fairy Tern (*Sternula nereis*) was recorded flying northeast, over the survey area.

The Oblong Turtle was recorded through eggshell fragments (Plate 1) identified near the relocation lake (Figure 4, Appendix A). No actual turtles were sighted, possibly due to the turbidity of the lakes during the survey. The eggs were likely predated, as the egg fragments were broken.

**Plate 1**      *Oblong turtle nest with broken egg shell fragments (hand for scale).*

Each of the lakes varied in size but all contain very similar habitat. Each of the lakes are lined by sedges and some mature Eucalyptus spp. Table 4 below shows the habitat of the three lakes and relocation lake.

**Table 4**      *Lakes as fauna habitat*

<b>Lake</b>	<b>Description</b>	<b>Representative photograph</b>
1	Small, open lake with surrounding sedges and a small area containing some additional shelter with Eucalyptus sp.	
2	The largest of the three lakes. Contains a fountain and similarly the edges of the lake are planted with sedges. There is some additional shelter provided by Swamp Sheoak which is suitable for roosting for some waterbirds.	

Lake	Description	Representative photograph
3	<p>Lake with planted sedges, but also *<i>Cortaderia selloana</i> (Pampas grass) has encroached in some areas. This lake also has a sheltered area with Swamp Sheoak which is suitable for roosting for some waterbirds like ducks.</p>	
Relocation Lake (RL)	<p>The RL is a very large open lake surrounded by sedges, lining the edge of the lake. There are some more sheltered areas of the lake shore, where there is swamp Melaleuca trees and Swamp Sheoak, and some Eucalyptus spp. It is more open than the other three lakes, which might dissuade shyer waterbirds that require denser sedgeland for roosting/nesting. This is not expected to have an impact on waterbirds, as the three smaller lakes are also open and small-scale.</p>	

## **5. Assessment of potential impacts to infilling lakes**

The three lakes to be infilled are constructed man-made habitats, within a highly modified local environment. The lakes and adjoining habitat are not considered critical habitat for significant species, although a limited number of bird taxa are likely to inhabit and opportunistically utilise the lakes and surrounding constructed habitat. The retention of the RL in the immediate local area, which is significantly larger than the three lakes to be infilled (Figure 1), presence of the Swan River, and numerous wetlands (lakes) present throughout the study area (Figure 2) will mitigate the loss of habitat.

To minimise adverse impacts to native aquatic fauna species when infilling the three lakes, the following relocation recommendations are given:

- Where possible avoid breeding season of fauna (spring) when planning to drain and infill the lakes, the main concerns in this area will be breeding waterbirds.
- Drain lakes gradually and one at a time to allow for adequate time to relocate fauna
- Experienced Zoologists to be present during the draining of lakes to capture and relocate fauna safely to the RL area
- Install fauna proof barriers between road and RL and parkland to inhibit fauna movement over the road, and towards construction areas (reclaimed lakes)
- It is likely a number of feral fish species will be present and require disposal during the draining process
- Fauna permits will be required by DBCA, however ethics approval will not be due to it being a relocation activity.

## **Federal Environment Protection and Biodiversity Conservation Act 1999**

The *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) is the Federal Government's central piece of environmental legislation. It provides a legal framework to protect and manage nationally and internationally important flora, fauna, ecological communities and heritage places, which are defined in the EPBC Act as Matters of National Environmental Significance (MNES).

The biological aspects listed as MNES include:

Nationally threatened flora and fauna species and ecological communities

Migratory species

A person must not undertake an action that has, will have, or is likely to have a significant impact (direct or indirect) on MNES, without approval from the Federal Minister for the Environment.

The EPBC Act is administered by the Department of Climate Change, Energy, the Environment and Water (DCCEEW).

## **State Environmental Protection Act 1986**

The *Environmental Protection Act 1986* (EP Act) is the primary legislative Act dealing with the protection of the environment in Western Australia. The Act allows the Environmental Protection Authority (EPA), to prevent, control and abate pollution and environmental harm, for the conservation, preservation, protection, enhancement and management of the environment and for matters incidental to or connected with the foregoing. Part IV of the EP Act is administered by the EPA and makes provisions for the EPA to undertake environmental impact assessment of significant proposals, strategic proposals and land use planning schemes.

The Department of Water and Environment Regulation (DWER) is responsible for administering the clearing provisions of the EP Act (Part V). Clearing of native vegetation in Western Australia requires a permit from the DWER, unless exemptions apply. Applications for clearing permits are assessed by the Department and decisions are made to grant or refuse the application in accordance with the Act. When making a decision the assessment considers clearing against the ten clearing principles as specified in Schedule 5 of the EP Act:

1. Native vegetation should not be cleared if it comprises a high level of biodiversity.
2. Native vegetation should not be cleared if it comprises the whole or a part of, or is necessary for the maintenance of a significance habitat for fauna indigenous to Western Australia.
3. Native vegetation should not be cleared if it includes, or is necessary, for the continued existence of rare flora.
4. Native vegetation should not be cleared if it comprises the whole or part of native vegetation in an area that has been extensively cleared.
5. Native vegetation should not be cleared if it is significant as a remnant of native vegetation in an area that has been extensively cleared.
6. Native vegetation should not be cleared if it is growing in, or in association with, an environment associated with a watercourse or wetland.
7. Native vegetation should not be cleared if the clearing of the vegetation is likely to have an impact on the environmental values of any adjacent or nearby conservation area.
8. Native vegetation should not be cleared if the clearing of the vegetation is likely to cause appreciable land degradation.

9. Native vegetation should not be cleared if the clearing of the vegetation is likely to cause deterioration in the quality of surface or underground water.
10. Native vegetation should not be cleared if clearing the vegetation is likely to cause, or exacerbate, the incidence of flooding.

Exemptions for clearing include clearing that is a requirement of a written law or authorised under certain statutory processes (listed in Schedule 6 of the EP Act) and exemptions for prescribed low impact day-to-day activities (prescribed in the Environmental Protection (Clearing of Native Vegetation) Regulations 2004); these exemptions do not apply in environmentally sensitive areas (ESAs).

## **State *Biodiversity and Conservation Act 2016***

The *Biodiversity Conservation Act 2016* (BC Act) provides for the conservation and protection of biodiversity and biodiversity components, as well as the promotion of the ecologically sustainable use of biodiversity components in Western Australia. The BC Act replaces both the repealed *Wildlife Conservation Act 1950* (WC Act) and the *Sandalwood Act 1929* (Sandalwood Act), as well as their associated regulations. To attain the objectives of the BC Act, principles of ecological sustainable development have been established:

- Decision-making processes should effectively integrate both long-term and short-term economic, environmental, social and equitable considerations
- If there are threats of serious or irreversible environmental damage, lack of full scientific certainty should not be used as a reason for postponing measures to prevent environmental degradation
- The present generation should ensure that the health, diversity and productivity of the environment is maintained or enhanced for the benefit of future generations
- The conservation of biodiversity and ecological integrity should be a fundamental consideration in decision-making
- Improved valuation, pricing and incentive mechanisms should be promoted.

The BC Act is administered by the Department of Biodiversity Conservation and Attractions (DBCA).

# Background information

## Environmentally Sensitive Areas

Environmentally Sensitive Areas (ESAs) are declared by the Minister for Environment under Section 51B of the EP Act. The Table below outlines the aspects of areas declared as ESA in the Environmental Protection (Environmentally Sensitive Areas) Notice 2005.

### Aspects of ESAs

Aspects of Environmentally Sensitive Areas
A declared World Heritage property as defined in Section 13 of the EPBC Act.
An area that is included on the Register of the National Estate (RNE), because of its natural values, under the <i>Australian Heritage Commission Act 1975</i> of the Commonwealth (the RNE was closed in 2007 and is no longer a statutory list – all references to the RNE were removed from the EPBC Act on 19 February 2012).
A defined wetland and the area within 50 m of the wetland. Defined wetlands include Ramsar wetlands, conservation category wetlands and nationally important wetlands.
The area covered by vegetation within 50 m of rare flora, to the extent to which the vegetation is continuous with the vegetation in which the rare flora is located.
The area covered by a Threatened Ecological Community.
A Bush Forever Site listed in “Bush Forever” Volumes 1 and 2 (2000), published by the Western Australia Planning Commission, except to the extent to which the site is approved to be developed by the Western Australia Planning Commission.
The areas covered by the <i>Environmental Protection (Gnangara Mound Crown Land) Policy 1992</i> .
The areas covered by the <i>Environmental Protection (Western Swamp Tortoise Habitat) Policy 2002</i> .
The areas covered by the lakes to which the <i>Environmental Protection (Swan Coastal Plain Lakes) Policy 1992</i> (EPP Lakes) applies.
Protected wetlands as defined in the <i>Environmental Protection (South West Agricultural Zone Wetlands) Policy 1998</i> .

## Reserves and conservation areas

### Bush Forever

Bush Forever, which was released in December 2000 and proclaimed in 2010, is a Government initiative aimed to retain and protect regionally significant bushland on the Swan Coastal Plain within the Perth Metropolitan Region. Bush Forever aims to protect more than 51,000 hectares of regionally significant bushland within 287 sites across the metropolitan portion of the Swan Coastal Plain (Government of Western Australia (GoWA) 2000). Bush Forever sites constitute ESAs as declared by a notice under Section 51B of the EP Act.

### Department of Biodiversity, Conservation and Attractions managed land and waters

DBCA manages lands and waters throughout Western Australia to conserve ecosystems and species, and to provide for recreation and appreciation of the natural environment. DBCA managed lands and waters include national parks, conservation parks and reserves, marine parks and reserves, regional parks, nature reserves, State forest and timber reserves. Access to, or through, some areas of DBCA managed lands may require a permit or could be restricted due to management activities. Proposed land use changes and development proposals that abut DBCA managed lands will generally be referred to DBCA throughout the assessment process.

# **Wetlands**

Wetlands include not only lakes with open water, but areas of seasonally, intermittently or permanently waterlogged soil.

## **Ramsar Wetlands (Wetlands of International Importance)**

The Convention of Wetlands of International Importance was signed in 1971 at the Iranian town of Ramsar. The Convention has since been referred to as the Ramsar Convention. Ramsar Listed wetlands are “sites containing representative, rare or unique wetlands, or wetlands that are important for conserving biological diversity ... because of their ecological, botanical, zoological, limnological or hydrological importance” (DAWE 2020b). Once a Ramsar Listed Wetland is designated, the country agrees to manage its conservation and ensure its wise use. Under the Convention, wise use is broadly defined as “maintaining the ecological character of a wetland” (DAWE 2020b).

## **Nationally important wetlands**

Wetlands of national significance are listed under the Directory of Important Wetlands in Australia. Nationally important wetlands are wetlands which meet at least one of the following criteria (DAWE 2020a):

- It is a good example of a wetland type occurring within a biogeographic region in Australia
- It is a wetland which plays an important ecological or hydrological role in the natural functioning of a major wetland system/complex
- It is a wetland which is important as the habitat for animal taxa at a vulnerable stage in their life cycles, or provides a refuge when adverse conditions such as drought prevail
- The wetland supports one percent or more of the national populations of any native plant or animal taxa
- The wetland supports native plant or animal taxa or communities which are considered endangered or vulnerable at the national level
- The wetland is of outstanding historical or cultural significance.

## **Geomorphic wetlands**

Categorisation of wetlands has been conducted by Hill et al. (1996), delineating Swan Coastal Plain wetlands into levels of protection and management categories. Conservation Category Wetlands are wetlands that support high levels of attributes and functions. Resource Enhancement Wetlands are those that have been partly modified but still support substantial functions and attributes. Multiple Use Wetlands are classified as those wetlands with few attributes that still provide important wetland functions. Multiple Use wetlands have few important ecological attributes and functions remaining.

The Geomorphic Wetlands Swan Coastal Plain dataset displays the location, boundary, geomorphic classification (wetland type) and management category of wetlands on the Swan Coastal Plain.

# **Conservation codes**

Species of significant flora, fauna and communities are protected under both Federal and State Acts. The Federal EPBC Act provides a legal framework to protect and manage nationally important flora and communities. The State BC Act is the primary wildlife conservation legislation in Western Australia. Information on the conservation codes is summarised in the following sections.

# Flora and fauna

## Significant flora and fauna

Species of significant flora are protected under both Federal and State legislation. Any activities that are deemed to have a significant impact on species that are recognised by the EPBC Act, and/or the BC Act can warrant referral to DAWE and/or the EPA.

The Federal conservation level of flora and fauna species and their significance status is assessed under the EPBC Act. The significance levels for flora and fauna used in the EPBC Act align with the International Union for Conservation of Nature (IUCN) Red List criteria, which are internationally recognised as providing best practice for assigning the conservation status of species. The EPBC Act also protects land and migratory species that are listed under International Agreements. The list of migratory species established under section 209 of the EPBC Act comprises:

- Migratory species which are native to Australia and are included in the appendices to the Bonn Convention (Convention on the Conservation of Migratory Species of Wild Animals Appendices I and II)
- Migratory species included in annexes established under the Japan-Australia Migratory Bird Agreement (JAMBA) and the China–Australia Migratory Bird Agreement (CAMBA)
- Native, migratory species identified in a list established under, or an instrument made under, an international agreement approved by the Minister, such as the Republic of Korea–Australia Migratory Bird Agreement (ROKAMBA)

The State conservation level of flora and fauna species and their significance status also follows the IUCN Red List criteria. Under the BC Act flora and fauna can be listed as Threatened, Extinct and as Specially Protected species.

Threatened species are those species which have been adequately searched for and are deemed to be, in the wild, either rare, under identifiable threat of extinction, or otherwise in need of special protection, and have been gazetted as such. The assessment of the conservation status of Threatened species is based on their national extent and ranked according to their level of threat using IUCN Red List categories and criteria. Specially protected species meet one or more of the following categories: species of special conservation interest; migratory species; cetaceans; species subject to international agreement; or species otherwise in need of special protection. Species that are listed as Threatened or Extinct species under the BC Act cannot also be listed as Specially Protected species.

Possibly threatened species that do not meet survey criteria, or are otherwise data deficient, are added to the Priority Fauna or Priority Flora Lists under Priorities 1, 2 or 3. These three categories are ranked in order of priority for survey and evaluation of conservation status so that consideration can be given to their declaration as threatened flora or fauna.

Species that are adequately known, are rare but not threatened, or meet criteria for near threatened, or that have been recently removed from the threatened species or other specially protected fauna lists for other than taxonomic reasons, are placed in Priority 4. These species require regular monitoring.

Assessment of Priority codes is based on the Western Australian distribution of the species, unless the distribution in WA is part of a contiguous population extending into adjacent States, as defined by the known spread of locations.

For the purposes of this assessment, all species listed under the EPBC Act, BC Act and DBCA Priority species are considered significant.

*Categories and definitions for EPBC Act and BC Act listed flora and fauna species*

Conservation category	Definition
<b>Threatened species</b>	
Critically Endangered (CR)	<p>Threatened species considered to be “facing an extremely high risk of extinction in the wild in the immediate future, as determined in accordance with criteria set out in the ministerial guidelines”.</p> <p>Listed as critically endangered under section 19(1)(a) of the BC Act in accordance with the criteria set out in section 20 and the ministerial guidelines.</p>
Endangered (EN)	<p>Threatened species considered to be “facing a very high risk of extinction in the wild in the near future, as determined in accordance with criteria set out in the ministerial guidelines”.</p> <p>Listed as endangered under section 19(1)(b) of the BC Act in accordance with the criteria set out in section 21 and the ministerial guidelines.</p>
Vulnerable (VU)	<p>Threatened species considered to be “facing a high risk of extinction in the wild in the medium term future, as determined in accordance with criteria set out in the ministerial guidelines”.</p> <p>Listed as vulnerable under section 19(1)(c) of the BC Act in accordance with the criteria set out in section 22 and the ministerial guidelines.</p>
<b>Extinct species</b>	
Extinct (EX)	Species where “there is no reasonable doubt that the last member of the species has died”, and listing is otherwise in accordance with the ministerial guidelines (section 24 of the BC Act).
Extinct in the Wild (EW)	Species that “is known only to survive in cultivation, in captivity or as a naturalised population well outside its past range; and it has not been recorded in its known habitat or expected habitat, at appropriate seasons, anywhere in its past range, despite surveys over a time frame appropriate to its life cycle and form”, and listing is otherwise in accordance with the ministerial guidelines (section 25 of the BC Act).
<b>Specially protected species</b>	
Migratory (MI)	<p>Fauna that periodically or occasionally visit Australia or an external Territory or the exclusive economic zone; or the species is subject of an international agreement that relates to the protection of migratory species and that binds the Commonwealth; and listing is otherwise in accordance with the ministerial guidelines (section 15 of the BC Act).</p> <p>Includes birds that are subject to an agreement between the government of Australia and the governments of Japan (JAMBA), China (CAMBA) and The Republic of Korea (ROKAMBA), and fauna subject to the Convention on the Conservation of Migratory Species of Wild Animals (Bonn Convention), an environmental treaty under the United Nations Environment Program. Migratory species listed under the BC Act are a subset of the migratory animals, that are known to visit Western Australia, protected under the international agreements or treaties, excluding species that are listed as Threatened species.</p>
Species of Special conservation interest (conservation dependent fauna) (CD)	Fauna of special conservation need being species dependent on ongoing conservation intervention to prevent it becoming eligible for listing as threatened.
Other specially protected fauna (OS)	Fauna otherwise in need of special protection to ensure their conservation, and listing is otherwise in accordance with the ministerial guidelines (section 18 of the BC Act).

*Codes for DBCA listed Priority flora and fauna*

Priority category	Definition
Priority 1	<p>Poorly-known taxa</p> <p>Species that are known from one or a few locations (generally five or less) which are potentially at risk. All occurrences are either: very small; or on lands not managed for conservation, e.g. agricultural or pastoral lands, urban areas, road and rail reserves, gravel reserves and active mineral leases; or otherwise under threat of habitat destruction or degradation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under immediate threat from known threatening processes. Such species are in urgent need of further survey.</p>

<b>Priority category</b>	<b>Definition</b>
Priority 2	<p>Poorly-known taxa</p> <p>Species that are known from one or a few locations (generally five or less), some of which are on lands managed primarily for nature conservation, e.g. national parks, conservation parks, nature reserves and other lands with secure tenure being managed for conservation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under threat from known threatening processes. Such species are in urgent need of further survey.</p>
Priority 3	<p>Poorly-known taxa</p> <p>Species that are known from several locations, and the species does not appear to be under imminent threat, or from few but widespread locations with either large population size or significant remaining areas of apparently suitable habitat, much of it not under imminent threat. Species may be included if they are comparatively well known from several locations but do not meet adequacy of survey requirements and known threatening processes exist that could affect them. Such species are in need of further survey.</p>
Priority 4	<p>Rare, Near Threatened and other taxa in need of monitoring</p> <ul style="list-style-type: none"> <li>– Rare: Taxa that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection, but could be if present circumstances change. These taxa are usually represented on conservation lands.</li> <li>– Near Threatened. Taxa that are considered to have been adequately surveyed and that do not qualify for Conservation Dependent, but that are close to qualifying for Vulnerable.</li> <li>– Taxa that have been removed from the list of threatened taxa during the past five years for reasons other than taxonomy.</li> </ul>

## Other significant flora

Flora species, subspecies, varieties, hybrids and ecotypes may be significant for a range of reasons, other than a statutory listing. The EPA (2016a, b) states that significant flora may include taxa that have/are:

- A keystone role in a particular habitat for Threatened or Priority flora or fauna species, or large populations representing a considerable proportion of the local or regional total population of a species
- Relictual status, being representation of taxonomic or physiognomic groups that no longer occur widely in the broader landscape
- New species or anomalous features that indicate a potential new species
- Being representative of the range of a species (particularly, at the extremes of range, recently discovered range extensions, or isolated outliers of the main range)
- Unusual species, including restricted subspecies, varieties, or naturally occurring hybrids
- Local endemism (a restricted distribution) or association with a restricted habitat type (e.g. surface water or groundwater dependent ecosystems).

## Other significant fauna

Fauna species may be significant for a range of reasons other than those protected by international agreement or treaty, Specially Protected or Priority Fauna. Significant fauna may include short-range endemic species, species that have declining populations or declining distributions, species at the extremes of their range, or isolated outlying populations, or species which may be undescribed (EPA 2010).

## Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the [Administrative Guidelines on Significance](#).

## Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at <https://www.dcceew.gov.au/parks-heritage/heritage>

A [permit](#) may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

## 1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

## 2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data is available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance on the contents of this report.

## 3 DATA SOURCES

### Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

### Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions when time permits.

## 4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded breeding sites; and
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

# Conservation status definitions

## Threatened species

- CR – Critically Endangered
- EN – Endangered
- VU – Vulnerable
- EX – Extinct
- EW – Extinct in the Wild
- CD – Species of special conservation interest (conservation dependent)
- OS – Species otherwise in need of special protection (other specially protected)
- MI – Migratory
- SP – Specially protected species

## Priority species

- P1 – Priority 1: Poorly-known species – known from few locations, none on conservation lands
- P2 – Priority 2: Poorly-known species – known from few locations, some on conservation lands
- P3 – Priority 3: Poorly-known species – known from several locations
- P4 – Priority 4: Rare, Near Threatened and other species in need of monitoring

## Dandjoo specific codes

- Parent of conservation listed taxa
- Cons code inherited from parent, X
