## DETAILED FLORA AND VEGETATION SURVEY

Prepared for: Cherry Martin and C. Martin as Trustee for C. Martin  
Super Fund

Report Date: 15 January 2024

Version: 1

Report No. 2024-799

The logo for PGV Environmental is located at the bottom of the page. It features the letters 'PGV' in a large, bold, white sans-serif font. Below 'PGV', the word 'ENVIRONMENTAL' is written in a smaller, white, all-caps sans-serif font. The background of the logo area is a vibrant orange with a subtle, curved white line that sweeps across the top of the logo, mirroring the design element seen in the upper half of the page.

# 1 INTRODUCTION

---

## 1.1 Background

Lot 660 La Perouse Court, Goode Beach is located in the City of Albany, approximately 5km south-east of the Albany Central Business District (Figure 1). The site is proposed to be developed for tourism purposes as the Vancouver Beach Resort. The proposed resort is to be developed on the eastern part of the Lot on a footprint of approximately 2.3ha. The resort will be accessed via a 6m wide entry road to be constructed on an existing track. The facility will also have a separate 3.5m wide emergency access road. The balance of the lot (5.4ha) is proposed to remain undeveloped.

The lot is bound by La Perouse Court to the south-east, Goode Beach to the east and undeveloped land on the remaining boundaries. The lot straddles Naaranyirrup (Lake Vancouver) (Figure 2).

The resort site contains native vegetation, most of which will need to be cleared. The access road and emergency road are proposed to be constructed on existing tracks, however may need some clearing to construct the roads to the required standard. This Flora and Vegetation Survey was commissioned by the land owners to assess the potential impact of the proposed resort development.

## 1.2 Scope of Works

A Detailed Flora and Vegetation Survey was undertaken in accordance with the *EPA Technical Guidance: Flora and Vegetation Surveys* (EPA, 2016). The survey included the following:

- Desktop search and review of the Department of Biodiversity, Conservation and Attractions (DBCA) Threatened and Priority flora database;
- A search of Atlas of Living Australia for records of Threatened or Priority species;
- A search of the Commonwealth Government's Protected Matters Search Tool to identify species potentially occurring within the area that are protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act);
- Examination of historic and recent aerial photography and contour and soil maps to provisionally identify vegetation types and condition;
- Field survey using quadrats to record native and introduced species as well as a thorough site walkover of any areas of native vegetation;
- Targeted survey for orchids in accordance with Draft Survey Guidelines for Australia's Threatened Orchids Guidelines for Detecting Orchids Listed as 'Threatened' under the Environment Protection and Biodiversity Conservation Act 1999 Australia (Commonwealth of Australia, 2013);
- Analysis of quadrat data to ascertain the conservation significance of the vegetation;
- Recording of any significant plant species using a hand-held GPS;
- Description and mapping of vegetation types and vegetation condition; and
- Compilation of a flora list.

The survey area (the 'site') includes the resort footprint and 5m either side of the existing tracks proposed as the Access and Emergency Access Tracks (Figure 2).

## 2 EXISTING ENVIRONMENT

### 2.1 Land Use

The earliest aerial photograph from 1961 shows the Lot is vegetated with some disturbance evident in the south-west corner (Plate 1).

**Plate 1: Aerial Photograph from 1961 (Landgate, 2024)**

The 1977 aerial photograph shows some tracks on the site and the development of a possible blowout in the north-east corner (Plate 2).

**Plate 2: Aerial Photograph from 1977 (Landgate, 2024)**

The 2009 aerial photograph shows an additional track at the eastern end connecting to development to the south. The north-east blowout has been naturally stabilised (Plate 3).

**Plate 3: Aerial Photograph from 2009 (Landgate, 2024)**

## 2.2 Topography

The resort footprint is located on undulating coastal dunes ranging in elevation from 8-10m Australian Height Datum (AHD) on the tallest dune crests to 2-4m in the intervening swales. The proposed access road is flat at around 2m AHD (Figure 2).

## 2.3 Geomorphology and Soils

The site is mapped on Albany Sandplain Zone located on a gently undulating plain dissected by a number of short rivers flowing south. The zone is made up of eocene marine sediments overlying Proterozoic granitic and metamorphic rocks. Soils are sandy duplex soils, often alkaline and sodic, with some sands and gravels. (National Map, 2023).

Vancouver Peninsula consists of a series of granite hills linked by sand spits or bridges. The site is located on a linking bridge of Quindalup dune sands to a massive granite complex located immediately to the south of Lot 660. The bridges are the result of sand transport and deposition by wind and current action over the last 10 000 years. The site contains parabolic dunes of the Quindalup Dune System (Alan Tingay & Associates, 1992).

The soil phase mapped on the site is Meerup podzols over calcareous sand phase (242MmMRp) which are podzols over calcareous sand (DPIRD, 2024).

## 2.4 Hydrology

Groundwater is shallow, between 1 and 2m from the surface in the dune depressions, generally flowing east to Frenchman Bay (Alan Tingay & Associates, 1992). Naaranyirrup (Lake Vancouver) is an expression of groundwater. There are no wetlands in the footprint of the proposed resort.

## 3 METHODOLOGY

---

### 3.1 Previous Survey

A Flora and Vegetation Survey was undertaken in 1992 on what was previously Lot 440 la Perouse Court, which at that time was a larger lot containing Naaranyirrup (Lake Vancouver) and an area to the south that has subsequently been subdivided (Alan Tingay & Associates, 1992). The results of the survey were reviewed as part of this current survey including a review of contemporary nomenclature and listings under the *Biodiversity Conservation Act 2016* (BC Act), the *Environment Protection and Biodiversity Conservation Act 2000* (EPBC Act) and Priority Flora listings for Western Australia.

### 3.2 Database Searches

Searches of the following databases were undertaken prior to the site survey:

- DBCA Threatened and Priority Flora Databases including the WA Herbarium database (WAHerb) and Threatened (Declared Rare) and Priority Flora Species List (TFPL) (Appendix 1) (DBCA, 2023) for a radius of 10 km (Search Reference: 26-0923FL) that provides a list of Threatened and Priority species recorded in the area;
- Atlas of Living Australia (ALA, 2023) (Appendix 2) which shows all species that have been recorded within a 10km radius of the site.
- The EPBC Act Protected Matters Search Tool (DCCEEW, 2023) (Appendix 3) which identifies species that are listed under the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) that could potentially have habitat within a 5km radius of the site.
- DBCA Threatened and Priority Ecological Community Database (Appendix 4) for a radius of 20km that provides a list of Threatened and Priority ecological communities recorded in the area (Search Reference: 10-0923EC).

### 3.3 Detailed Survey

The Detailed Flora and Vegetation Survey was undertaken on 14 October 2023 by Dr Paul van der Moezel of PGV Environmental. The survey included sampling from eleven 10m x 10m permanent quadrats with aluminium pegs mostly in the north-west corner as well as a walk through the site. The tracklog for the survey is shown on Plate 4.

Information on flora composition and vegetation structure was recorded in the quadrats.

Plant species were either identified in the field or taken for identification at the Perth Reference Herbarium or office using standard reference guides.

#### Plate 4: Track Log

### 3.4 Survey Conditions

Rainfall for Albany (Measured at Albany, Site Number 09500) was above average in June being 295.6 mm compared to an average of 131.8 mm, below average for July in 2023 being 108.5 mm compared to a mean value of 142.5 mm. The season was also dry in August and September being 81.8 mm and 70.0 mm compared to 126.6 mm and 100.9 mm. October also had below average rainfall with 23.2 mm compared to an average of 78.0 mm (BOM, 2023). The below average rainfall after a wet June is not considered to be significant to impact on species present and is not a constraint to the survey. The conditions that the survey was undertaken in are presented in Table 1 in order to assess the adequacy of the survey.

**Table 1: Statement of Botanical Survey Conditions**

Issue	Constraints (Y/N)*	Comment
Competency/experience of the consultant conducting the survey	No	Dr Paul van der Moezel has undertaken several botanical surveys in the Albany area and is familiar with the flora of the survey area, having also conducted the 1992 survey.
Proportion of the flora identified^	No	The timing of the survey in October was optimal to identify most flora species on the site. No follow-up survey required.
Sources of information (historic/recent or new data)	No	The flora of the area is well documented.
Proportion of the task achieved and further work that may need to be undertaken	No	No follow-up survey required as no Threatened Flora expected to occur in other seasons.
Timing/weather/season/cycle	No	The spring survey was optimal for most flora species. 2023 was an average year for ephemeral species.
Disturbances (Fire)	No	The site has not been recently burnt.

Issue	Constraints (Y/N)*	Comment
Intensity of survey (e.g. In retrospect was the intensity adequate)	No	The time spent on site, approximately 11 hours. The site contains thick coastal dune vegetation that made full access difficult.
Completeness (e.g. was relevant area fully surveyed)	Moderate	
Resources (e.g. degree of expertise available for plant identification)	No	Experienced botanist undertook plant identifications on site and at the Perth Herbarium and office.
Remoteness and/or access problems	No	Easily accessible site close to Albany. A 50m section of the access road was inundated up to 0.5m deep, making access difficult in that part of the site.
Availability of contextual (e.g. bioregional) information for the study area.	No	Biodiversity Audit of WA Biogeographical Subregions assessment 2002.

\*Constraints have been rated as Significant, Moderate or No constraints

^Fungi and nonvascular flora (e.g. algae, mosses and liverworts) were not specifically surveyed for during the survey.

## 4 RESULTS

---

### 4.1 Desktop Studies

#### 4.1.1 Previous Survey

The 1992 survey of the parent Lot 440 La Perouse Court recorded 56 native species. At the time of the survey there were no species of conservation significance recorded. An analysis of the species recorded, including nomenclature changes and current Threatened and Priority species listings indicates that none of the species recorded in 1992 are listed in 2024 under the *Biodiversity Conservation Act 2016* (BC Act) or the *Environment Protection and Biodiversity Conservation Act 2000* (EPBC Act).

The resort footprint and emergency access road were mapped in 1992 as one vegetation type: *Agonis flexuosa/Adenanthos sericeus* Closed Scrub. The vegetation either side of the proposed access road was mapped as *Agonis flexuosa/Eucalyptus* spp Woodland over *Melaleuca thymoides* Low Heath on the western side of Lake Vancouver and *Agonis flexuosa* Closed Scrub and *Agonis flexuosa/Adenanthos sericeus* Closed Scrub north of the lake.

#### 4.1.2 Flora Database Searches

The results of the database searches and their likelihood to occur on the site is outlined in Table 2.

In summary, the site has habitat for for one Threatened species and five Priority species to potentially occur as follows:

- *Calectasia cyanea* (Blue Tinsel Lily), Critically Endangered;
- *Drosera paleacea* (Dwarf Sundew), Priority 1;
- *Austrostipa mundula* (Neat Spear Grass), Priority 3;
- *Adenanthos x cunninghamii*, Priority 4;
- *Corysanthes limpida* (Crystal Helmet Orchid), Priority 4; and
- *Thomasia quercifolia* (Oak Leaved Thomasia), Priority 4.

None of the species identified have been previously recorded on the site, although *Drosera paleacea* and *Adenanthos x cunninghamii* have been recorded nearby. All species were identifiable at the time of the survey.

Conservation codes are in Appendix 4

**Table 2: Identified Significant Flora Species and Likelihood of Occurring on the Site**

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
<i>Banksia brownii</i>	Brown's Banksia, Feather-leaved Banksia	Critically Endangered	Endangered	Brown's Banksia prefers sand over laterite, gravel, loam over granite in gullies.	Highly Unlikely – not suitable habitat
<i>Banksia verticillata</i>	Granite Banksia, Albany Banksia, River Banksia	Critically Endangered	Vulnerable	The Granite Banksia occurs on sandy loam, on or beside granite outcrops.	Highly Unlikely – not granite habitat
<i>Caladenia huegelii</i>	King Spider-orchid, Grand Spider-orchid, Rusty Spider-orchid	Critically Endangered	Endangered	The Grand Spider-orchid prefers deep grey-white sand usually associated with the Bassendean sand-dune system, however, rare plants have been known to extend into the Spearwood system (in which calcareous yellow sands dominate) in some areas (DEC, 2009). This species generally does not survive in disturbed areas.	No – outside the species range as this species occurs on the Swan Coastal Plain
<i>Calectasia cyanea</i>	Blue Tinsel Lily	Critically Endangered	Critically Endangered	The Blue Tinsel Lily prefers white, grey or yellow sand or gravel. This species is restricted to Torndirrup National Park and Albany region of the South West Botanical Province (Barrett and Dixon, 2001).	Possible – habitat may occur on the site
<i>Commersonia apella</i>	Many-flowered Commersonia	Critically Endangered	Critically Endangered	The Many-flowered Commersonia occurs in grey sand over laterite near a river bank (Westerns Australian Herbarium, 2003).	No – outside species range and record is of a specimen
<i>Commersonia erythrogyna</i>	Trigwell's Rulingia	Critically Endangered	Endangered	Trigwell's Rulingia occurs on lateritic ridges supporting open low jarrah ( <i>Eucalyptus marginata</i> ) and marri ( <i>Corymbia calophylla</i> ) woodland.	No – outside species range and record is of a specimen
<i>Isopogon uncinatus</i>	Hook-leaf Isopogon	Critically Endangered	Endangered	Hook-leaf Isopogon occurs in loam or sand on granite, peaty sand on swampy depressions, hillslopes.	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
<i>Thelymitra variegata</i>	Queen of Sheba	Critically Endangered		The Queen of Sheba orchid grows on sandy clay, sand and laterite. The orchid is found in banksia and Jarrah woodland (Brown et al., 2013)	Highly unlikely – not suitable habitat
<i>Caladenia granitora</i>	Granite Spider Orchid	Endangered		Granite Spider Orchid shallow soil crevices on granite in coastal areas.	Highly Unlikely – not granite habitat
<i>Caladenia winfieldii</i>	Majestic Spider-orchid	Endangered	Endangered	The Majestic Spider-orchid grows in grey-black sand, sandy loam in winter-wet depressions, swamps.	No – record in error – occurs in the Jarrah Forest Region
<i>Chorizema varium</i>	Limestone Pea, Bush Flame Pea	Endangered	Endangered	The Limestone Pea grows in sand on coastal limestone hills and outcrops.	No – record in error – occurs in the Central West Coast
<i>Drakaea micrantha</i>	Dwarf Hammer-orchid	Endangered	Vulnerable	Dwarf Hammer-orchid usually occurs on cleared fire breaks or open sandy patches in Banksia, Jarrah and Sheoak woodlands or forest and often found under Spearwood thickets.	Highly Unlikely – not suitable habitat
<i>Sphenotoma drummondii</i>	Mountain Paper-heath	Endangered	Endangered	Mountain Paper-heath grows in stony or shallow soils over granite or quartzite on steep rocky slopes, crevices of rocks.	Highly Unlikely – not suitable habitat
<i>Banksia goodii</i>	Good's Banksia	Vulnerable	Vulnerable	Good's Banksia grows in white or grey sand over laterite.	Highly Unlikely – not lateritic habitat
<i>Caladenia harringtoniae</i>	Harrington's Spider-orchid, Pink Spider-orchid	Vulnerable	Vulnerable	Harrington's Spider-orchid occurs in sandy loam on winter-wet flats, margins of lakes, creeklines, granite outcrops.	Highly Unlikely – not suitable habitat
<i>Chordifex abortivus</i>	Manypeaks Rush	Vulnerable	Endangered	The Manypeaks Rush grows in sand over gravelly clay in heath or scrub with a sedge understorey.	Highly Unlikely – not recorded within 10km and not suitable habitat
<i>Conostylis misera</i>	Grass Conostylis	Vulnerable	Endangered	Grass Conostylis prefers white or grey sand, sandy loam on winter-wet flats.	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
<i>Diuris drummondii</i>	Tall Donkey Orchid	Vulnerable	Vulnerable	The Tall Donkey Orchid grows in low-lying depressions in peaty and sandy clay swamps (DEC, 2008), in areas that contain surface water well into summer (Brown et al., 2013).	Highly Unlikely – not suitable habitat
<i>Kennedia glabrata</i>	Northcliffe Kennedia	Vulnerable	Vulnerable	Northcliffe Kennedia occurs in soil pockets, sandy soils on granite outcrops.	Highly Unlikely – not recorded within 10km and not suitable habitat
<i>Acacia prismifolia</i>	Diel's Wattle	Presumed Extinct	Extinct (Recently rediscovered)	Diel's Wattle occurs on rocky slopes and has been rediscovered near Cranbrook.	No – record is of a specimen and outside species range
<i>Caladenia evanescens</i>	Semaphor Spider Orchid	Priority 1		Semaphor Spider Orchid grows in sand on consolidated sand dunes.	Highly Unlikely – record is of a specimen and not typical habitat
<i>Drosera bicolor</i>		Priority 1		<i>Drosera bicolor</i> occurs in white silica sand on floodplains.	No – record in error and outside of species range in the Esperance Bioregion
<i>Drosera paleacea</i>	Dwarf Sundew	Priority 1		Dwarf Sundew occurs on black moist peat in swamps on coastal plain..	Possible – habitat may occur on the site
<i>Leucopogon ozothamnoides</i>		Priority 1		<i>Leucopogon ozothamnoides</i> occurs in gravelly soils, sandy clay loam.	No – record in error – outside of species range and not suitable habitat
<i>Prasophyllum paulinae</i>	Pauline's Laughing Leek Orchid	Priority 1		Pauline's Laughing Leek Orchid grows in black, peaty soils in swamps.	Highly Unlikely – not suitable habitat
<i>Thomasia multiflora</i>		Priority 1		<i>Thomasia multiflora</i> grows in black sand on seasonally wet areas, granite outcrops.	Highly Unlikely- not suitable habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
<i>Thomasia purpurea x solanacea</i>		Priority 1		<i>Thomasia purpurea x solanacea</i> grows in grey sand over limestone on creek sides.	Highly Unlikely- not suitable habitat
<i>Usnea pulvinata</i>		Priority 1		<i>Usnea pulvinata</i> grows in bare, moist brown shallow clay-loam near outcrop (Western Australian Herbarium, 2004).	Highly Unlikely – record from specimen and not suitable habitat
<i>Agrostocrinum scabrum</i> subsp. <i>littorale</i>		Priority 2		<i>Agrostocrinum scabrum</i> subsp. <i>littorale</i> occurs on shallow granite loams on coastal slopes.	Highly Unlikely – not suitable habitat
<i>Andersonia barbata</i>		Priority 2		<i>Andersonia barbata</i> occurs in white sand in swampy areas.	No – record in error outside of species range which is the Jarrah Forest Region
<i>Bossiaea</i> sp. Mt Frankland (L. Graham 2174)		Priority 2		<i>Bossiaea</i> sp. Mt Frankland is recorded in Karri forest (Western Australian Herbarium, 2020).	Highly Unlikely – not Karri habitat
<i>Caladenia startiorum</i>	Start's Spider Orchis	Priority 2		Start's Spider Orchis grows in clay loam on winter-wet swamps.	No – record in error outside of species range
<i>Calandrinia</i> sp. Torndirrup (S.D. Hopper et al. SDH 8712) PN		Priority 2		<i>Calandrinia</i> sp. Torndirrup is recorded from Torndirrup National Park in a grey sand / peat in a damp seep area.	Highly Unlikely – not suitable habitat
<i>Calectasia grandiflora</i>	Blue Tinsel Lily	Priority 2		Blue Tinsel Lily occurs in white, grey or yellow sand, sandy clay, gravel, laterite and granite in swampy areas, rock outcrops, flats, slopes and ridges.	Highly Unlikely – not suitable habitat
<i>Christella dentata</i>		Priority 2		<i>Christella dentata</i> grows in sandstone crevices, amongst sandstone rocks.	No – record in error – occurs in the Kimberley

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
<i>Conospermum quadripetalum</i>		Priority 2		<i>Conospermum quadripetalum</i> grows in sandy clay, grey sand on flats behind coastal hills.	Unlikely – not typical habitat
<i>Conospermum spectabile</i>		Priority 2		<i>Conospermum spectabile</i> occurs in sandy soils.	Unlikely – species occurs in the Stirling Ranges
<i>Cryptandra glabriflora</i>		Priority 2		<i>Cryptandra glabriflora</i> occurs in yellow or grey sand, gravelly soils on plains.	No – outside species range which is around Kalbarri
<i>Degelia flabellata</i>		Priority 2		<i>Degelia flabellata</i> is a lichen that grows on granite rocks.	Highly Unlikely – not granite rock habitat
<i>Euphrasia scabra</i>	Yellow Eye-bright	Priority 2		Yellow Eye-bright is recorded from brown clay loam (Western Australian Herbarium, 2004).	No – outside of species range and record of a specimen
<i>Gyrostemon thesioides</i>		Priority 2		<i>Gyrostemon thesioides</i> occurs in sand over limestone on consolidated coastal dunes.	Unlikely – No sand over limestone on site
<i>Hydrocotyle serendipita</i>	Albany Pennywort	Priority 2		Albany Pennywort grows in grey-black sand over granite, located along a steep slope, above what was formerly a densely vegetated gully prior to wildfire (Parkins and Dilly, 2017)	Highly Unlikely – not suitable habitat
<i>Leucopogon bracteolaris</i>		Priority 2		<i>Leucopogon bracteolaris</i> occurs in stony sand, gravelly loam.	Highly Unlikely – not suitable habitat
<i>Pterostylis heberlei</i>	Heberle's Bird Orchid	Priority 2		Heberle's Bird Orchid is recorded growing over laterite in Sheoak woodland (Australian National Herbarium, 1995).	Highly Unlikely – not suitable habitat
<i>Ricinocarpos tuberculatus</i>		Priority 2		<i>Ricinocarpos tuberculatus</i> grows in white/grey sand on coastal dunes.	No – record in error outside of species range
<i>Schoenus</i> sp. Grassy (E. Gude & J. Harvey 250)		Priority 2		<i>Schoenus</i> sp. Grassy (E. Gude & J. Harvey 250) grows in black silt on swamps.	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
<i>Stenanthemum sublineare</i>		Priority 2		<i>Stenanthemum sublineare</i> grows in littered white sand on coastal plain (Rye, 2001).	No – outside of species range and record of a specimen
<i>Stylidium articulatum</i>	Stout Triggerplant	Priority 2		Stout Triggerplant grows in sandy loam, granite on hills, coastal heath.	Unlikely -not typical habitat
<i>Stylidium falcatum</i>	Slender Beaked Triggerplant	Priority 2		Slender Beaked Triggerplant occurs in sand, gravelly clay loam on plains, lateritic ridges.	Highly Unlikely – not suitable habitat
<i>Thelymitra porphyrosticta</i>	Southern Queen of Sheba	Priority 2		Southern Queen of Sheba occurs on margins of swamps and moist valleys (Jeanes, 2009).	Highly Unlikely – not suitable habitat
<i>Styphelia cymbiformis</i>		Priority 2		<i>Styphelia cymbiformis</i> grows in white/grey or yellow sand, lateritic gravelly soils on sandplains, wet flats, foothills.	No – record is a specimen outside species range
<i>Styphelia multiflora</i>		Priority 2		<i>Styphelia multiflora</i> grows in white/grey sand on rocky slopes, coastal sand dunes, amongst quartzite or granite rocks.	No – record is a specimen outside species range
<i>Warnstorfia fluitans</i>	Floating Hook Moss	Priority 2		Floating Hook Moss grows in nutrient-poor, base-poor, still water (Royal Botanic Garden Edinburgh, 2017).	No – no permanent water habitat
<i>Acacia ataxiphylla</i> subsp. <i>ataxiphylla</i>		Priority 3		<i>Acacia ataxiphylla</i> subsp. <i>ataxiphylla</i> grows in gravelly clay loam, white/grey sand on flats, roadsides.	Highly Unlikely – not suitable habitat
<i>Acacia horridula</i>		Priority 3		<i>Acacia horridula</i> grows in gravelly soils over granite, sand on rocky hillsides.	No – record is a specimen outside species range

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
<i>Amanita drummondii</i>	Drummond's Grisette	Priority 3		Drummond's Grisette is solitary to gregarious in leaf litter in association with <i>Agonis flexuosa</i> , <i>A. theiformis</i> , <i>Allocasuarina fraseriana</i> , <i>Corymbia calophylla</i> , <i>Eucalyptus marginata</i> , <i>E. patens</i> , <i>E. staeri</i> , <i>Jacksonia furcellata</i> , <i>Kunzea glabrescens</i> , <i>Melaleuca sp.</i> , <i>Podocarpus drouynianus</i> , <i>Taxandria parviceps</i> (Davidson <i>et al.</i> , 2015) growing in sandy soil (Amanitaceae Org, 2015).	No – record is a specimen and outside species range
<i>Amanita preissii</i>	Cinnamon-ring Lepidella	Priority 3		Cinnamon-ring Lepidella is found under shrubs and Eucalyptus in West Australia (Amanitaceae Org, 2015) in sandy soil and lateritic gravel, associated with <i>Allocasuarina fraseriana</i> , <i>Acacia pulchella</i> , <i>Corymbia calophylla</i> , <i>Callitris sp.</i> , <i>Eucalyptus gomphocephala</i> , <i>E. marginata</i> , <i>Macrozamia fraseri</i> and <i>Pinus pinaster</i> (Davidson <i>et al.</i> , 2017).	No – record is a specimen and outside species range
<i>Andersonia auriculata</i>		Priority 3		<i>Andersonia auriculata</i> grows in grey or peaty sand, often over laterite in swampy areas, granite outcrops.	Highly Unlikely – not suitable habitat
<i>Andersonia setifolia</i>		Priority 3		<i>Andersonia setifolia</i> grows in sandy and gravelly soils on hillslopes and breakaways.	Highly Unlikely – not suitable habitat
<i>Angianthus drummondii</i>		Priority 3		<i>Angianthus drummondii</i> grows in grey or brown clay soils, ironstone on seasonally wet flats.	No – record is a specimen and outside species range
<i>Austrostipa mundula</i>	Neat Spear Grass	Priority 3		Neat Spear Grass occurs on plains in grey sand (Western Australian Herbarium, 2001) in coastal areas (Williams, 2022).	Possible – habitat may occur on the site
<i>Banksia biterax</i>		Priority 3		<i>Banksia biterax</i> grows in sand with lateritic gravel.	Highly Unlikely – not lateritic habitat
<i>Boronia anceps</i>		Priority 3		<i>Boronia anceps</i> grows in white sand, gravelly laterite on seasonally swampy heaths.	No – record is a specimen and outside species range

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
<i>Boronia crassipes</i>		Priority 3		<i>Boronia crassipes</i> grows in sand, peaty sand on winter-wet swamps, creeklines.	Highly Unlikely – not suitable habitat
<i>Chorizema carinatum</i>		Priority 3		<i>Chorizema carinatum</i> occurs in sand, sandy clay.	Unlikely – not typical habitat
<i>Eucalyptus arborella</i>		Priority 3		<i>Eucalyptus arborella</i> grows in stony soils on rocky slopes and creeklines, breakaways.	No – record is a specimen and outside species range
<i>Juncus meianthus</i>		Priority 3		<i>Juncus meianthus</i> grows in black sand, sandy clay near creeks, seepage areas.	Highly Unlikely – not suitable habitat
<i>Lachnagrostis billardierei</i> subsp. <i>billardierei</i>		Priority 3		<i>Lachnagrostis billardierei</i> subsp. <i>billardierei</i> grows in sand over granite on hilltops.	Highly Unlikely – not suitable habitat
<i>Lasiopetalum monticola</i>		Priority 3		<i>Lasiopetalum monticola</i> occurs in rocky soils on steep slopes, gullies.	No – record is a specimen and outside species range
<i>Lasiopetalum</i> sp. Denmark (B.G. Hammersley 2012)		Priority 3		<i>Lasiopetalum</i> sp. Denmark grows in sand, sandy or gravelly loam on granite outcrops, slopes, lateritic ridges.	Highly Unlikely – not suitable habitat
<i>Lepyrodia heleocharoides</i>		Priority 3		<i>Lepyrodia heleocharoides</i> grows in moist peaty sand in dry or seasonally inundated heath or woodland, swamps.	Highly Unlikely – not suitable habitat
<i>Leucopogon alternifolius</i>		Priority 3		<i>Leucopogon alternifolius</i> grows in grey/white sand in swampy areas, seasonally wet areas.	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
<i>Leucopogon altissimus</i>		Priority 3		<i>Leucopogon altissimus</i> occurs in a variety of habitats including hilltops, where it occurs in and around dense heath in shallow soils over granite, but also low in the landscape close to creek lines and on winter damp flats, where it may be a prominent species in the understorey of Marri woodlands in gravelly loam soils. The species even appears as a component of the vegetation of the fore-dunes growing in white sand under <i>Agonis flexuosa</i> and <i>Spyridium globulosum</i> (Hislop, 2008).	Unlikely – not typical habitat
<i>Leucopogon apiculatus</i>		Priority 3		<i>Leucopogon apiculatus</i> grows in skeletal sandy or stony soils over quartzite or granite on granite outcrops and hills, quartzite ridges, rocky slopes.	No – record in error and outside of species range
<i>Poa billardierei</i>		Priority 3		<i>Poa billardierei</i> grows in sand on littoral sand and foredunes only.	Unlikely – Site does not continue to beach area
<i>Styphelia rotundifolius</i>		Priority 3		<i>Styphelia rotundifolius</i> grows in white-yellow sand, brown-yellow loam over clay, laterite on hills, plains, summits, disturbed sites.	No – record is a specimen and outside species range
<i>Synaphea preissii</i>		Priority 3		<i>Synaphea preissii</i> occurs in sand, gravelly loam.	Unlikely – not typical habitat
<i>Verticordia endlicheriana</i> var. <i>angustifolia</i>		Priority 3		<i>Verticordia endlicheriana</i> var. <i>angustifolia</i> grows in sandy clay on granite outcrops.	Highly Unlikely – not suitable habitat
<i>Adenanthos x cunninghamii</i>		Priority 4		<i>Adenanthos x cunninghamii</i> grows in grey sand on coastal dunes and sandplains.	Possible – habitat may occur on the site
<i>Asplenium decurrens</i>		Priority 4		<i>Asplenium decurrens</i> grows in white sandy soil over granite on steep valleys, pockets in granite gneiss.	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
<i>Banksia concinna</i>		Priority 4		<i>Banksia concinna</i> grows in rocky soils on mountain slopes.	No – record is a specimen and outside species range
<i>Banksia foliolata</i>		Priority 4		<i>Banksia foliolata</i> grows in sandy soils on rocky quartzitic slopes.	No – record in error and outside of species range
<i>Banksia seneciifolia</i>		Priority 4		<i>Banksia seneciifolia</i> grows in sandy loam, sand on rocky hillslopes.	Highly Unlikely – not suitable habitat
<i>Banksia serra</i>	Serrate-leaved Dryandra	Priority 4		Serrate-leaved Dryandra grows in gravel, sand or clay loam over laterite on hillslopes.	Highly Unlikely – not suitable habitat
<i>Corysanthes limpida</i>	Crystal Helmet Orchid	Priority 4		Crystal Helmet Orchid occurs in sand in coastal dunes.	Possible – habitat may occur in the eastern part of the site
<i>Drosera fimbriata</i>	Manypeaks Sundew	Priority 4		Manypeaks Sundew occurs in white sand with granite.	Highly Unlikely – not suitable habitat
<i>Eucalyptus x missilis</i>		Priority 4		<i>Eucalyptus x missilis</i> grows in sand over limestone or granite on coastal sites.	Unlikely – not typical habitat
<i>Gahnia sclerioides</i>		Priority 4		<i>Gahnia sclerioides</i> grows in loam, sandy soils in moist shaded situations.	Highly Unlikely – not suitable habitat
<i>Gonocarpus pusillus</i>		Priority 4		<i>Gonocarpus pusillus</i> grows in grey sandy clay on winter-wet swamps.	Highly Unlikely – not suitable habitat
<i>Hibbertia montana</i>		Priority 4		<i>Hibbertia montana</i> occurs in loam over granite, lateritic soils, gravel on granite rocks, lateritic ridges and boulders, hills.	No – record is a specimen and outside species range
<i>Kunzea pauciflora</i>		Priority 4		<i>Kunzea pauciflora</i> grows in gravelly sandy or loamy soils over limestone, sandstone or spongolite on hillsides, coastal slopes.	No – record is a specimen and outside species range

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
<i>Lepidium pseudotasmanicum</i>		Priority 4		<i>Lepidium pseudotasmanicum</i> occurs in loam, sand associated with granite.	Highly Unlikely – not suitable habitat
<i>Lysinema lasianthum</i>		Priority 4		<i>Lysinema lasianthum</i> occurs in swamps, seasonally wet areas.	Highly Unlikely – not suitable habitat
<i>Microtis quadrata</i>	South Coast Mignonette Orchid	Priority 4		South Coast Mignonette Orchid occurs on clay based coastal flats (Brown et al., 2013).	Highly Unlikely – not suitable habitat
<i>Myosotis australis</i> subsp. <i>australis</i>		Priority 4		<i>Myosotis australis</i> subsp. <i>australis</i> occurs in creekbeds.	Highly Unlikely – not suitable habitat
<i>Myriophyllum trifidum</i>	Three-lobed Meziella	Priority 4		Three-lobed Meziella grows in open grey sandy clay depressions on winter-wet flats.	No – record is a specimen and outside species range
<i>Pleurophascum occidentale</i>	Western Giant-leaved Moss	Priority 4		Western Giant-leaved Moss is known to occur in shallow soils on the edge of granite, deep white sand on laterite, sandy clay loam on sandstone, pink sand on sandstone as well as sandy soils some distance from granite outcrops (Brown <i>et al.</i> , 1998). It is generally associated with <i>Agonis flexuosa</i> and <i>Thryptomene saxicola</i> (Wyatt and Stoneburner, 1989).	Unlikely – not typical habitat
<i>Spyridium spadiceum</i>		Priority 4		<i>Spyridium spadiceum</i> grows in sand or gravelly loam on granitic hills.	Unlikely – not typical habitat
<i>Thomasia quercifolia</i>	Oak Leaved Thomasia	Priority 4		Oak Leaved Thomasia is recorded from grey sand on a slope in coastal dunes (Western Australian Herbarium, 1993).	Possible – habitat may occur on the site
<i>Thomasia solanacea</i>		Priority 4		<i>Thomasia solanacea</i> grows in alluvium, sand over limestone, rocky loam in coastal areas.	Unlikely – habitat does not occur on site

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act	Habitat*	Likelihood to occur on the site
<i>Thysanotus isantherus</i>		Priority 4		<i>Thysanotus isantherus</i> occurs with granite	Highly Unlikely – not granitic habitat

### 4.1.3 TEC/PEC Database Searches

Table 3 outlines the State and Commonwealth listed TECs and PECs that have been recorded in the vicinity of the site (Appendix 4).

**Table 3: Recorded Threatened and Priority Ecological Communities**

Name	Ecological Community	Conservation Status WA	Status under the EPBC Act
<i>Banksia coccinea</i> thicket	<i>Banksia coccinea</i> Shrubland/ <i>Eucalyptus staeri</i> /Sheoak Open Woodland (Community 14a - Sandiford & Barrett 2010)(all/or portion in EPBC listed Kwongkan community)	Priority 1	Endangered
<i>Melaleuca striata</i> / <i>Banksia</i> spp Coastal Heath	<i>Melaleuca striata</i> / <i>Banksia</i> spp Coastal Heath (all/or portion in EPBC listed Kwongkan community)	Priority 1	Endangered
Coastal <i>Melaleuca incana</i> / <i>Taxandria juniperina</i>	Coastal <i>Melaleuca incana</i> / <i>Taxandria juniperina</i> Shrubland/Closed Forest	Priority 1	
<i>Banksia littoralis</i> / <i>Melaleuca incana</i>	<i>Banksia littoralis</i> woodland / <i>Melaleuca incana</i> Shrubland	Priority 1	
<i>Astartea scoparia</i> Swamp Thicket	<i>Astartea scoparia</i> Swamp Thicket	Priority 1	
Coastal Saltmarsh	Subtropical and Temperate Coastal Saltmarsh	Priority 3	Vulnerable

## 4.2 Flora

A total of 101 plant species were recorded during the flora survey (Appendix 6). The total consisted of 92 native species and 9 (9%) introduced species.

The plant Families with the highest representation of species were the Cyperaceae (Sedge family – 12 species, all native), Fabaceae (Wattle and Pea family – 10 species, including 9 native and one introduced), Proteaceae (Banksia family – 7 species, all native), Myrtaceae (Myrtle family – 6 species, all native) and Poaceae (Grass family – 6 species, 3 native and 3 introduced).

No Threatened or Priority species were recorded on the site.

Species richness in the ten quadrats ranged from 9-25 (av. 15.6). The average number of weeds in the ten quadrats was 0.2 (nine quadrats recorded no weeds, one quadrat recorded one weed species and one quadrat recorded two weed species) (Appendix 7). Sandiford and Barrett (2010) recorded an average of 10 species per 10m x 10m relevé in Peppermint Low Forest vegetation in their ARVS study.

## 4.3 Vegetation

### 4.3.1 Biogeographic Region

Biogeographic regions of Western Australia are defined in the Interim Biogeographical Regionalisation for Australia (IBRA) and are defined on the basis of climate, geology, landform, vegetation and fauna.

The site is located in the Jarrah Forest IBRA region (Southern Jarrah Forest subregion).

#### 4.3.2 Pre-European Vegetation Association

The Pre-European vegetation associations mapped on the site are:

Torndirrup\_22 which is described as *low woodland or open low woodland*, with *Acacia* spp., *Banksia* spp., *Agonis flexuosa*, *Callitris* spp., *Allocasuarina* spp., *Eucalyptus loxophleba* which is mapped over the main part of the proposed footprint; and

Torndirrup\_423 which is a mixed heath with scattered tall shrubs; *Acacia* spp., Proteaceae and Myrtaceae which is mapped on the access tracks and the southern edge of the site.

#### 4.3.3 Vegetation Types

Five vegetation types were described and mapped on the site (Figure 3). The three vegetation types in the eastern half of the site, including the resort area are all very similar, with the understorey species and structure of the main canopy changing slightly closer to the eastern coastline.

The two vegetation types on the western side of the site are wetland vegetation types and, although *Agonis flexuosa* is still the dominant tree species, the understorey is very different from the vegetation types on the eastern Quindalup sand dunes.

Only one quadrat was sampled from two vegetation types (AfAI and AfCI) that occurred next to the track due to the small area of occupancy. The AfAI vegetation type is very similar to the AfAs vegetation type from which four quadrats were sampled.

The vegetation types are described in Table 4. Quadrat Data are in Appendix 7.

Table 4: Vegetation Types on the Site

Vegetation Type	Description	Photograph
<p><b>AfBI</b> <i>Agonis flexuosa</i> Low Closed Forest over <i>Bossiaea linophylla</i>/<i>Hibbertia cuneiformis</i> Closed Heath</p>	<p>This vegetation type occurred in the central part of the site adjacent to the northern part of the Access Road and the western part of the resort site. <i>Agonis flexuosa</i> trees were 3-5m high and dense at 75-80% cover. Common understorey species included <i>Bossiaea linophylla</i>, <i>Hibbertia cuneiformis</i>, <i>Leucopogon obovatus</i> var. <i>revolutus</i>, <i>Spyridium globulosum</i>, <i>Anarthria scabrum</i>, <i>Cassytha racemosa</i> and <i>Drosera macrantha</i>.</p> <p>The northern section of this vegetation type sloped quite steeply down to <i>Banksia littoralis</i> dominated wetland vegetation that surrounds Lake Vancouver. Two <i>Banksia littoralis</i> trees occurred on the northern side of the track but were not abundant enough to map as a separate vegetation type.</p> <p>The soils are white to grey sand.</p> <p>Quadrats GB1, 5 and 7 are representative of this vegetation type.</p>	
<p><b>AfAs</b> <i>Agonis flexuosa</i>/<i>Spyridium globulosum</i>/<i>Adenanthos sericeus</i> Open Heath to Low Closed Forest</p>	<p>Occurs on the eastern part of the resort site. Similar to AfBI but with slightly shorter and less dense <i>Agonis flexuosa</i> trees, very little to no <i>Bossiaea linophylla</i> and the presence of <i>Adenanthos sericeus</i>. Other typical species included <i>Hibbertia cuneiformis</i>, <i>Drosera macrantha</i> and <i>Billardiera fusiformis</i>. <i>Lepidosperma gladiatum</i> was dense under the <i>Agonis flexuosa</i> trees in some low-lying swales.</p> <p>The soils are white to grey sand.</p> <p>Quadrats GB2, 3, 4 and 6 are representative of this vegetation type.</p>	

Vegetation Type	Description	Photograph
<p><b>AfAI</b> <i>Agonis flexuosa</i>/<i>Adenanthos sericeus</i>/<i>Bossiaea linophylla</i>/<i>Acacia littorea</i> Closed Heath</p>	<p>Occurs on the easternmost parts of the site closest to the coast. Very similar to the AfAs vegetation type but with several near-coastal species present including <i>Acacia littorea</i>, <i>Olearia axillaris</i> and <i>Scaevola nitida</i> present. The structure of the vegetation is lower than further inland with the <i>Agonis flexuosa</i> shrubs 2-2.5m high. <i>Caustis dioica</i> is a very common ground cover.</p> <p>The soils are white sand.</p> <p>Quadrat GB10 is representative of this vegetation type.</p>	
<p><b>AfAsc</b> <i>Agonis flexuosa</i> Low Closed Forest over <i>Astartea scoparia</i> Shrubland</p>	<p>This vegetation type occurred either side of the Access Road track at the western end of the site. <i>Agonis flexuosa</i> trees are up to 4m high and dense, at around 75%. <i>Astartea scoparia</i> was a common tall shrub to 2m. The wetland rush <i>Machaerina preissii</i> was common. Other wetland indicator species included <i>Lepidosperma effusum</i>, <i>Kunzea recurva</i>, <i>Adenanthos obovatus</i> and <i>Acacia hastulata</i>.</p> <p>The soils are black, peaty sand and were waterlogged at the time of the survey.</p> <p>Quadrats GB8and 9 are representative of this vegetation type.</p>	

Vegetation Type	Description	Photograph
<p><b>AfCI</b> <i>Agonis flexuosa/Callistachys lanceolata</i> Low Closed Forest over <i>Leptocarpus scariosus</i> Sedgeland</p>	<p>This wetland vegetation type occurred at the southern end of the proposed Access Road. <i>Callistachys lanceolata</i> trees were up to 6m high and <i>Agonis flexuosa</i> 4m high. Other wetland species included <i>Logania vaginalis</i>, <i>Leptocarpus scariosus</i>, <i>Lepidosperma effusum</i>, <i>Machaerina preissii</i> and <i>Astartea scoparia</i>.</p> <p>The soils are black, peaty sand and were inundated at the time of the survey.</p> <p>Quadrats GB11 is representative of this vegetation type.</p>	

#### 4.3.4 Vegetation Condition

The condition of the vegetation was assessed according to the system devised by Keighery and described in Bush Forever (Government of Western Australia, 2000) (Table 5).

**Table 5: Vegetation Condition Rating Scale.**

Condition	Description
Pristine	Pristine or nearly so, no obvious signs of disturbance.
Excellent	Vegetation structure intact, disturbance affecting individual species and weeds are non-aggressive species.
Very Good	Vegetation structure altered, obvious signs of disturbance. For example, disturbance to vegetation structure caused by repeated fires, the presence of some more aggressive weeds, dieback, logging and grazing.
Good	Vegetation structure significantly altered by very obvious signs of multiple disturbance. Retains basic vegetation structure or ability to regenerate it. For example, disturbance to vegetation structure caused by very frequent fires, the presence of some very aggressive weeds at high density, partial clearing, dieback and grazing.
Degraded	Basic vegetation structure severely impacted by disturbance. Scope for regeneration but not to a state approaching good condition without intensive management. For example, disturbance to vegetation structure caused by very frequent fires, the presence of very aggressive weeds, partial clearing, dieback and grazing.
Completely Degraded	The structure of the vegetation is no longer intact and the area is completely or almost completely without native species. These are often described as 'parkland cleared' with the flora comprising weed or crop species with isolated native trees or shrubs.

Source: Government of Western Australia, 2000.

The vegetation condition throughout the site was rated as Excellent with very few weed species and no areas with weeds in abundance. The presence of cleared tracks and some weeds in the survey area prevented the site from being assessed as Pristine.

## 4.4 Conservation Significance of Flora and Vegetation

### 4.4.1 Flora

No Threatened or Priority species were recorded on the site or are expected to occur in any other season.

The one Threatened flora species identified in the database search as potentially occurring on the site was *Calectasia cyanea*. This assessment was made on the basis that the species habitat includes white and grey sand, both of which occur on the site. However, the Conservation Advice for *Calectasia cyanea* states that the species grows in heathland in association with *Allocasuarina humilis*, *Banksia grandis*, *Adenanthos cuneatus*, *Hakea ruscifolia* and *Melaleuca thymoides*. None of the vegetation types on the grey and white sand on the site are remotely similar to this vegetation type. *Calectasia cyanea* therefore is considered highly unlikely to occur on the site and no further survey is required to confirm this.

#### 4.4.2 Vegetation Association

The area remaining of the Beard vegetation associations is outlined in Table 6 (DBCAs, 2014).

**Table 6: Vegetation Association Statistics**

Vegetation Association	Pre-European Extent	Remaining		Remaining in Secure Tenure	
	Area (ha)	Area (ha)	%	Area (ha)	%
Torndirrup_22	834.97	629.65	75.41	138.41	16.58
Torndirrup_423	14,526.43	11,522.92	79.32	4,037.06	27.79

The percentage remaining is above EPA's 30% minimum criteria for vegetation complexes.

#### 4.4.3 Threatened and Priority Ecological Communities

The vegetation on the site does not meet the description of any of the TECs and PECs identified in the database search (Table 3). The *Agonis flexuosa* Low Closed Forest over *Astartea scoparia* Shrubland is superficially similar to the *Astartea scoparia* Swamp Thicket Priority Ecological Community with the presence of *Astartea scoparia* as a common shrub species, however the *Astartea scoparia* Swamp Thicket ecological community does not have a canopy of trees such as *Agonis flexuosa* and several other wetland species indicative of this community such as *Taxandria juniperina* are absent from the site.

The site is just outside the boundary of the land included in the Albany Regional Vegetation Survey (ARVS)(Sandiford and Barrett, 2010). However, the land immediately north of the site was included and allows the extrapolation of the ARVS results to the site. The ARVS maps the vegetation north of the site as a mosaic between Peppermint Low Forest and Coastal Heath. Based on the description of these vegetation units PGV Environmental considers that the three vegetation types on the eastern side half of the site meets the description of the Peppermint Low Forest vegetation unit in the ARVS (unit 2) which is:

“A dense canopy of *Agonis flexuosa* (Peppermint) is characteristic of this unit with the structure varying from a closed heath on exposed coastal slopes to a low closed forest in swales with the shrub species often sub or co-dominant in exposed areas. A tall shrubland of *Spyridium globulosum*, *Adenanthos sericeus*, *Bossiaea linophylla* and *Leucopogon obovatus* is usually present over an open or closed sedgeland with *Rhagodia baccata*, *Hardenbergia comptoniana* and *Clematis pubescens* common”.

The Peppermint Low Forest vegetation unit is common along the south west coastline in the ARVS although areas with *Adenanthos sericeus* in the understorey (sub-unit 2a) were restricted to areas around Albany (Sandiford and Barrett, 2010).

The wetland vegetation type containing *Astartea scoparia* along the western track on the site is similar to the *Astartea scoparia* Swamp Thicket unit in the ARVS, however that unit does not contain *Agonis flexuosa* as a dominant tree species and some other tall shrubs typically associated with this unit such as *Taxandria juniperina* and *Melaleuca preissiana* do not occur on the site.

The small area of *Agonis flexuosa/Callistachys lanceolata* Low Closed Forest over *Leptocarpus scariosus* Sedgeland wetland vegetation is most similar to the *Callistachys* spp Thicket vegetation unit in the ARVS. The *Callistachys* spp Thicket vegetation unit occurs in small patches but was relatively widespread in the ARVS survey area (Sandiford and Barrett, 2010).

Sandiford and Barrett (2010) assessed the conservation and reservation status of the ARVS vegetation units based on a wide range of criteria. They considered the Peppermint Low Forest unit had conservation significance as being located on Coastal Dunes as well as occurring at the eastern range limit of this unit on the south coast. However, Sandiford and Barrett (2010) reported that the Peppermint Low Forest unit was “common on a local scale given its widespread distribution within West Cape Howe National Park and areas of Torndirrup National Park that were outside ARVS survey area. According to Table 3.2 of the ARVS, a total of 1232ha of the Peppermint Low Forest unit occurred in the ARVS survey area in 2010. Of this, 281ha (or 22.8%) occurred in IUCN conservation reserves, 619ha (50.2%) in other Crown Reserves and the remaining 332ha (26.9%) unreserved. The vegetation unit therefore has 73% in reserved land within the ARVS survey area.

Both the *Astartea scoparia* Swamp Heath and *Callistachys* Thicket were assessed as having conservation significance for several criteria including that they are both wetland vegetation types. Very little (36ha) of the *Callistachys* Thicket was mapped in the ARVS survey area, of which 13ha (34.5%) was unreserved.

The vegetation unit *Astartea scoparia* Swamp Thicket is too dissimilar to the wetland vegetation on the site to assess the amount of hectares remaining and in reserves.

## 5 SUMMARY

---

The Flora and Vegetation Survey of the footprint for the proposed Resort development, subject to the Flora and Vegetation Survey found the following:

- A total of 101 plant species were recorded on the site. The total consisted of 92 native species and 9 (9%) introduced species.
- No Threatened or Priority flora species were recorded on the site or are expected to occur in any other season;
- Five vegetation types were described and mapped on the site; three similar *Agonis flexuosa*-dominated vegetation types on sand dunes and two wetland vegetation types along the western Access Road;
- The condition of the native vegetation was assessed as Excellent throughout the site;
- The site is within the Jarrah Forest IBRA region (Southern Jarrah Forest subregion);
- The vegetation is part of Beard vegetation association Torndirrup 22 and Torndirrup 423. There is approximately 75.4% and 79.3% of the pre-European extent of vegetation association remaining, respectively. The percentage remaining is above EPA's 30% minimum criteria for vegetation complexes; and
- None of the vegetation types is a Threatened or Priority Ecological Community. The vegetation on coastal sand dunes is representative of the Peppermint Low Forest vegetation unit of the Albany Regional Vegetation Survey. The Peppermint Low Forest was recorded as common along the south coast in the ARVS survey area with 73% of the 1232ha in reserved land within the ARVS survey area; and
- Approximately 260m of the proposed Access Road, starting from the intersection with La Perouse Road and heading north contains wetland vegetation either side of the cleared track. The first 50m of the proposed road was inundated to almost 0.5m during the flora and vegetation survey and the section to the north waterlogged. The current track would need to be filled to ensure the access road is usable year-round. Constructing the road to the required standards may require the clearing of wetland vegetation either side or on one side of the current track. Where possible, the clearing of wetland vegetation should be avoided.

the Environment and Water

# EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 09-Jan-2024

[Summary](#)

[Details](#)

[Matters of NES](#)

[Other Matters Protected by the EPBC Act](#)

[Extra Information](#)

[Caveat](#)

[Acknowledgements](#)

# Summary

## Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the [Administrative Guidelines on Significance](#).

<a href="#">World Heritage Properties:</a>	None
<a href="#">National Heritage Places:</a>	None
<a href="#">Wetlands of International Importance (Ramsar)</a>	None
<a href="#">Great Barrier Reef Marine Park:</a>	None
<a href="#">Commonwealth Marine Area:</a>	None
<a href="#">Listed Threatened Ecological Communities:</a>	1
<a href="#">Listed Threatened Species:</a>	67
<a href="#">Listed Migratory Species:</a>	64

## Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at <https://www.dcceew.gov.au/parks-heritage/heritage>

A [permit](#) may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

# Details

## Matters of National Environmental Significance

### Listed Threatened Ecological Communities

[\[ Resource Information \]](#)

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Status of Vulnerable, Disallowed and Ineligible are not MNES under the EPBC Act.

Community Name	Threatened Category	Presence Text	Buffer Status
<a href="#">Empodisma peatlands of southwestern Australia</a>	Endangered	Community likely to occur within area	In feature area

### Listed Threatened Species

[\[ Resource Information \]](#)

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.

Number is the current name ID.

Scientific Name	Threatened Category	Presence Text	Buffer Status
<b>BIRD</b>			
<a href="#">Ardenna grisea</a> Sooty Shearwater [82651]	Vulnerable	Species or species habitat may occur within area	In feature area
<a href="#">Arenaria interpres</a> Ruddy Turnstone [872]	Vulnerable	Roosting known to occur within area	In buffer area only
<a href="#">Botaurus poiciloptilus</a> Australasian Bittern [1001]	Endangered	Species or species habitat likely to occur within area	In feature area
<a href="#">Calidris acuminata</a> Sharp-tailed Sandpiper [874]	Vulnerable	Roosting known to occur within area	In feature area
<a href="#">Calidris canutus</a> Red Knot, Knot [855]	Vulnerable	Species or species habitat known to occur within area	In feature area
<a href="#">Calidris ferruginea</a> Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
<a href="#">Calidris tenuirostris</a> Great Knot [862]	Vulnerable	Roosting known to occur within area	In buffer area only
<a href="#">Calyptorhynchus banksii naso</a> Forest Red-tailed Black-Cockatoo, Karrak [67034]	Vulnerable	Species or species habitat likely to occur within area	In feature area
<a href="#">Cereopsis novaehollandiae grisea</a> Cape Barren Goose (south-western), Recherche Cape Barren Goose [25978]	Vulnerable	Species or species habitat known to occur within area	In feature area
<a href="#">Charadrius leschenaultii</a> Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat likely to occur within area	In feature area
<a href="#">Charadrius mongolus</a> Lesser Sand Plover, Mongolian Plover [879]	Endangered	Roosting known to occur within area	In buffer area only
<a href="#">Dasyornis longirostris</a> Western Bristlebird [515]	Endangered	Species or species habitat likely to occur within area	In feature area
<a href="#">Diomedea antipodensis</a> Antipodean Albatross [64458]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area
<a href="#">Diomedea dabbenena</a> Tristan Albatross [66471]	Endangered	Species or species habitat may occur within area	In feature area
<a href="#">Diomedea epomophora</a> Southern Royal Albatross [89221]	Vulnerable	Species or species habitat may occur within area	In feature area
<a href="#">Diomedea exulans</a> Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area
<a href="#">Diomedea sanfordi</a> Northern Royal Albatross [64456]	Endangered	Species or species habitat may occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
<a href="#">Falco hypoleucos</a> Grey Falcon [929]	Vulnerable	Species or species habitat may occur within area	In feature area
<a href="#">Halobaena caerulea</a> Blue Petrel [1059]	Vulnerable	Species or species habitat may occur within area	In buffer area only
<a href="#">Limosa lapponica menzbieri</a> Northern Siberian Bar-tailed Godwit, Russkoye Bar-tailed Godwit [86432]	Endangered	Species or species habitat known to occur within area	In feature area
<a href="#">Limosa limosa</a> Black-tailed Godwit [845]	Endangered	Roosting known to occur within area	In buffer area only
<a href="#">Macronectes giganteus</a> Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area	In feature area
<a href="#">Macronectes halli</a> Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area
<a href="#">Numenius madagascariensis</a> Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area	In feature area
<a href="#">Pachyptila turtur subantarctica</a> Fairy Prion (southern) [64445]	Vulnerable	Species or species habitat likely to occur within area	In feature area
<a href="#">Phaethon rubricauda westralis</a> Red-tailed Tropicbird (Indian Ocean), Indian Ocean Red-tailed Tropicbird [91824]	Endangered	Species or species habitat may occur within area	In feature area
<a href="#">Phoebastria fusca</a> Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area	In buffer area only
<a href="#">Pluvialis squatarola</a> Grey Plover [865]	Vulnerable	Roosting known to occur within area	In buffer area only

Scientific Name	Threatened Category	Presence Text	Buffer Status
<a href="#">Pterodroma mollis</a> Soft-plumaged Petrel [1036]	Vulnerable	Species or species habitat may occur within area	In buffer area only
<a href="#">Sternula nereis nereis</a> Australian Fairy Tern [82950]	Vulnerable	Foraging, feeding or related behaviour known to occur within area	In feature area
<a href="#">Thalassarche carteri</a> Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area	In feature area
<a href="#">Thalassarche cauta</a> Shy Albatross [89224]	Endangered	Foraging, feeding or related behaviour likely to occur within area	In feature area
<a href="#">Thalassarche impavida</a> Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area	In feature area
<a href="#">Thalassarche melanophris</a> Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In feature area
<a href="#">Thalassarche steadi</a> White-capped Albatross [64462]	Vulnerable	Species or species habitat may occur within area	In feature area
<a href="#">Tringa nebularia</a> Common Greenshank, Greenshank [832]	Endangered	Species or species habitat known to occur within area	In buffer area only
<a href="#">Xenus cinereus</a> Terek Sandpiper [59300]	Vulnerable	Roosting known to occur within area	In buffer area only
<a href="#">Zanda baudinii listed as Calyptorhynchus baudinii</a> Baudin's Cockatoo, Baudin's Black-Cockatoo, Long-billed Black-cockatoo [87736]	Endangered	Breeding known to occur within area	In feature area
<a href="#">Zanda latirostris listed as Calyptorhynchus latirostris</a> Carnaby's Black Cockatoo, Short-billed Black-cockatoo [87737]	Endangered	Species or species habitat known to occur within area	In feature area

<a href="#">Megaptera novaeangliae</a> Humpback Whale [38]	Migration (north)	Known to occur	In feature area

# Caveat

## 1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

## 2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data are available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance

## 3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions

## 4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

# **APPENDIX 5**

## **Conservation Codes**

## Conservation Codes for Western Australian Flora and Fauna

Threatened, Extinct and Specially Protected fauna or flora are species which have been adequately searched for and are deemed to be, in the wild, threatened, extinct or in need of special protection, and have been gazetted as such.

***The lists of Threatened, Extinct and Specially Protected species are listed under Part 2 of the Biodiversity Conservation Act 2016.***

Categories of Threatened, Extinct and Specially Protected fauna and flora are:

### **T Threatened species**

Listed by order of the Minister as Threatened in the category of critically endangered, endangered or vulnerable under section 19(1), or is a rediscovered species to be regarded as threatened species under section 26(2) of the *Biodiversity Conservation Act 2016* (BC Act).

***Threatened fauna*** is the species of fauna that are listed as critically endangered, endangered or vulnerable threatened species.

***Threatened flora*** is the species of flora that are listed as critically endangered, endangered or vulnerable threatened species.

The assessment of the conservation status of threatened species is in accordance with the BC Act listing criteria and the requirements of Ministerial Guideline (Number 1) and Ministerial Guideline (Number 2) that adopts the use of the International Union for Conservation of Nature (IUCN) Red List of Threatened Species Categories and Criteria 4, and is based on the national distribution of the species.

### **CR Critically endangered species**

Threatened species considered to be *“facing an extremely high risk of extinction in the wild in the immediate future, as determined in accordance with criteria set out in the ministerial guidelines”*.

Listed as critically endangered under section 19(1)(a) of the BC Act in accordance with the criteria set out in section 20 and the ministerial guidelines.

### **EN Endangered species**

Threatened species considered to be *“facing a very high risk of extinction in the wild in the near future, as determined in accordance with criteria set out in the ministerial guidelines”*.

Listed as endangered under section 19(1)(b) of the BC Act in accordance with the criteria set out in section 21 and the ministerial guidelines.

### **VU Vulnerable species**

Threatened species considered to be *“facing a high risk of extinction in the wild in the medium-term future, as determined in accordance with criteria set out in the ministerial guidelines”*.

Listed as vulnerable under section 19(1)(c) of the BC Act in accordance with the criteria set out in section 22 and the ministerial guidelines.

### **Extinct Species**

#### **EX Presumed extinct species**

Species where “*there is no reasonable doubt that the last member of the species has died*”, and listing is otherwise in accordance with the ministerial guidelines (section 24 of the BC Act).

#### **EW Extinct in the wild species**

Species that “*is known only to survive in cultivation, in captivity or as a naturalised population well outside its past range; and it has not been recorded in its known habitat or expected habitat, at appropriate seasons, anywhere in its past range, despite surveys over a time frame appropriate to its life cycle and form*”, and listing is otherwise in accordance with the ministerial guidelines (section 25 of the BC Act).

Currently there are no threatened fauna or threatened flora species listed as extinct in the wild. If listing of a species as extinct in the wild occurs, then a schedule will be added to the applicable notice.

### **Specially protected species**

Listed by order of the Minister as specially protected under section 13(1) of the BC Act. Meeting one or more of the following categories: species of special conservation interest; migratory species; cetaceans; species subject to international agreement; or species otherwise in need of special protection.

Species that are listed as threatened species (critically endangered, endangered or vulnerable) or extinct species under the BC Act cannot also be listed as Specially Protected species.

#### **MI Migratory species**

Fauna that periodically or occasionally visit Australia or an external Territory or the exclusive economic zone; or the species is subject of an international agreement that relates to the protection of migratory species and that binds the Commonwealth; and listing is otherwise in accordance with the ministerial guidelines (section 15 of the BC Act).

Includes birds that are subject to an agreement between the government of Australia and the governments of Japan (JAMBA), China (CAMBA) and The Republic of Korea (ROKAMBA), and fauna subject to the Convention on the Conservation of Migratory Species of Wild Animals (Bonn Convention), an environmental treaty under the United Nations Environment Program. Migratory species listed under the BC Act are a subset of the migratory animals, that are known to visit Western Australia, protected under the international agreements or treaties, excluding species that are listed as Threatened species.

**CD Species of special conservation interest (conservation dependent fauna)**

Fauna of special conservation need being species dependent on ongoing conservation intervention to prevent it becoming eligible for listing as threatened, and listing is otherwise in accordance with the ministerial guidelines (section 14 of the BC Act).

Currently only fauna are listed as species of special conservation interest.

**OS Other specially protected species**

Fauna otherwise in need of special protection to ensure their conservation, and listing is otherwise in accordance with the ministerial guidelines (section 18 of the BC Act).

Currently only fauna are listed as species otherwise in need of special protection.

**P Priority species**

Priority is not a listing category under the BC Act.

All fauna and flora are protected in WA following the provisions in Part 10 of the BC Act. The protection applies even when a species is not listed as threatened or specially protected, and regardless of land tenure (State managed land (Crown land), private land, or Commonwealth land).

Species that may possibly be threatened species that do not meet the criteria for listing under the BC Act because of insufficient survey or are otherwise data deficient, are added to the Priority Fauna or Priority Flora Lists under Priorities 1, 2 or 3. These three categories are ranked in order of prioritisation for survey and evaluation of conservation status so that consideration can be given to potential listing as threatened.

Species that are adequately known, meet criteria for near threatened, or are rare but not threatened, or that have been recently removed from the threatened species list or conservation dependent or other specially protected fauna lists for other than taxonomic reasons, are placed in Priority 4. These species require regular monitoring.

Assessment of priority status is based on the Western Australian distribution of the species, unless the distribution in WA is part of a contiguous population extending into adjacent States, as defined by the known spread of locations.

**Priority 1: Poorly-known species**

Species that are known from one or a few locations (generally five or less) which are potentially at risk. All occurrences are either: very small; or on lands not managed for conservation, for example, agricultural or pastoral lands, urban areas, road and rail reserves, gravel reserves and active mineral leases; or otherwise under threat of habitat destruction or degradation.

Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements for threatened listing and appear to be under immediate threat from known threatening processes. These species are in urgent need of further survey.

### **Priority 2: Poorly-known species**

Species that are known from one or a few locations (generally five or less), some of which are on lands managed primarily for nature conservation, for example, national parks, conservation parks, nature reserves and other lands with secure tenure being managed for conservation.

Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements for threatened listing and appear to be under threat from known threatening processes. These species are in urgent need of further survey.

### **Priority 3: Poorly-known species**

Species that are known from several locations and the species does not appear to be under imminent threat or from few but widespread locations with either large population size or significant remaining areas of apparently suitable habitat, much of it not under imminent threat.

Species may be included if they are comparatively well known from several locations but do not meet adequacy of survey requirements and known threatening processes exist that could affect them. These species need further survey.

### **Priority 4: Rare, Near Threatened and other species in need of monitoring**

- (a) Rare. Species that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection but could be if present circumstances change. These species are usually represented on conservation lands.
- (b) Near Threatened. Species that are considered to have been adequately surveyed and that are close to qualifying for vulnerable but are not listed as a conservation dependent specially protected species.
- (c) Species that have been removed from the list of threatened species or lists of conservation dependent or other specially protected species, during the past five years for reasons other than taxonomy.
- (d) Other species in need of monitoring.

## **Western Australian Ecological Communities**

### **Threatened Ecological Communities**

The BC Act provides for the statutory listing of threatened ecological communities (TECs) by the Minister.

### **Presumed Totally Destroyed (PD)**

An ecological community that has been adequately searched for but for which no representative occurrences have been located. The community has been found to be totally

destroyed or so extensively modified throughout its range that no occurrence of it is likely to recover its species composition and/or structure in the foreseeable future.

### **Critically Endangered (CR)**

An ecological community that has been adequately surveyed and found to have been subject to a major contraction in area and/or that was originally of limited distribution and is facing severe modification or destruction throughout its range in the immediate future, or is already severely degraded throughout its range but capable of being substantially restored or rehabilitated.

### **Endangered (EN)**

An ecological community that has been adequately surveyed and found to have been subject to a major contraction in area and/or was originally of limited distribution and is in danger of significant modification throughout its range or severe modification or destruction over most of its range in the near future.

### **Vulnerable (VU)**

An ecological community that has been adequately surveyed and is found to be declining and/or has declined in distribution and/or condition and whose ultimate security has not yet been assured and/or a community that is still widespread but is believed likely to move into a category of higher threat in the near future if threatening processes continue or begin operating throughout its range.

### **Priority Ecological Communities**

Possible threatened ecological communities that do not meet survey criteria or that are not adequately defined are added to the Priority Ecological Community List under priorities 1, 2 and 3. These three categories are ranked in order of priority for survey and/or definition of the community. Ecological communities that are adequately known, and are rare but not threatened or meet criteria for Near Threatened, or that have been recently removed from the threatened list, are placed in Priority 4. These ecological communities require regular monitoring. Conservation Dependent ecological communities are placed in Priority 5.

### **Priority One: Poorly-known ecological communities**

Ecological communities that are known from very few occurrences with a very restricted distribution (generally  $\leq 5$  occurrences or a total area of  $\leq 100$ ha).

Occurrences are believed to be under threat either due to limited extent, or being on lands under immediate threat (e.g. within agricultural or pastoral lands, urban areas, active mineral leases) or for which current threats exist. May include communities with occurrences on protected lands. Communities may be included if they are comparatively well-known from one or more localities but do not meet adequacy of survey requirements, and/or are not well defined, and appear to be under immediate threat from known threatening processes across their range.

### **Priority Two: Poorly-known ecological communities**

Communities that are known from few occurrences with a restricted distribution (generally  $\leq 10$  occurrences or a total area of  $\leq 200$ ha). At least some occurrences are not believed to be under immediate threat (within approximately 10 years) of destruction or degradation. Communities may be included if they are comparatively well known from one or more localities but do not meet adequacy of survey requirements, and/or are not well defined, and appear to be under threat from known threatening processes.

### **Priority Three: Poorly known ecological communities**

- (i) Communities that are known from several to many occurrences, a significant number or area of which are not under threat of habitat destruction or degradation or:
- (ii) communities known from a few widespread occurrences, which are either large or with significant remaining areas of habitat in which other occurrences may occur, much of it not under imminent threat (within approximately 10 years), or;
- (iii) munities made up of large, and/or widespread occurrences, that may or may not be represented in the reserve system, but are under threat of modification across much of their range from processes such as grazing by domestic and/or feral stock, inappropriate fire regimes, clearing, hydrological change etc.

Communities may be included if they are comparatively well known from several localities but do not meet adequacy of survey requirements and/or are not well defined, and known threatening processes exist that could affect them.

### **Priority Four: Ecological communities that are adequately known, rare but not threatened or meet criteria for Near Threatened, or that have been recently removed from the threatened list. These communities require regular monitoring.**

- (i) Rare. Ecological communities known from few occurrences that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection, but could be if present circumstances change. These communities are usually represented on conservation lands.
- (ii) Near Threatened. Ecological communities that are considered to have been adequately surveyed and that do not qualify for Conservation Dependent, but that are close to qualifying for a higher threat category.
- (iii) Ecological communities that have been removed from the list of threatened communities during the past five years.

### **Priority Five: Conservation Dependent ecological communities**

Ecological communities that are not threatened but are subject to a specific conservation program, the cessation of which would result in the community becoming threatened within five years.

# Commonwealth of Australia Conservation Codes

## Threatened Flora and Fauna

Threatened fauna and flora may be listed under Section 178 of the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) in any one of the following six categories:

### **Extinct**

A native species is eligible to be included in the extinct category at a particular time if, at that time, there is no reasonable doubt that the last member of the species has died.

### **Extinct in the wild**

A native species is eligible to be included in the extinct in the wild category at a particular time if, at that time:

- a) it is known only to survive in cultivation, in captivity or as a naturalised population well outside its past range; or
- b) it has not been recorded in its known and/or expected habitat, at appropriate seasons, anywhere in its past range, despite exhaustive surveys over a time frame appropriate to its life cycle and form.

### **Critically endangered**

A taxon is Critically Endangered when the best available evidence indicates that it meets any of the five criteria for the category identified in Part 7.01 of the EPBC Regulations, and it is therefore considered to be facing an extremely high risk of extinction in the wild.

### **Endangered**

A taxon is Endangered when the best available evidence indicates that it meets any of the five criteria for the category identified in Part 7.01 of the EPBC Regulations, and it is therefore considered to be facing a very high risk of extinction in the wild.

### **Vulnerable**

A taxon is Vulnerable when the best available evidence indicates that it meets any of the five criteria for the category identified in Part 7.01 of the EPBC Regulations, and it is therefore considered to be facing a high risk of extinction in the wild.

### **Conservation dependent**

A native species is eligible to be included in the conservation dependent category at a particular time if, at that time:

- a) the species is the focus of a specific conservation program the cessation of which would result in the species becoming vulnerable, endangered or critically endangered; or
- b) the following subparagraphs are satisfied:
  - i. the species is a species of fish;

- ii. the species is the focus of a plan of management that provides for management actions necessary to stop the decline of, and support the recovery of, the species so that its chances of long term survival in nature are maximised;
- iii. the plan of management is in force under a law of the Commonwealth or of a State or Territory;
- iv. cessation of the plan of management would adversely affect the conservation status of the species.

The EPBC Act does not provide for listing in a data deficient category. Where sufficient data (evidence) is unavailable to allow assessment by the Threatened Species Scientific Committee against the criteria for listing, the species are found to be ineligible. A recommendation is made to the Minister to not include the species in any category under the EPBC Act. For reasons of transparency and to inform future research, the Threatened Species Scientific Committee publishes the names of those species found to be data deficient. As data deficient is not a listing category under the EPBC Act, this has no statutory implications and the species is not considered to be listed under the EPBC Act.

### **Threatened Ecological Communities**

Threatened Ecological communities under the EPBC Act are listed in three categories.

#### **Critically endangered**

If, at that time, an ecological community is facing an extremely high risk of extinction in the wild in the immediate future (indicative timeframe being the next 10 years).

#### **Endangered**

If, at that time, an ecological community is not critically endangered but is facing a very high risk of extinction in the wild in the near future (indicative timeframe being the next 20 years).

#### **Vulnerable**

If, at that time, an ecological community is not critically endangered or endangered, but is facing a high risk of extinction in the wild in the medium-term future (indicative timeframe being the next 50 years).
